

Dear All,

SPIRE-RAL-COM-000980

Here is a rough drawing I have made from information John Coker gave me on Monday. It is very rough, so is not to be taken as the absolute source of truth.¹ The inside vertices of the detector box polygon should be considered as being correct. I have offset these lines nominally five millimetres to indicate a nominal wall thickness.

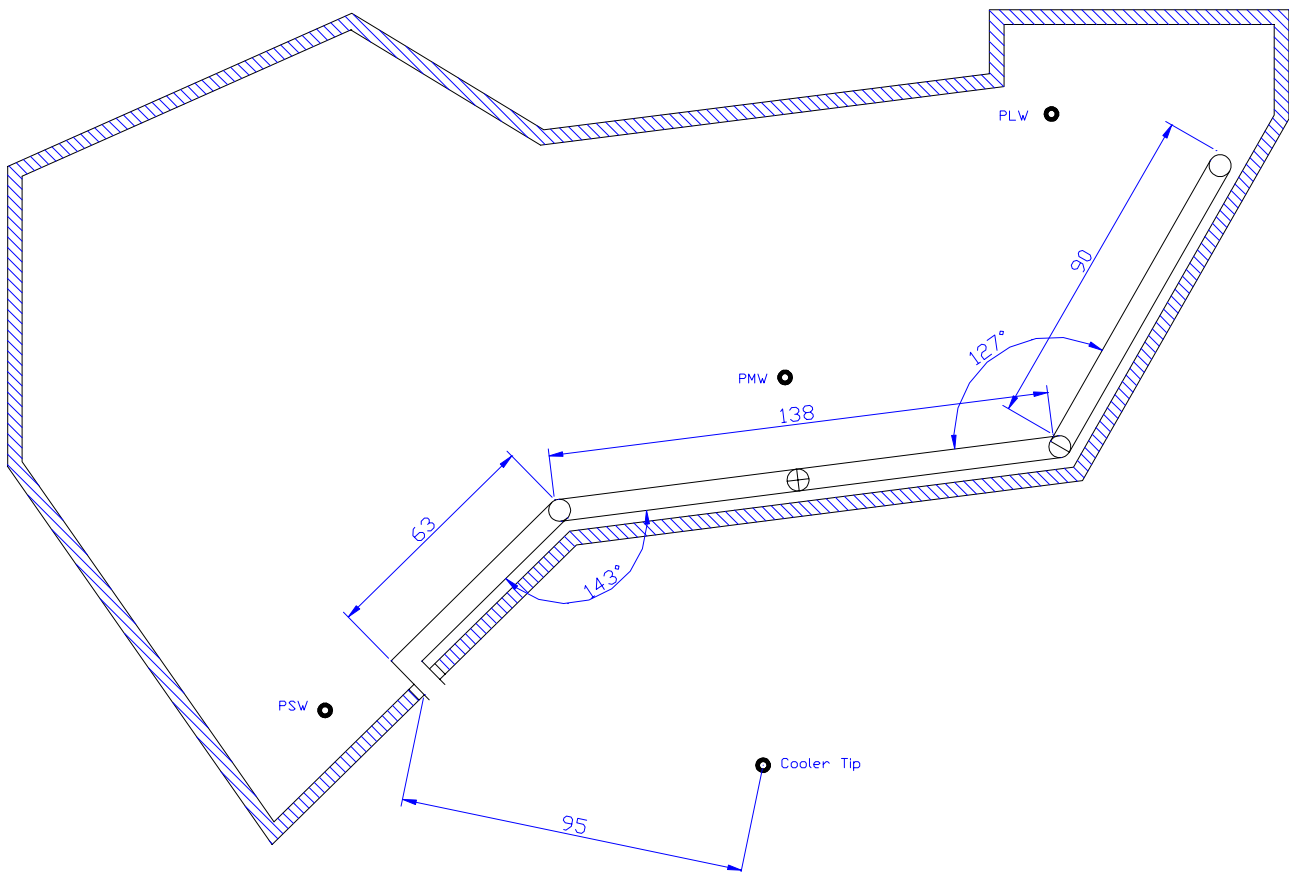

We have a telecon planned for Monday afternoon. I am hoping to have it at the end of the regular project managers telecon which starts at 4:00pm. I hope we can start the 300-mK telecon (without hanging up) at around 4:30.

Items for discussion include:

- Comments on proposal for Detector box mock-up. Details to follow.
- Updates on progress of candidate solutions
- Preparation for meeting at RAL, Monday 15 October.
- AOB

Cheers,

Doug
Friday 5 October, 2001.

¹ I was confused by the coordinates in the other direction so I left them out of the drawing. John (Berend/Chris), what would be a typical thickness for the box? What would be the typical height of the box above the SOB? (Just very rough estimates please).
