Dear instruments PI's, PM's,

You must have received a series of Change Request issued by Alcatel (reference documents) addressing the IID-A. As normal work, you are requested to agree with the proposed changes. This implies that you provide to ESA a response including your analysis of the impact of the change to your instruments. This shall allow ESA project Configuration Control Board to perform an assesment leading to the approval or rejection of the change request.

The above referred CR's are part of the critical path for reaching a signed version 2.1 of the IID's, so we recommend your prompt response to these. A few more may be

submitted for your agreement in the coming week. From there on, we shall expect regular CR's as normal work.

In order to facilitate the CCB processing of these CR's, I would appreciate that you forward your response to me within one week of receipt. Please provide a signed version by Fax, together with electronic version.

Best regards,

G. Crone
Herschel Planck Payload Manager

A handwritten signature in black ink, appearing to read 'G. Crone', is written over a horizontal line. The signature is cursive and somewhat stylized.
