1. Introduction

1.1. Purpose

The purpose of this document is to provide a description of all the DRCU units' electrical interfaces. Along with the DRCU Mechanical ICD this document shall allow a complete overview of the DRCU units in terms of interfaces. This document will be useful when performing unit test, integration or qualification by containing all the DRCU electrical interfaces (this avoids the need for multiple documents).

1.2. Scope

The scope of this document includes all the DRCU units external interfaces low-level description including electrical and low level protocol and connector pin-out. However in the case of the analog interfaces with FPU the description is limited to pin-out since these interfaces are already described in respective sub-system ICDs.

1.3. Reference Documents

1.5. Interfaces cross-matrix

This table lists the interface types against the SPIRE sub-assembly for the HSDCU and HSFCU units.

Unit	Interface Types	Interfaces with:
HSDCU	Electrical – Digital	DPU
	Electrical – Analog	FPU
	Mechanical	S/C
	Thermal	S/C
HSFCU	Electrical – Digital	DPU
	Electrical – Analog	FPU
	Electrical - Power	S/C DCU
	Mechanical	S/C
	Thermal	S/C

2. Thermo-mechanical Interfaces

2.1. Mechanical interfaces

2.1.1. HSDCU unit

Assuming the HSDCU unit occupies a rectangular volume defined by its surface, its height and its mass can summarize the mechanical interface:

- 490 mm x 285 mm
- 305 mm
- 15.67 kg

Mounting on the S/C is done by means of 12 feet and fastening by means of 12 M4 screws.

For a fully detailed mechanical interface description refers to the figure 2.-a.

2.1.2. HSFCU unit

Assuming the HSFCU unit occupies a rectangular volume defined by its surface, its height and its mass can summarize the mechanical interface:

- 370 mm x 325 mm
- 336 mm
- 15.28 kg

Mounting on the S/C is done by means of 12 feet and fastening by means of 12 M4 screws.

For a fully detailed mechanical interface description refers to the figure 2.-b.

2.2. Thermal interfaces

2.2.1. HSDCU unit

The thermal is defined by the dissipated power by the unit and the parameters, which define the heat exchange (by radiation and conduction) with its environment.

The parameters for heat exchange dimensioning are:

Dissipated Power (W)	Radiation Surfaces	Surfaces Emissivity	Contact Surfaces
33.2 - Photometer 16.0 - Spectrometer	See §2.1.1	> 0.85	28180 mm ²

2.2.2. HSFCU unit

The thermal is defined by the dissipated power by the unit and the parameters, which define the heat exchange (by radiation and conduction) with its environment.

The parameters for heat exchange dimensioning are:

Dissipated Power (W)	Radiation Surfaces	Surfaces Emissivity	Contact Surfaces
47.6 - Photometer 40.3 - Spectrometer	See §2.1.2	> 0.85	100655 mm ²

Figure 2.-b FCU mechanical ICD

3. Electrical interfaces with S/C

Electrical interfaces with the S/C are limited to primary power distribution. It corresponds to a main and redundant interface between the PCDU ports and the DRCU power supply modules (PSU).

3.1. PCDU interface

3.1.1. Electrical characteristics

The following table gives a summary of this interface:

Connector Id(s)	HS_FCU_J05 HS_FCU_J06
Pin number(s)	2, 7
Interface type	Input
Signal type	DC voltage
Voltage range (nominal)	26 to 29 V
Voltage range (operating)	0 to 35 V
Maximum Power (average)	80.8 W
Current range	See Power Profile §3.1.2
Reference pin(s) (return line)	4, 8
Corresponding command(s)	NA
Source impedance ¹	< 200 mΩ for f < 1kHz ≤ 50 Ω for f > 1MHz

- Average power is estimated according to definition from AD1 §5.9.5.6.1.
- For further dynamic performance refer to AD1 §5.9.5.

3.1.2. Power profile

Mode	Power Consumption (W)	Comment
Observing Photometer (average)	80.8	Nominal operation
Observing Spectrometer (average)	56.3	Nominal operation
Recycling (SCU on only)	34.51 (tbc)	Nominal operation
Stand-by (SCU on only)	33.88 (tbc)	Nominal operation
MCU boot	38.34 (tbc)	DRCU power on (INIT mode)

¹ See LISN characteristics (AD1 §9.5.6.9) for detailed description

4. Interface with FPU

The DRCU units interface with the FPU by means of a large number of analog interfaces. Those interfaces are related to the detector, mechanism, cooler, calibrators and thermometer sub-systems respectively.

4.1. DCU interface

4.1.1. Seeing Bolometer Bias Interface

The bolometer bias interface consists of 5 individual balanced ports has described here after.

7. Appendix – DRCU Sub-system interconnections

7.1. PSU to DCU interface

This interface concerns exclusively secondary power lines distribution to the DCU electronics. This interface corresponds to the external routing of power lines from the PSU module to the DCU box. No other interface is identified between these to sub-systems.

Unit : DCU (Main)
 Sub-unit/Module : DCU_BP
