Change Record

ISSUE	DATE	
Issue 1.0 Draft 1	15 th January 2002	Original Draft
Issue 1.0 Draft 2	15 th January 2003	<p>Updated Draft for DPU AVM Acceptance Test</p> <p>Section 1.1: Updated Scope description</p> <p>Section 1.3.2: Updated document references and added RD08</p> <p>Section 2.1.3: Added note about TIME contents</p> <p>Section 2.2: Renamed APID5</p> <p>Section 2.3: included details of which parts of the 1553 interface protocol are used</p> <p>Section 3.1: Updated Telecommand service usage</p> <p>Section 3.2.3: Defined both Housekeeping and Diagnostic reports. There are now 4 of each with 2 housekeeping and 1 diagnostic report pre-defined in the OBS</p> <p>Section 3.2.3.1: Updated definition of service (3,1) to send Table_ID as a parameter. This allows different SIDs for the same Table_ID</p> <p>Section 3.2.3.2: Service (3,2) set to Not Used</p> <p>Section 3.2.3.3: Service (3,3) now defined</p> <p>Section 3.2.3.4: Service (3,4) set to Not Used</p> <p>Section 3.2.3.5: Service (3,9) now defined</p> <p>Section 3.2.3.6: Service (3,11) set to Not Used</p> <p>Section 3.2.6.1: Memory addressing changed to use 8 bit Memory ID and 24 bit address</p> <p>Section 3.2.6.2: Memory addressing changed to use 8 bit Memory ID and 24 bit address</p> <p>Section 3.2.6.3: Memory addressing changed to use 8 bit Memory ID and 24 bit address</p> <p>Section 3.2.8.1.2-4: Deleted Cooler, SCAL and 300mk control commands – they are now implemented in software-driven VMs</p> <p>Section 3.2.8.2.2-4: Deleted Cooler, SCAL and 300mk control commands – they are now implemented in software-driven VMs</p> <p>Section 3.2.8.3.1: Changed Load_Table command to Set_Table, with consequent changes to parameters</p> <p>Section 3.2.8.3.2: Changed parameters</p> <p>Section 3.2.8.3.3: Changed parameters</p> <p>Section 3.2.8.3.6: Inserted commands to start and stop software-driven VMs</p> <p>Section 3.2.8.3.20: Deleted data packing command – data frames are packed into science packets until they are full (unless a flush command is received)</p> <p>Section 3.2.9.1: Change to packet definition to all Ack field to be changed</p> <p>Section 3.2.14.1: Service (14,1) now defined</p> <p>Section 3.2.14.2: Service (14,2) now defined</p> <p>Section 3.2.14.3: Service (14,3) now defined</p> <p>Section 3.2.17.1: Updated command description</p> <p>Section 3.2.20.4: This telecommand is no longer used – OTF and TSF provided by ground processing</p> <p>Section 3.2.22: Context Service not used</p> <p>Section 4.1: table updated to reflect changes to services</p> <p>Section 4.2.1.6: Updates Error code table</p> <p>Section 4.2.3.2: Added Critical Housekeeping Report definition</p> <p>Section 4.2.3.3: Updated Nominal Housekeeping Report definition</p> <p>Section 4.2.3.4: Added Detector Housekeeping Report definition</p> <p>Section 4.2.5.1: Removed OTF and TSF reports and added definition</p>

		<p>of report identified so far Section 4.2.5.2: Added definition of reports Section 4.3.5.3: Removed Error/Alarm report definition – they are not used as the ground does not remain in contact with the spacecraft Section 4.2.6: Defined Memory Dump reports Section 4.2.8: defined Function Activity Report Section 4.2.14: Defined Packet Generation Status Report Section 4.2.17: Defined Link connection Report Section 4.2.21: Science Data packet definition updated Section 4.2.22: Context Saving Service not used Section 5.1.1: Updated TC Parameter List Section 5.1.3: Updated TC Parameter Constraints</p> <p>Added commands to select science data Added Appendix D - description of science data processing</p>
<p>Issue 1.1 Draft 1</p>	<p>31st July 2003</p>	<p>Version issued for CQM Testing. This Version corresponds to the version 1.0 of the DRCU ICD. Section 1.3.1: Added IID-Part A to Applicable Documents Section 3.2.8.1: Added Launch Latch function to follow required implementation of arm-fire procedure for critical commands Added Booting Function Section 3.2.8.2: Added Launch Latch function to follow required implementation of arm-fire procedure for critical commands Added Booting Function Section 3.2.8.3: Added commands to engage/release Launch Latch Added Load_TC_and_Boot command Modified Force_Boot command Function and Activity IDs Defined Selection commands Section 3.2.20: Removed use of Information Distribution Service, 20 Section 4.1: Removed Diagnostic Housekeeping packets from table Section 4.2.1.2.1: Updated TM(1,2) error message format to conform to new PS_ICD Section 4.2.1.2.2: Added Packet Content Error code for Illegal Function and Activity IDs Section 4.2.1.6: Removed Illegal Function and Activity ID errors from the TC Failure report – they are now reported as TC Acceptance Failures Section 4.2.3.1: Removed Detector Housekeeping report from table Section 4.2.3.2: Updated Critical Housekeeping Report table to reflect Issue 1.0 of DRCU ICD Section 4.2.3.3: Updated Nominal Housekeeping Report table to reflect Issue 1.0 of the DRCU ICD Section 4.2.3.4: Deleted Detector Housekeeping Report – offsets are no longer able to be read as housekeeping parameters and can be obtained via a science data report Section 4.2.5.1: Updated event report format to conform to AD01 Updated DPU error packets to conform to User Manual description Section 4.2.5.1.2: Updated Peak-up Report format to comply with agreed interface (to be included in IID-A) Section 4.2.5.2: Updated to reflect new format for event packets in AD01 and consolidated TM(5,2) event packets into one format Added Boot ROM Telemetry event packet Section 4.2.5.3: updated to include all BOOT SW generated telemetry packets (ref RD10) Section 4.2.7: Defined Function Activity Reports Section 4.2.14: Modified format to conform to AD01</p>

		<p>Section 4.2.16: Added Time to test service TM(17,2) packet</p> <p>Section 4.2.20: Removed use of Information Distribution Service, 20</p> <p>Section 4.2.21.1.3: Updated contents of SMEC Block</p> <p>Section 4.2.21.1.4: Updated contents of BSM Block</p> <p>Section 4.2.21.1.5: Defined contents of SCU Block</p> <p>Section 4.2.21.3: Defined New Test Pattern Blocks</p> <p>Defined MCU Engineering Block</p> <p>Appendix D: Replaced with Pixel Maps</p>
Issue 1.1 Draft 2	10 th August 2003	<p>Section 3.1: Removed HSK packet definition commands from Table</p> <p>Section 3.2.3: Removed HSK packet definition commands from Service 3 (moved to Service 8)</p> <p>Section 3.2.8.1.11: Added HSK Function</p> <p>Section 3.2.8.1.11: Added HSK Function</p> <p>Section 3.2.8.3: Added HSK packet definition commands</p> <p>Section 3.2.8.3.31 & 32: updated Selection commands to use SELECTID</p> <p>Section 4.2.1.6: modified TM(1,8) error codes for housekeeping packet definition commands</p> <p>Section 4.1.5.1.6: Updated Frame ID Error event packet –removed spare parameter</p> <p>Section 4.1.5.1.7: Updated Frame Length Error event packet</p> <p>Section 4.2.5.1.16: Added new event for TC counter error</p> <p>Section 4.2.21.1.3: Modified SMEC Block to contain full frame. This Is doen to be consistant with the use of selected data for SMEC operations</p> <p>Section 4.2.21.1.6: Defined DPU Blocks</p> <p>Section 4.2.21.2.6: Defined Selected Data Block, including adding normal SMEC data block</p> <p>Section 4.2.21.3.11: Added Transparent Data Block definition</p> <p>Section 4.2.21.4: Added Housekeeping Packet Definition Report</p> <p>Section 4.2.21.4.3: Added Housekeeping Packet Definition Report Parameters</p> <p>Section 4.2.21.4.4: Added Table Report Parameters</p>
Issue 1.1 Draft 3	13 th August 2003	<p>Updated TM(8,4) section to conform to AD01 – added SID to commands</p>
Issue 1.1 Draft 4		<p>All TC Sections: Changed commands names to be identical to the short description in the MIB</p> <p>Section 3.1: Removed all service 12 TCs from table – this is handled with TC(8,4) commands</p> <p>Section 3.2.6: Added Boot S/W Memory ID = 4 for dumping and checking memory</p> <p>Section 3.2.6.1: noted maximum rate of sending Memory Load commands</p> <p>Section 3.2.8.3.4: added Garbage Collection command</p> <p>Section 3.2.8.3.7: corrected length field</p> <p>Section 3.2.8.3.9: corrected length field</p> <p>Section 3.2.8.3.11: corrected length field</p> <p>Section 3.2.8.3.13: corrected length field</p> <p>Section 3.2.8.3.14: corrected length field</p> <p>Section 3.2.8.3.15: corrected length field</p> <p>Section 3.2.8.3.16: Added possible Peak-up Mode definition</p> <p>Section 3.2.8.3.17: corrected length field</p> <p>Section 3.2.8.3.18: corrected length field</p> <p>Section 3.2.8.3.19: corrected length field</p> <p>Section 3.2.8.3.20: corrected length field</p> <p>Section 3.2.8.3.21: corrected length field</p> <p>Section 3.2.8.3.22: corrected length field</p> <p>Section 3.2.8.3.23: corrected length field</p>

		<p>Section 3.2.8.3.24: corrected length field Section 3.2.8.3.25: corrected length field Section 3.2.8.3.26: corrected length field Section 3.2.8.3.27: corrected length field Section 3.2.8.3.28: corrected length field Section 3.2.8.3.29: corrected length field Section 3.2.8.3.30: corrected length field Section 3.2.8.3.31: Corrected length field Modified explanatory text, removed SELECTID from input parameters Section 3.2.8.3.32: Corrected length field Replaced SELECTID by FRAMEID in input parameters Section 3.2.8.3.33: corrected length field Section 3.2.8.3.34: corrected length field Section 3.2.8.3.35: corrected length field Section 3.2.8.3.36: corrected length field Section 3.2.12: Defined Service 12 as Not Used Section 3.2.14.1: Defined Packet ID as the parameter to select which packets are to be enabled Section 3.2.14.2: Defined Packet ID as the parameter to select which packets are to be disabled Section 4.1: Updated table to show TM(5,4) is used, TM(12, 9) is not used and TM(22,*) is not used Section 4.2.1.6: Deleted illegal Packet error from table as it referred to Service 20 , which is no longer used Section 4.2.3.1: Updated APID for Critical Housekeeping Packet Section 4.2.3.2: Added DPUSTAT to Critical HSK Section 4.2.3.3: Added SCU25V, SCUREF and SCUGND to HSK TM packet Increased LSLOAD length to 32 bits – compensated by removing DPU Spare Renumbered table entries Various further name changes Section 4.2.5.1.5: Modified TM packet to include full response from DRCU Section 4.2.5.1.9: Modified TM packet to include full response from DRCU plus the interface status Section 4.2.5.1.10: Modified TM packet to include the interface status Section 4.2.5.1.11: Modified TM packet SID Section 4.2.5.1.19: Added Out of Limits Event Packet Section 4.2.5.3: Updated Boot SW error Packets definitions Section 4.2.8.1: Added SID to TM Packet Section 4.2.8.1: Corrected Parameter Table Section 4.2.21.4: Added DPU Science Data Packet</p>
Issue 1.2j		<p>Section 2.2: Updated APIDs Section 3.2.3: Changed Housekeeping Packet IDs Section 3.2.8.3.32: Changed description of selection command, updated command error list Section 3.2.8.3.34: Added Error codes 0x0817 – 0x0819 Section 3.2.8.3.35: Added Error code 0x0829 Section 3.2.8.3.36: Added Error code 0x0829 Section 4.2.1.2.2: Deleted Failure code 5 (not sent in TM(1,2) but in TM(1,8) Section 4.2.1.6: Updated Error codes Section 4.2.3.2: Changed OBSVER parameter</p>

Project Document

SPIRE Data ICD

Ref: SPIRE-RAL-PRJ-001078

Issue: Issue 1.2j

Date: 2nd November 2004

1. INTRODUCTION

Control of the SPIRE instrument is handled by the Digital Processing Unit (DPU) part of the instrument electronics, which contains the On-Board Software (OBS). This unit is mounted on the spacecraft Service Module (SVM) and interfaces directly to the CDMS bus of the Herschel spacecraft for the purpose of transferring commands to, and collection of telemetry data from the instrument.

All data passing between the instrument and the spacecraft is transferred in the form of telemetry and telecommand packets conforming to the ESA packet standards (RD01 and RD02). The ESA Packet Utilisation Standard (RD03) defines the types of service that may be provided by units on board ESA spacecraft, but the set of supported packet types within the Herschel project is restricted. This restricted set is defined in the Herschel Packet Structure ICD (AD01) and is the minimum set necessary to meet the satellite operational requirements given in AD02.

Note: Items which are unclear from the documentation or are likely to be updated in the future are marked in blue text.

1.1 Scope

This document defines the packet types and their contents that will be accepted and generated by the SPIRE instrument during all operations. These packets conform to the formats given in the Packet Structure ICD (AD01) and the Ground Segment to Instruments ICD (AD03). They also provide for the instrument functionality described in the instrument Operating Modes document (RD04) and elaborated in the instrument operating document (RD04).

The document does not describe the use of the commands (to be given in the OBS User Manual) or the way in which the commands are handled by the OBS (to be found in the OBS Architectural Design document).

1.2 Structure of the Document

Section 2 describes the packet interface between the instrument and the spacecraft. This includes the general format of the packets used by the SPIRE instrument for telecommanding and telemetry (from AD01), the allocation of Application IDs used by the instrument and the functionality of the packet transfer protocol of the instrument/spacecraft interface (from AD01, appendix 9) that is used by the instrument.

Section 3 defines the format and content of each of the telecommand packets accepted by the instrument. Section 4 defines the corresponding information for the telemetry packets generated by the instrument. A description of how these packets are handled by the instrument is given in RD05.

Section 5 defines, in detail, the parameters used in the telecommand and telemetry packets.

1.3 Documents

1.3.1 Applicable Documents

- AD01 Herschel/Planck Packet Structure Interface Control Document. (SCI-PT-ICD-07527) Issue 3.0
- AD02 Herschel/Planck Operations Interface Requirements Document (SCI-PT-RS-07360), Issue 2.0 (draft3)
- AD03 Herschel Science Ground Segment to Instruments Interface Control Document (FIRST-FSC-DOC-0200), Issue 1.0
- AD04 Herschel/Planck Instrument Interface Document Part A (SCI-PT-IIDA-04624), Issue 3.0

1.3.2 Reference Documents

- RD01 Packet Telemetry Standard (ESA PSS-04-106), Issue 1, 1998
- RD02 Packet Telecommand Standard (ESA PSS-04-107), Issue 2, 1992
- RD03 Telemetry and Telecommand Packet Utilisation Standard (ECSS-E-70/41) Draft 04, April 1999
- RD04 Operating Modes of the SPIRE Instrument (SPIRE-RAL-PRJ-000320), Issue 3.0, 4th January 2002
- RD05 Operating the SPIRE Instrument (SPIRE-RAL-DOC-000768), Issue 0.4, 29th January 2002
- RD06 DRCU/DPU Interface Control Document (SAP-SPIRE-CCa-076-02) Issue 1.0, 14th February 2003
- RD07 MCU/DPU Command List Interface Control Document and User Manual (LAM/ELE/SPI/011011), Issue 3.0, 15th January 2003
- RD08 SPIRE On-Board Software User Manual (SPIRE-IFS-PRJ-001391)
- RD09 Herschel SPIRE DPU Hardware User Manual (SPIRE-IFS-PRJ-001390), Issue 1, 7th October 2002
- RD10 DPU Switch-On Procedure Telemetry Packets User Manual (DPU-MA-CGS-004), Issue: draft, 5th February 2003

2. THE PACKET INTERFACE

2.1 Packet Structures

The following packet structures are shown as a set of 16 bit words, contained in two consecutive octets in the packet structure (all packets are composed of an even number of octets). The most significant octet of each word comes before the least significant in the packet. The least significant bit of each word is on right of each field:

2.1.1 Fields

Within a field (of any length) the most significant bit is designated bit (0), the least significant bit is bit (length-1).

2.1.2 Telecommand Packets

The following figure gives the general structure of a SPIRE TC Packet (after AD01)

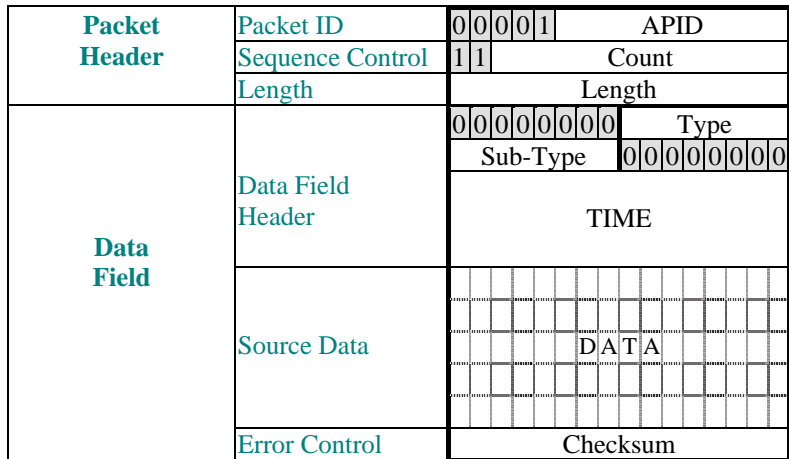

Packet Header	Packet ID	0 0 0 1 1	APID
	Sequence Control	1 1	Src
	Length	Count	
Data Field	Data Field Header	0 0 0 0	Ack
		1	Type
		Sub-Type	0 0 0 0 0 0 0 0
	Source Data	D A T A	
Error Control	Checksum		

Src, Count, Length, TIME and Checksum are defined in AD01
 Ack is the most significant 3 bits of Ack as defined in AD01
 Type and Sub-Type define the packet type and are also defined in AD01

2.1.3 Telemetry Packets

The following figure gives the general structure of a SPIRE TM Packet (after AD01)

Count, Length, TIME and Checksum are defined in AD01
 Type and Sub-Type define the packet type and are also defined in AD01

Note: the TIME field contains the DPU time of the construction of the packet, not the time of collection of the data.

2.2 APIDs

The Application ID is used to identify the source or destination of a telemetry packet. Herschel uses different APIDs for different types of packet (see AD1) as well as for different instruments. The APIDS to be used by SPIRE are given in the following table:

ID	Telemetry types	APID (hex)
APID1	SPIRE Telecommands, Telecommand Verification and Events	500
APID2	SPIRE Periodic Housekeeping	502
APID3	SPIRE Photometer Science Data	504
APID4	SPIRE Spectrometer Science Data	505 506
APID5	SPIRE Subsystem Science Data	506 508

2.3 Packet Transfer Protocol

At the low-level the Packet Transfer Protocol provides a series of sub-address messages to control and transfer data between subsystems. Some of these implement the packet transfer itself, others provide alternative methods of transferring data and controlling the transfer. This section identifies the sub-addresses used/accepted by the SPIRE instrument.

Description	Sub-address(es)	Comments
Mode Command	SA 0R	Used to identify the RT addressed in this subframe. The instrument responds only to its own address. For burst mode this is only set when the instrument has indicated that it has data to transfer
	SA 0T, 31T, 31R	Not Used
Unit Control	SA 1R	Not Used
	SA 1T	Contains Subframe counter and BIT word of 1553 i/f
Data Send	SA 2T, 3T, 4T, 7T, 9T, 29T	Not Used

Project Document

SPIRE Data ICD

Ref: SPIRE-RAL-PRJ-001078
Issue: Issue 1.2j
Date: 2nd November 2004
Page: 17 of 143

Data Receive	SA 2R, 7R, 9R, 15R-26R, 29R	Not Used
Asynchronous Short Commands	SA 3R, 4R	Not used
Event Messages	SA 5R, 5T, 6R, 6T	Not Used
Time Messages	SA 8T	Not used
	SA 8R	Used to transfer spacecraft time from CDMU to instrument (in subframe 33) rather than use packet service (9,5)
Packet Transfer	TM Transfer Request	SA 10T
	TM Transfer Confirmation	SA 10R
	TC Transfer Confirmation	SA 27T
	TC Transfer Descriptor	SA 27R
TM Data Send	SA 11T-26T	Used to transfer TM packets from instrument to CDMU
TC Data Receive	SA 11R-14R	Used to transfer TC packets from CDMU to instrument
Low-level Commands	SA 28T, 28R	Not Used
Data Wrap	SA 30T, 30R	Not Used by instrument, but made available for future use

3. SPIRE TELECOMMAND PACKETS

This section defines all the telecommand packets accepted by the SPIRE instrument

3.1 Telecommand Packet Types

The Packet Structure ICD (AD1) defines many types of service that can be provided by an Application. The following table shows the telecommand packet types that will be accepted by the SPIRE instrument.

Description	Service Type	Service Sub-Type	Comments
Telecommand Verification Service	1		N/A
Device Command Distribution	2		Not Used
Housekeeping and Diagnostic Data Reporting	3		Not Used
Event Reporting	5		N/A
Memory Management			
Load Memory Using Absolute Addresses	6	2	
Dump Memory Using Absolute Addresses	6	5	
Check Memory Using Absolute Addresses	6	9	
Function Management			
Start Function	8	1	
Stop Function	8	2	
Perform Activity of Function	8	4	
Report Function Status	8	5	
Time Management			
Synchronise User	9	3	Not Used
Enable Time Synchronisation	9	4	Not Used
Time Code	9	5	Not Used
Verify User Time	9	6	Not Used
Enable Time Verification	9	7	
Synchronise Central Time Reference	9	10	Not Used
On-Board Scheduling	11		Not Used
On-Board Monitoring	12		Not Used
Packet Transmission Control			
Enable Generation of Telemetry Packets	14	1	
Disable Generation of Telemetry Packets	14	2	
Report Enabled Telemetry Packets	14	3	
On-Board Storage and Retrieval	15		Not Used
On-Board Traffic Management	16		Not Used
Test Service			
Perform Connection Test	17	1	
On-Board Control procedures	18		Not Used
Action/Event Service	19		Not Used
Information Distribution Service	20		Not Used
Science Data	21		N/A
Context Saving Service	22		TBD

3.2 Telecommand Packet Definition

3.2.1 Telecommand Verification Service

Not Applicable

3.2.2 Device Command Distribution

Not Used

3.2.3 Housekeeping and Diagnostic Data Reporting

The periodic Housekeeping and Diagnostic Data is reported, at fixed time intervals, in packets with a fixed format. A maximum of 4 different reports are available for use at the same time, each allocated a different HK_Packet_ID, in the range 0 to 3. Associated with each HK_Packet_ID is a sampling interval and an on-board table, which contains the definition of the contents of the report.

The 4 reports are defined in the following way in the OBS by default:

Table with 5 columns: HK_Packet_ID, Report, Table_ID, Sampling Interval, HKSID. Rows include 0x300 (Critical Housekeeping Report), 0x301 (Nominal Housekeeping Report), 0x302 (--- Undefined ---), and 0x303 (--- Undefined ---).

The contents of each report are described in the Housekeeping Parameter Report (Services 3,25).

Maintenance of the housekeeping report is made using TM(8,4)

3.2.3.1 Define New Housekeeping Parameter Report (Service 3,1)

Not Used

3.2.3.2 Define New Diagnostic Parameter Report (Service 3,2)

Not Used

3.2.3.3 Clear Housekeeping Parameter Report Definitions (Service 3,3)

Not Used

3.2.3.4 Clear Diagnostic Parameter Report Definitions (Service 3,4)

Not Used

3.2.3.5 Report Housekeeping Parameter Report Definitions (Service 3,9)

Not Used

3.2.3.6 Report Diagnostic Parameter Report Definitions (Service 3,11)

Not Used

3.2.4

Not Available

3.2.5 Event Reporting

Not Applicable

3.2.6 Memory Management

These commands allow access to the contents of memory locations. Five ~~out~~ areas of memory have been identified, with the following MEMORYID:

0. Program Memory (RAM)
1. Data memory (RAM)
2. 1553 I/F DPRAM
3. EEPROM
4. Boot S/W PROM

When accessing memory the address is specified in terms of the number of Single Addressable Units (SAUs) from the start of the memory area. The SPIRE SAU is always 16bit words.

Note: This packet format does not strictly follow AD01 – The MEMORYID field is 8bits and the STARTADDR field is 24 bits.

3.2.6.1 Load Memory Using Absolute Addresses (Service 6,2): LOAD_MEMORY

This command should be sent at a maximum rate of 2 per second (unless TC verification is disabled).

0	0	0	1	1	APID1								
1	1	Src			Count								
Length													
0	0	0	0	Ack	1	0	0	0	0	0	1	1	0
0	0	0	0	0	1	0	0	0	0	0	0	0	0
MEMORYID				STARTADDR									
0				0				NSAU					
Data													
CRC													
Checksum													

Parameters

Name	Comments
MEMORYID	Memory Area to be addressed Value = 0 to 3 (cannot be 4)
STARTADDR	Start Address in SAUs
NSAU	Number of SAUs to be loaded
DATA	Data to be loaded
CRC	CRC Checksum of data field

Note: The DATA field will contain the words to be written into DPU memory. 48 or 32bit words will be split into 3 or 2 16bit words and written into the DATA field of the telecommand starting from the MSB.

Possible Errors

Error	TM Service	Error Code	Description
Illegal_Memory_ID	(1,8)	0x0601	Not a valid memory ID
Illegal_Start_Address	(1,8)	0x0602	Start address outside valid range
Illegal_Nsau	(1,8)	0x0603	Length will place data outside valid address range
Bad_Nsau	(1,8)	0x0604	Length does not agree with size of data field
Bad_CRC	(1,8)	0x0605	CRC in command does not agree with calculated checksum over data in command
Bad_Load	(1,8)	0x0606	CRC in command does not agree with calculated checksum over data in memory

Note: currently there are restrictions on which memory areas can be directly loaded. These are to be clarified

3.2.6.2 Dump Memory Using Absolute Addresses (Service 6,5): DUMP_MEMORY

Note: This packet format does not strictly follow AD01 – The MEMORYID field is 8bits and the STARTADDR field is 24 bits.

0	0	0	1	1	APID1
1	1	Src	Count		
Length = 11					
0	0	0	0	Ack	1
0	0	0	0	0	0
0	1	1	0	0	0
0	0	0	0	0	0
MEMORYID					
STARTADDR					
NSAU					
Checksum					

Parameters

Name	Value and Comments
MEMORYID	Memory Area to be addressed
STARTADDR	Start Address in SAUs
NSAU	Number of SAUs to be dumped

Possible Errors

Error	TM Service	Error Code	Description
Illegal_Memory_ID	(1,8)	0x0601	Not a valid memory ID
Illegal_Start_Address	(1,8)	0x0602	Start address outside valid range
Illegal_Nsau	(1,8)	0x0603	Length will read data outside valid address range

Note: currently there are restrictions on which memory areas can be directly dumped (for example the PROM cannot be dumped – only a copy of the PROM held in RAM). These are to be clarified

3.2.6.3 Check Memory Using Absolute Addresses (Service 6,9): CHECK_MEMORY

Note: This packet format does not strictly follow AD01 – The MEMORYID field is 8bits and the STARTADDR field is 24 bits.

0	0	0	1	1	APID1
1	1	Src	Count		
Length = 11					
0	0	0	0	Ack	1
0	0	0	0	0	0
0	1	1	0	0	0
0	0	0	0	0	0
MEMORYID					
STARTADDR					
NSAU					
Checksum					

Parameters

Name	Value and Comments
MEMORYID	Memory Area to be addressed
STARTADDR	Start Address in SAUs
NSAU	Number of SAUs to be checked

Possible Errors

Error	TM Service	Error Code	Description
Illegal_Memory_ID	(1,8)	0x0601	Not a valid memory ID
Illegal_Start_Address	(1,8)	0x0602	Start address outside valid range
Illegal_Nsau	(1,8)	0x0603	Length will read data outside valid address range

Page: 23 of 143

3.2.7

Not Available

3.2.8 Function Management

All command packets of this type may give rise to the following Errors:

Error	TM Service	Error Code	Description
Illegal_Function_ID	(1,2)	0x0801	Function_ID not known

3.2.8.1 Start Function (Service 8,1)

These commands allow functions that are not started automatically when the OBS runs to be started.

Possible Errors

In the event of being unable to complete the command the following reports shall be issued:

Error	TM Service	Error Code	Description
Function_Active	(1,8)	0x0830	The function is already active – command ignored

3.2.8.1.1 Function 0x01: Table Management

Always available - cannot be started

3.2.8.1.2 Function 0x02: Interrupt-driven VM

Always Available - cannot be started

3.2.8.1.3 Function 0x03: Software-driven VM1

Always Available - cannot be started

3.2.8.1.4 Function 0x04: Software-driven VM2

Always Available - cannot be started

3.2.8.1.5 Function 0x05: Software-driven VM3

Always Available - cannot be started

3.2.8.1.6 Function 0x10: ENABLE_SMEC_LATCH

This telecommand enables execution of the SMEC Launch Latch movement commands. If this function is not activated then commands to the SMEC launch latch will be rejected by the OBS.

0	0	0	1	1	APID1										
1	1	Src	Count												
Length =9															
0	0	0	0	0	0	1	0	0	0	0	1	0	0	0	0
0	0	0	0	0	0	0	1	0	0	0	0	0	0	0	0
FUNCTIONID		0000000000													
SID=0x0000															
Checksum															

Parameters

Name	Value and Comments
FUNCTIONID	0x10

3.2.8.1.7 Function 0x70: Booting

Always Available - cannot be started

3.2.8.1.8 Function 0xC0: Operations

Always Available - cannot be started

3.2.8.1.9 Function 0xC1: Observations

Always Available - cannot be started

3.2.8.1.10 Function 0xCA: DPU

Always Available - cannot be started

3.2.8.1.11 Function 0xCC: HSK

Always Available - cannot be started

3.2.8.2 Stop Function (Service 8,2)

These commands allow functions that are not started automatically when the OBS runs to be stopped

Possible Errors

In the event of being unable to complete the command the following reports shall be issued:

Error	TM Service	Error Code	Description
Function_Stopped	(1,8)	0x0831	The function is stopped – the command cannot be executed

3.2.8.2.1 Function 0x01: Table Management

Always available - cannot be stopped

3.2.8.2.2 Function 0x02: Interrupt-driven VM

Always Available - cannot be stopped

3.2.8.2.3 Function 0x03: Software-driven VM1

Always Available - cannot be stopped

3.2.8.2.4 Function 0x04: Software-driven VM2

Always Available - cannot be stopped

3.2.8.2.5 Function 0x05: Software-driven VM3

Always Available - cannot be stopped

3.2.8.2.6 Function 0x10: DISABLE_SMEC_LATCH

This telecommand disables execution of the SMEC Launch Latch movement commands. If this function is not activated then commands to the SMEC launch latch will be rejected by the OBS.

Note: normally this function is stopped automatically by execution of a Launch Latch command

Checksum														

Parameters

Name	Value and Comments
FUNCTIONID	0x10

3.2.8.2.7 Function 0x70: Booting

Always Available - cannot be stopped

3.2.8.2.8 Function 0xC0: Operations

Always Available - cannot be stopped

3.2.8.2.9 Function 0xC1: Observations

Always Available - cannot be stopped

3.2.8.2.10 Function 0xCA: DPU

Always Available - cannot be stopped

3.2.8.2.11 Function 0xCC: HSK

Always Available - cannot be stopped

3.2.8.3 Perform Activity of a Function (Service 8,4)

All command packets of this type and subtype may give rise to the following Errors:

Error	TM Service	Error Code	Description
Illegal_Function_ID	(1,2)	0x0801	Function_ID not known
Illegal_Activity_ID	(1,2)	0x0802	Activity_ID not known

3.2.8.3.1 Function 0x01 Table Management, Activity 0x01: SET_TABLE

This telecommand allocates space for a table. The previous space allocated to the table is lost.

000011	APID1
11 Src	Count
Length = 11	
000000001	0000010000
000000100	0000000000
FUNCTIONID	ACTIVITYID
SID=0x0001	
TABLEID	
TABLESIZE	
Checksum	

Parameters

Name	Value and Comments
FUNCTIONID	0x01
ACTIVITYID	0x01
SID	0x0001
TABLEID	
TABLESIZE	Number of 32 bit words allocated to table

Possible Errors

This telecommand shall be expected to issue a Telecommand Execution Report - Completed, TM(1,7) on successful completion. In the event of being unable to complete the command the following reports shall be issued:

Error	TM Service	Error Code	Description
Illegal_Table_ID	(1,8)	0x0805	Not a valid table ID
Table_Space_Full	(1,8)	0x0809	Not enough space available in DPU memory to create new table

3.2.8.3.2 Function 0x01 Table Management, Activity 0x02: REPORT_TABLE

Requests telemetry packets reporting the contents of a table starting with the word at offset INDEX (32 bit words) from the start of the table and reporting COUNT words. The contents are reported in as many TM(21,4) packets as necessary to complete the request.

0	0	0	1	1	APID1												
1	1	Src			Count												
Length = 13																	
0	0	0	0	0	0	0	0	1	0	0	0	0	1	0	0	0	0

SID=0x0002																	
TABLEID																	
INDEX																	
COUNT																	
Checksum																	

Parameter

Name	Value and Comments
FUNCTIONID	0x01
ACTIVITYID	0x02
SID	0x0002
TABLEID	
INDEX	Starting offset to first word to report
COUNT	Number of (32 bit) words to report

Possible Errors

Error	TM Service	Error Code	Description
Illegal_Table_ID	(1,8)	0x0805	Not a valid table ID
Illegal_Table_Index	(1,8)	0x0806	Index outside valid range
Table_Bounds_Error	(1,8)	0x080d	Not enough data available in the table to report COUNT words
Undefined_Table_Error	(1,8)	0x0811	Table is not defined

3.2.8.3.3 Function 0x01 Table Management, Activity 0x03: UPDATE_TABLE

This command is used to load data into a table. The table should have had sufficient space allocated previously using the Set_Table command

0	0	0	1	1						APID1						
1	1	Src								Count						
Length																
0	0	0	0	0	0	0	0	1	0	0	0	0	1	0	0	0

Data																
Checksum																

Parameters

Name	Value and Comments
FUNCTIONID	0x01
ACTIVITYID	0x03
SID	0x0003
TABLEID	
INDEX	Start location at which to place Data
N	Number of 32bit words to place in table
Data	N (32 bit) words to be placed in the table

Contents of the Data is dependant on the function of the table and will be specified by IFSI

Possible Errors

This telecommand shall be expected to issue a Telecommand Execution Report - Completed, TM(1,7) on successful completion. In the event of being unable to complete the command the following reports shall be issued:

Error	TM Service	Error Code	Description
Illegal_Table_ID	(1,8)	0x0805	Not a valid table ID
Illegal_Table_Index	(1,8)	0x0806	Index outside valid range
Table_Bounds_error	(1,8)	0x080d	Not enough space available in table to write new data
Bad_Data	(1,8)	0x0808	N does not agree with length of data field
Undefined_Table_Error	(1,8)	0x0811	Table is not defined

3.2.8.3.4 Function 0x01 Table Management, Activity 0x04: COLLECT_GARBAGE

This command is used to run the garbage collector.

Note: the garbage collector also runs automatically if the free contiguous space available for tables is less than 20% of the total available (To be Clarified)

0	0	0	1	1	APID1											
1	1	Src		Count

ACTIVITYID	0x09
SID	0x0000

3.2.8.3.32 Function 0xCA DPU, Activity 0x10: ENABLE_SELECTION

It may be necessary to reduce the instrument TM data rate (for example during parallel mode). To do this each possible science data frame can have a single associated selection (TBC).

Enable data selection from a science data frame. The DPU will use the contents of a table to define which words are extracted from the data frame into the telemetry packet (the table contains a list of the indexes set of flags indicating into the science frame of the data required – 0 = not selected, 1= selected). The data is transmitted in a Selected Data Packet, TM(21,2) with the SID identifying the data structure.

0	0	0	1	1	APID1

3.2.8.3.34 Function 0xCC HSK, Activity 0x01: DEFINE_NEW_HK_REPORT

This command is used to define/redefine housekeeping reports. The following procedure is used

1. An on-board table is loaded with the definition of the report using one or more 'Update_Table' commands. The format of the table contents is given in RD08.
2. An on-board table is loaded with monitoring information
3. A 'Define New Housekeeping Parameter Report' is used to associate the table containing the report definition and the corresponding monitoring table with a HK_Packet_ID, a sampling interval (in msec) and a structure ID (SID). In this case:

0	0	0	1	1	APID1								
1	1	Src	Count										
Length = 21													
0	0	0	0	Ack	1	0	0	0	0	1	0	0	0
0	0	0	0	0	1	0	0	0	0	0	0	0	0
FUNCTIONID					ACTIVITYID								
SID=0x0021													
HKPCKTID													
HKSID													
HKINTERVAL													
HKREPEAT													
TABLEID													
MONITOR_TABLEID													
Checksum													

Parameters

Name	Comments
FUNCTIONID	0xCC
ACTIVITYID	0x01
SID	0x0021
HKPCKTID	HK_Packet_ID, in range 0-3
HKSID	
HKINTERVAL	msec
HKREPEAT	Number of HK frames per packet = 1
MONITOR_TABLEID	Monitor Table_ID
TABLEID	Table_ID

Notes:

In order to redefine a report, the report must first be 'cleared' using a 'Clear Housekeeping Parameter Report' command, which has the effect of stopping report generation in order that the table containing the definition of the report and the corresponding monitor table contents may be modified. Report generation restarts with the execution of this service.

Currently we assume that only one housekeeping report (frame) will be sent in each packet. In the event that we need more than one (e.g. to increase the efficiency of reporting critical housekeeping) HKREPEAT will be increased to specify the number of hsk frames per packet.

An on board table will contain in TBD format the information about parameters to be monitored; since monitoring is performed on parameters sampled as part of the nominal HK packet, a monitoring table_ID must be communicated to the OBS each time the HK table ID is updated. The details are TBD.

Possible Errors

Error	TM Service	Error Code	Description
Illegal_HK_Packet_ID	(1,8)	0x0821	HK_Packet_ID Out of Range
Illegal_HK_SID	(1,8)	0x0822	HK_SID MSB not 0x03
Illegal_Table_ID	(1,8)	0x0823	TABLEID is out of range of possible table numbers
Illegal_HK_Sampling Interval	(1,8)	0x0824	HK_Sampling Interval is less than the absolute limit (10, TBC)
Undefined_HK_Table	(1,8)	0x0825	Table given by TABLEID is not defined
Undefined_MON_Table	(1,8)	0x0826	Table given by MONITOR_TABLEID is not defined
Report_in_Use	(1,8)	0x0827	An attempt is being made to modify a report without first 'clearing' it.

3.2.8.3.35 Function 0xCC HSK, Activity 0x02: CLEAR_HK_REPORT

This command is used to clear the definition of a housekeeping report. It is usually used prior to redefining the report with TM(8,4):Funct-Act CC-01 and has the affect of stopping report generation within the OBS.

This command should not be used for disabling reporting (use service (14,2) for this) as the definition of the report contents and sampling interval is lost.

0	0	0	1	1	APID1								
1	1	Src			Count								
Length = 11													
0	0	0	0	Ack	1	0	0	0	0	1	0	0	0

Error	TM Service	Error Code	Description
Illegal_HK_Packet_ID	(1,8)	0x0821	HK_Packet_ID Out of Range
Undefined_HK_Packet_ID	(1,8)	0x829	HK Packet ID not associated with a table

3.2.8.3.36 Function 0xCC HSK, Activity 0x03: REPORT_HK_REPORT

This command is used to report the definition of a housekeeping report.

The information requested by this command is reported in TM service (21,4). This contains only the information provided in the report definition telecommand. The actual definition of the report contents may be obtained by dumping the appropriate table.

0	0	0	1	1	APID1								
1	1	Src			Count

Checksum													

Parameters

Name	Comments
FUNCTIONID	0xCC
ACTIVITYID	0x03
SID	0x0023
HKPCKTID	HK_Packet_ID, <i>in range 0-3</i>

Note: The parameter is placed in the least significant bits of the 16 bit 'parameter' field and the most significant bits are padded with zeros.

Possible Errors

Error	TM Service	Error Code	Description
Illegal_HK_Packet_ID	(1,8)	0x0821	HK_Packet_ID Out of Range
Undefined_HK_Packet_ID	(1,8)	0x829	HK Packet ID not associated with a table

3.2.8.4 ReportFunction Status (Service 8,5) REPORT_FUNCTION

This telecommand requests a report on the status of a function. The instrument should respond with a TM(8,6) report.

0	0	0	1	1						APID1					
1	1	Src								Count					
Length = 7															
0	0	0	0	0	0	0	1	0	0	0	0	1	0	0	0

Not Available

3.2.11 On-Board Scheduling

Not Used

3.2.12 On-Board Monitoring

Not Used

3.2.13 Unused Service

Not Available

3.2.14 Packet Transmission Control

3.2.14.1 Enable Generation of Telemetry Packets (Service 14,1) ENABLE_TM_GENERATION

This telecommand enables the transmission of instrument telemetry packets. By default all packets are enabled for transmission when the OBS starts. This telecommand is therefore only needed to restart transmission after transmission has been disabled.

0	0	0	1	1	APID1
1	1	Src	Count

Parameters

Name	Value and Comments
NPCKTS	Number of packets to enable
TYPE	Packet Type to enable
SUBTYPE	Packet Subtype to enable
PACKETID	Packet ID to enable

Possible Errors

Error	TM Service	Error Code	Description
Illegal_Type	(1,8)	0x0e01	Not a valid packet type for this APID
Illegal_Subtype	(1,8)	0x0e02	Not a valid subtype for packet with type TYPE
Illegal_PacketID	(1,8)	0x0e03	Not a valid Packet ID for packet with type TYPE and subtype SUBTYPE
Bad_NPCKTS	(1,8)	0x0e04	Number of packets to be enabled is not correct for telecommand length

3.2.14.2 Disable Generation of Telemetry Packets (Service 14,2) DISABLE_TM_GENERATION

This telecommand disables the transmission of instrument telemetry packets. By default all packets are enabled for transmission when the OBS starts.

Note: Disabling TM generation does not stop generation of the TM packets within the OBS. These are created and processed as normal, but the packet is not passed to the 1553 interface to be sent to the CDMU. This is necessary to ensure that Housekeeping Monitoring continues to function even if the housekeeping TM is disabled, for example. To be Confirmed

4. SPIRE TELEMETRY PACKETS

This section defines all the TM packets that will be produced by SPIRE.

4.1 Telemetry Packet Types

The Packet Structure ICD (AD1) defines many types of service that can be provided by an Application. The following table shows the telemetry packet types that will be produced by the SPIRE.

Description	Service Type	Service Sub-Type	Comments
Telecommand Verification Service			
Telecommand Acceptance Report - Success	1	1	
Telecommand Acceptance Report - Failure	1	2	
Telecommand Execution Report - Started	1	3	
Telecommand Execution Report - Progress	1	5	
Telecommand Execution Report - Completed	1	7	
Telecommand Execution Report - Failure	1	8

TIME															
TC_Packet_ID															
TC_Packet_Sequence_Control															
Failure Code															
Parameters															
Checksum															

Error	Failure Code	Parameters
Illegal or inconsistent Application Data	5	See Note
Illegal Function ID	0x0801	See Note
Illegal Activity ID	0x0802	See Note

Note: The parameters field should contain the first 20 words from the 'source data' field of the received telecommand packet, unless this field is less than 20 words in length, in which case all words from the 'source data' field will be included and padded with zeros.

4.2.1.3 Telecommand Execution Report - Started (1,3)

This report is generated at the start of execution of a telecommand. It is only transmitted in telemetry if the corresponding bit of the Ack field is set.

00001	APID1
11	Count
	Length = 15
0000000000000001	
0000000110000000	
TIME	
TC_Packet_ID	
TC_Packet_Sequence_Control	
Checksum	

4.2.1.4 Telecommand Execution Report - Progress (1,5)

These reports may be generated by an executing telecommand. They are only transmitted in telemetry if the corresponding bit of the Ack field is set.

00001	APID1
11	Count
	Length = 17
0000000000000001	
0000001010000000	
TIME	
TC_Packet_ID	
TC_Packet_Sequence_Control	
Step_Number	
Checksum	

4.2.1.5 Telecommand Execution Report - Completion (1,7)

This report is generated at the successful completion of execution of a telecommand. It is only transmitted in telemetry if the corresponding bit of the Ack field is set.

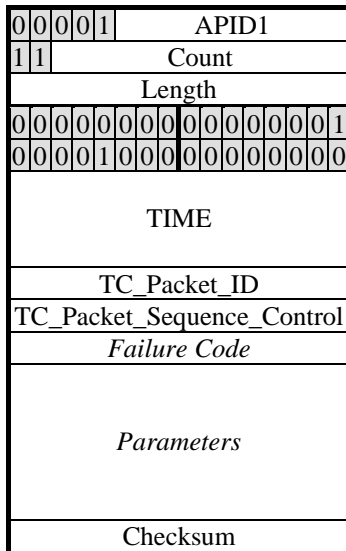

00001	APID1
11	Count
	Length = 15
000000000000001	
0000001110000000	
TIME	
TC_Packet_ID	
TC_Packet_Sequence_Control	
Checksum	

4.2.1.6 Telecommand Execution Report - Failure (1,8)

This report is generated at the unsuccessful completion of execution of a telecommand

The structure of this packet depends on the type of error found., but follows the general form:

The following error Failure Codes have been defined with the parameters to be provided in the TM packet:

Error	Failure Code	Parameters
Illegal_Memory_ID	0x0601	Requested Memory_ID
Illegal_Start_Address	0x0602	Required Start Address
Illegal_Nsau	0x0603	Uplinked Nsau
Bad_Nsau	0x0604	Uplinked Nsau
Bad_CRC	0x0605	Uplinked CRC
Bad_Load	0x0606	Calculated Checksum
Illegal_Function_ID	0x0801	
Illegal_Activity_ID	0x0802	
Illegal_Table_ID	0x0805	Uplinked Table_ID
Illegal_Table_Index	0x0806	Uplinked Table Index
Bad_Data	0x0808	Number of 32 bit data words uplinked
Table_Space_Full	0x0809	Required Table Length
VM_Inactive	0x080A	Index of VM required to stop
VM_Active	0x080C	Index of VM required to run
Bad NData	0x080D	Uplinked number of Data Words
LS_Sync_Error	0x080E	Sync command sent
Illegal_FIFOFlags	0x080F	Uplinked FIFO flag word
VM_Undefined_Table_ID	0x0810	Table_ID
Undefined_Table	0x0811	Requested Table_ID
EEPROM_Failed	0x0812	Number of errors
Table_Busy	0x0813	Requested Table ID
Illegal_Frame_ID	0x0815	Uplinked Frame_ID

Illegal_Select_ID	0x0816	Uplinked Select_ID
Undefined_Sel_Tamble	0x0817	Table ID not defined
Invalid_Len_Sel_Table	0x0818	Table size doesn't match with Frame Length
Invalid_Content_Sel_Table	0x0819	Table doesn't contain a valid Boolean array
Peak_up Error	0x0820	-----
Illegal_HK_Packet_ID	0x0821	Uplinked HK_Packet_ID
Illegal_HK_SID	0x0822	Uplinked HK_SID
Illegal_Table_ID	0x0823	Uplinked Table_ID
Illegal_HK_Sampling Interval	0x0824	Required HK_Sampling_Interval (ms)
Undefined_HK_Table	0x0825	Uplinked HK Table_ID
Undefined_Monitoring_TableID	0x0826	Uplinked Monitoring_TableID
Report_in_Use	0x0827	Uplinked HK_Packet_ID
Undefined_HK_ID	0x0829	HK Packet ID requested doesn't correspond to a currently running table
Function_Active	0x0830	Requested Function is already Active
Function_Stopped	0x0831	Requested Function is already Stopped
Illegal_Type	0x0E01	APID Type Subtype SID
Illegal_Subtype	0x0E02	APID Type Subtype SID
Illegal_SID	0x0E03	APID Type Subtype SID Packet ID
Bad_NPCKTS	0x0E04	Length NPCKTS

4.2.2 Device Command Distribution

Not Used

4.2.3 Housekeeping and Diagnostic Data Reporting

4.2.3.1 Housekeeping Parameter Report (Service 3,25)

The general packet structure is shown below. The Structure ID identifies the housekeeping packet type.

0	0	0	0	1	APID									
1	1	Count												
Length														
0	0	0	0	0	0	0	0	0	0	0	0	1	1

4.2.3.3 Nominal Housekeeping Report (SID=0x0301)

The following table lists the field to be found in this report

Location	Field Offset (bits)	Field Length (bits)	Parameter Name	CMD	Ref.	Description
18	0	32	OBSID	20010000	AD03	Observation ID
22	0	32	BBID		AD03	Building Block ID
	16	16	BBTYPE			
26	0	16	MODE	10030000		Observing Mode – set by command
28	0	16	STEP	10040000		Observation Step – set by command
30	0	48	THSK	30050000		Time of start of housekeeping collection
36	0	48	TRESET	30060000		Time of last reset command to the DRCU
42	0	16	TCRECV			Count of Telecommands Received
44	0	16	TCRECN	10080000	AD01	Packet Sequence Control, Sequence count of latest received telecommand
46	0	16	TCEXEC			Count of Telecommands Executed
48	0	16	TCEXEN	100A0000	AD01	Packet Sequence Control, Sequence count of latest executed telecommand
50	0	16	TM1N		AD01	Packet Sequence Control, Sequence count of TM Packets for APID1
52	0	16	TM2N		AD01	Packet Sequence Control, Sequence count of TM Packets for APID2
54	0	16	TM3N		AD01	Packet Sequence Control, Sequence count of TM Packets for APID3
56	0	16	TM4N		AD01	Packet Sequence Control, Sequence count of TM Packets for APID4
58	0	16	TM5N		AD01	Packet Sequence Control, Sequence count of TM Packets for APID5
60	0	16	DCUFRAMECNT			No of frames read from DCU FIFO
62	0	16	MCUFRAMECNT			No of frames read from MCU FIFO
64	0	16	SCUFRAMECNT			No of frames read from SCU FIFO
66	0	48	TSYNC			Time of last re-sync with CDMS
72	0	48	TDIFF			Difference between current DPU time and CDMS Time difference-at last re-sync with CDMS
	0	32	DIFFS			
78	0	48	MEMSTAT			Memory Check Flags – updated by background memory checking task
84	0	16	MONSTAT			Status of subsystems monitoring
86	0	16	EVENTSTAT			Status of events
88	0	16	VMSTAT			Status of VM (table ID being executed)
90	0	16	VM1STAT			Status of VM1 (table ID being executed)
92	0	16	VM2STAT			Status of VM2 (table ID being executed)
94	0	16	VM3STAT			Status of VM3 (table ID being executed)
96	0	16	TMMODE			Telemetry Mode (Normal/Burst)
98	0	16	DCUSELECTFRM			DCU Science frame from which selection is made
100	0	16	DCUSELECTTAB			Table defining DCU selection
102	0	16	SMECSELECTFRM			SMEC Science frame from which selection is made
104	0	16	SMECSELECTTAB			Table defining SMEC selection
106	0	16	BSMSELECTFRM			BSM Science frame from which selection is made
108	0	16	BSMSELECTTAB			Table defining BSM selection
110	0	16	SCUSELECTFRM			SCU Science frame from which selection is made

Location	Field Offset (bits)	Field Length (bits)	Parameter Name	CMD	Ref.	Description
112	0	16	SCUSELECTTAB			Table defining SCU selection

4.2.4 Unused Service

Not Available

4.2.5 Event Reporting

4.2.5.1 Event Report (5,1)

These reports provide information on events in the instrument which may impact on the scientific results, but which should have no impact on the health and safety of the instrument. These will include the reporting of anomalies which have been dealt with by the DPU

4.2.5.1.1 New Step Report

Indicates a new step in the current operation Mode. This event is issued every time the MODE or STEP Number is changed

000001	APID1
11	Count
Length = 29	
00000000000000000101	
00000000010000000000

ALLOC_RESULT_UBR														
TASKID_UBR														
NPKT_UBR														
MAXPKT_UBR														
Checksum														

Parameter	Comment
EVENTID_UBR	0x0505
SID_UBR	0x5102
OBSID_UBR	Observation ID
BBID_UBR	Building Block ID
EVENTCOUNT_UBR	Sequential counter for TM(5,1) events
POOLID_UBR	ID of the VIRTUOSO Pool which failed to allocate block. IDs are defined in RD08
SIZE_UBR	Size in Bytes of the requested memory block
ALLOC_RESULT_UBR	Allocation Result: <ol style="list-style-type: none"> 1. Allocation Failed 2. Allocation Timed out
TASKID_UBR	ID of the OBS task where failure occurred. IDs are defined in RD08
NPKT_UBR	Number of packets currently present in pool
MAXPKT_UBR	Maximum number of packets in pool

4.2.5.1.4 Unknown Command Report

In response to a command the DRCU indicated that the Command ID was not known

00001	APID1
11	Count
Length = 33	
00000000000000000101

OBSID_SRE	Observation ID
BBID_SRE	Building Block ID
EVENTCOUNT_SRE	Sequential counter for TM(5,1) events
COMMAND_SRE	Copy of command sent to DRCU (32 bits)
RESPONSE_SRE	Copy of command echo returned by DRCU (32bits)
CMDIFSTAT_SRE	Interface Status Word following command
SUBSDELAY_SRE	Subsystem Delay

4.2.5.1.11 DPU Pool Error

This (a warning more than an error) is issued when the DPU internal memory pools (where the TM packets are stored before being sent to the 1553 I/F, it will be detailed in the ADD some time) reach a 80% occupation.

0	0	0	0	1	APID1

EVENTID_DPE	0x050D
SID_DPE	0x510A⊗
OBSID_DPE	Observation ID
BBID_DPE	Building Block ID
EVENTCOUNT_DPE	Sequential counter for TM(5,1) events
POOLID_DPE	ID of the VIRTUOSO Pool which failed to allocate block. IDs are defined in RD08
NPKT_DPE	Number of packets currently present in pool
MAXPKT_DPE	Maximum number of packets in pool
TERROR_DPE	Time When Error Occurred (48 bits)

4.2.5.1.12 DPU FIFO Error

This (a warning more than an error) is issued when the DPU internal VIRTUOSO FIFOs (used to exchange messages between OBS tasks, it will be detailed in the ADD some time) reach a 80% occupation.

FUNCTIONID	ACTIVITYID
SID	
Checksum	

Parameters

Name	Value and Comments
FUNCTIONID	ID of function to be reported
ACTIVITYID	Current Activity = 00 if function is stopped = FF if function is active and waiting
SID	= 0x0000 indicates no parameters

4.2.8.2 VM Functions Report

These correspond to Function IDs 0x02, 0x03, 0x04 and 0x05

000001	APID1
11	Count
Length	
00000000000000010000	
00000011000000000000	
TIME	
FUNCTIONID	ACTIVITYID
SID	
TABLEID	
INDEX	
N	
Data	
Checksum	

Parameters

Name	Value and Comments
FUNCTIONID	ID of function to be reported
ACTIVITYID	Current Activity = 01 when Executing a Command List = 02 when Running from a table = 03 when Halted
SID	0x0860
TABLEID	Table containing Command List Not applicable when ACTIVITYID = 01
INDEX	Index within Table to start executing Not applicable when ACTIVITYID = 01
N	Number of Data words
Data	N*32 bit data words

4.2.8.3 DPU Functions Report

These correspond to Function ID 0xCA

0	0	0	0	1	APID1										
1	1	Count													
Length =19															
0	0	0	0	0	0	0	0	0	0	0	0	1	0	0	0
0	0	0	0	0	1	1	0	0	0	0	0	0	0	0	0
TIME															
FUNCTIONID					ACTIVITYID										
SID															
N															
FRAMEID															
SELSID															
TABLEID															
.....															
Checksum															

Parameters

Name	Value and Comments
FUNCTIONID	ID of function to be reported
ACTIVITYID	Current Activity = 10 when selecting = 11 when not selecting
SID	0x0861
N	Number of times FRAMEID, SELSID and TABLEID are repeated
FRAMEID	Science Frame data is selected from
SELSID	SID for the Select TM Packets
TABLEID	Table containing the selection information (= 0xffff if not selected)

Note: the group FRAMID, SELSID, TABLEID are repeated 24 times in this packet

4.2.9 Time Management

4.2.9.1 Time Verification Report

This report is generated in response to TC(9,7)

000001	APID1
11	Count
Length = 17	
0000000000000001001	
000001001000000000	
TIME	
TDPU	
Checksum	

Parameters

Name	Value and Comments
TDPU	Copy of the On board time held by the DPU

4.2.10

Not Available

4.2.11 On Board Scheduling

Not Used

4.2.12 On Board Monitoring

Not Used

4.2.13

Not Available

4.2.14 Packet Transmission Control

This report is issued in response to TC (14,3) and lists all the enabled TM packets.

000001	APID1
11	Count

4.2.21 Science Data

4.2.21.1 Nominal Science Data Report (21,1)

0	0	0	0	1	APID										
1	1	Count													
Length															
0	0	0	0	0	0	0	0	0	0	0	1	0	1	0	1
0	0	0	0	0	0	1	0	0	0	0	0	0	0	0	0
TIME															
<i>SID</i>															
OBSID															
BBID															
<i>Parameters</i>															
Checksum															

The reports available are identified by the APID (APID3 = Photometer, APID4 = Spectrometer and APID5 = Subsystem Data) and the SID (composed of the Frame Structure (MSByte) and FrameID (LSByte)):

APID	SID	Report
APID3	0x0200	Photometer Full Array
APID4	0x0201	Spectrometer Full Array
APID5	0x0410	SMEC
APID5	0x0612	BSM
APID5	0x0A20	SCU
APID5	0x8080	DPU

The *parameters* field contains one or more blocks of science data all of the same type. These blocks are the same as the science data frames issued by the DRCU, except for the DPU Block, which is created by the DPU. Normally the DPU fills the TM packet with the maximum number of blocks before the packet is made available for transmission. In the event of a **flush_fifo** telecommand the packet is transmitted immediately and will not be filled. The **length** field, with the APID and SID, allows the number of blocks in the packet to be calculated.

The possible block types are as follows:

4.2.21.1.1 Photometer Full Array Block

This block of data is inserted in the *Parameter* field once.

Block Length=294
FrameID=0x00
288 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.1.2 Spectrometer Full Array Block

Block Length=78
FrameID=0x01
72 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.1.3 SMEC Block

In order to meet the telemetry bit rate requirements, this block is normally selected (see TM(21,2)).

This is the default block contents – it may be changed by command to the MCU.

Block Length=9
FrameID=0x10
SMECENCPOSN
SMECENCFINEPOSN
SMECLVDTDCSIG
SMECMOTORBEMF
Frame Time MSW
Frame Time LSW
Checksum

4.2.21.1.4 BSM Block

This is the default block contents – it may be changed by command to the MCU.

Block Length=11
FrameID=0x12
CHOPSENSSIG

CHOPCYCLE
CHOPFLAG

This structure is TBC

4.2.21.2 Science Type B Data Report (21,2)

000001	APID
11	Count
	Length
0000000000000001010101	
000000010000000000	
	TIME
	SID
	OBSID
	BBID
	Parameters
	Checksum

The reports available are identified by the APID (APID3 = Photometer, APID4 = Spectrometer) and the SID (composed of the Frame Structure (MSByte) and FrameID (LSByte)):

APID	SID	Report
APID3	0x0102	PSW Array
APID3	0x0103	PMW Array
APID3	0x0104	PLW Array
APID4	0x0105	SSW Array
APID4	0x0106	SLW Array
APID5	0x0Fnn	Selected Data

The *parameters* field contains one or more blocks of science data all of the same type.

These blocks are the same as the science data frames issued by the DRCU, except in the case of the Selected Data Report.

Normally the DPU fills the TM packet with the maximum number of blocks before the packet is made available for transmission. In the event of a **flush_fifo** telecommand the packet is transmitted immediately and will not be filled. The **length** field, with the APID and SID, allows the number of blocks in the packet to be calculated.

The possible block types are as follows:

4.2.21.2.1 PSW Array Block

Block Length=150
FrameID=0x02
144 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.2.2 PMW Array Block

Block Length=102
FrameID=0x03
96 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.2.3 PLW Array Block

Block Length=54
FrameID=0x04
48 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.2.4 SSW Array Block

Block Length=54
FrameID=0x05
48 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.2.5 SLW Array Block

Block Length=30
FrameID=0x06
24 Detector Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detectors in the block is shown in Appendix D

4.2.21.2.6 Selected Data Block

Data Values

The data in this block is determined by the selection in force at the time. The SID is fixed for a given selection.

Currently only two selections are defined:

4.2.21.2.6.1 SID = 0x0F00: SMEC Selected Data

SMECENCPOSN
SMECENCFINEPOSN
SMECLVDTDCSIG
SMECMOTORBEMF
Frame Time MSW
Frame Time LSW

4.2.21.2.6.2 SID = 0x0F01: Parallel Mode Data

TBD

4.2.21.3 Diagnostic Science Report (21,3)

000001	APID
11	Count
	Length
0000000000000001010101	
000000011000000000	
	TIME
	SID
	OBSID
	BBID
	Parameters
	Checksum

The reports available are identified by the APID (APID3 = Photometer, APID4 = Spectrometer and APID5 = Subsystem Data) and the SID (composed of the Frame Structure (MSByte) and FrameID (LSByte)):

APID	SID	Report
APID3	0x0309	Photometer Test Pattern
APID3	0x030A	PSW Test Pattern
APID3	0x030B	PMW Test Pattern
APID3	0x030C	PLW Test Pattern
APID4	0x030D	Spectrometer Test Pattern
APID4	0x030E	SSW Test Pattern
APID4	0x030F	SLW Test Pattern
APID5	0x0814	MCU Engineering
APID5	0x0915	MCU Test Pattern
APID5	0x1121	SCU Test Pattern
APID5	0xFF00	Transparent Data

The *parameters* field contains one or more blocks of science data all of the same type. These blocks are the same as the science data frames issued by the DRCU, with the exception of the Transparent Data

Normally the DPU fills the TM packet with the maximum number of blocks before the packet is made available for transmission. In the event of a **flush_fifo** telecommand the packet is transmitted immediately and will not be filled. The **length** field, with the APID and SID, allows the number of blocks in the packet to be calculated.

The possible block types are as follows:

4.2.21.3.1 Photometer Full Test Pattern Block

This block of data is inserted in the *Parameter* field once.

Block Length=294
FrameID=0x09
288 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.2 Photometer SW Test Pattern Block

Block Length=150
FrameID=0x0A
144 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.3 Photometer MW Test Pattern Block

Block Length=102
FrameID=0x0B
96 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.4 Photometer SW Test Pattern Block

Block Length=54
FrameID=0x0C
48 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.5 Spectrometer Full Test Pattern Block

Block Length=78
FrameID=0x0D
72 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.6 Spectrometer SW Test Pattern Block

Block Length=54
FrameID=0x0E
48 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.7 Spectrometer LW Test Pattern Block

Block Length=30
FrameID=0x0F
24 Test Values
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Values is TBD

4.2.21.3.8 MCU Engineering Block

This block is available to transmit any MCU parameters to the ground as science telemetry. The default parameters are given in the table below. Any parameter may be replaced by command to the MCU.

Block Length=19
FrameID=0x14
SMECSERVOERROR
SMECENC SIG1
SMECENC SIG2
SMECENC SIG3
SMECLVDTAC SIG
SMECLVDTDC SIG
SMECMOTORCURRE
SMECMOTORVOLT
CHOPSENS SIG
CHOPMOTORCURRE
CHOPSERVOERROR
JIGGSENS SIG
JIGGMOTORCURRE
JIGGSERVOERROR
Frame_Time MSW
Frame_Time LSW
Checksum

4.2.21.3.9 MCU Test Pattern Block

Block Length=19
FrameID=0x15
14 Test Values
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Data is TBD

4.2.21.3.10 SCU Test Pattern Block

Block Length=30
FrameID=0x21
Test Data (24 words)
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The content of the Test Data is TBD

4.2.21.3.11 Transparent Data Block

This block is used to transmit science data read directly from a FIFO without any processing of data frames.

It is used if an error is found in the structure of the data held in a FIFO, to dump the contents of the FIFO for diagnostic purposes.

Note: As the FIFO contents could be larger than could be accommodated in one TM packet. The data is sent as a group of packets using the segmentation flags (AD01 – para 4.1.1.2.1) to identify the first, intermediate and last packets.

FIFOID
INDEX
NDAATA
FIFO Data

4.2.21.4 Auxiliary Science Data Report (21,4)

000001	APID
11	Count
	Length
00000000000000010101	
000000100000000000	
	TIME
	SID
	OBSID
	BBID
	Parameters
	Checksum

The reports available are identified by the APID (APID3 = Photometer, APID4 = Spectrometer) and the SID (composed of the Frame Structure (MSByte) and FrameID (LSByte)):

APID	SID	Report
APID3	0x0207	Photometer Offsets
APID4	0x0208	Spectrometer Offsets
APID5	0x0209	Housekeeping Packet Definition
APID5	0x020A	Report Table Report
APID5	0x020B	DPU Science Data

The *parameters* field contains one or more blocks of science data all of the same type. Normally the DPU fills the TM packet with the maximum number of blocks before the packet is made available for transmission. In the event of a **flush_fifo** telecommand the packet is transmitted immediately and will not be filled. The **length** field, with the APID and SID, allows the number of blocks in the packet to be calculated.

The possible block types are as follows:

4.2.21.4.1 Photometer Offsets Block

This block of data is inserted in the *Parameter* field once.

Block Length=294
FrameID=0x07
288 Offsets
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detector offsets in the block is shown in Appendix D

4.2.21.4.2 Spectrometer Offsets Block

Block Length=78
FrameID=0x08
72 Offsets
ADC_Flags
Frame_Time MSW
Frame_Time LSW
Checksum

The order of the detector offsets in the block is shown in Appendix D

4.2.21.4.3 Housekeeping Packet Definition

The reported parameters are those sent in the Housekeeping Packet definition command

HKPCKTID
HKSID
HKINTERVAL
HKREPEAT
TABLEID
MONITOR_TABLEID

4.2.21.4.4 Report Table Report

The parameters field contains the requested table contents.

Note: As the Table contents could be larger than could be accommodated in one TM packet. The data is sent as a group of packets using the segmentation flags (AD01 – para 4.1.1.2.1) to identify the first, intermediate and last packets.

MCUTELSTAT	Telemetry	TBD	TBD		Define TM packets to be sent
MCUTELSAMP	TelemetrySampling	TBD	TBD		Sampling Rate of Telemetry Packets
MEMCHK		48	TBD		Memory Check Flags
MODE		16	TBD		Instrument Operating Mode
MONSTAT		16	MONSTAT		Subsystem Monitoring Status -- indicates if the subsystem is on/off
DCUMONSTAT		1			DCU Status (bit 0)
MCUMONSTAT		1			MCU Status (bit 1)
SCUMONSTAT		1			SCU Status (Bit 2)
OBSID		32			Observation ID
OBSLEN		32			Time since start of Observation (secs)
OTFERROR		16, TBC	TBD		On Target Flag Error
OTFTIME		48			On Target Flag Time
OTF		1	OTF		On Target Flag
PHOTBIAS9V	DcuBPHp09	TBD	TBD	TBD	Voltage to Photometer Bias Board on +9V line
PHOTBIAS9VN	DcuBPHn09	TBD	TBD	TBD	Voltage to Photometer Bias Board on -9V line
PHOTBIASFREQ	Div_photo_bias	9	BIASFREQ		Photometry Bias frequency
PHOTBIASMODE	Mode_photo_bias	8	BIASMODE		Photometry bias generator mode
PHOTLIA5V	Dc uLPHp05	TBD	TBD	TBD	Voltage to Photometer LIA Board on +5V line
PHOTLIA9V	Dc uLPHp09	TBD	TBD	TBD	Voltage to Photometer LIA Board on +9V line
PHOTLIA9VN	Dc uLPHn09	TBD	TBD	TBD	Voltage to Photometer LIA Board on -9V line
PHOTSAMPFREQ	Div_photo_sampl	8	PSAMPFREQ		Photometry sampling frequency
PHTRV	Ampl_photo_heater	8	HTR		Voltage applied to photometer heaters
PLWBIAS	Ampl_P500	8	BIAS		Amplitude of bias for photometry long wave channels
PLWJFET1V	Ampl_P500_VSS1	8	JFETV		Voltage applied to JFET for photometry long wave channels (group1)
PLWJFET2V	Ampl_P500_VSS2	8	JFETV		Voltage applied to JFET for photometry long wave channels (group2)
PLWPHSE	Phase_shift_P500	8	PHASE		Phase shift for long wave photometry channels demodulation
PMLWJFETSTAT		6			
PMWJFET1STAT	P350_JFET_1	1	JFETSTAT		Status of JFET power for photometry medium wave channels (group1) (Bit 7)
PMWJFET2STAT	P350_JFET_2	1	JFETSTAT		Status of JFET power for photometry medium wave channels (group2) (Bit 6)
PMWJFET3STAT	P350_JFET_3	1	JFETSTAT		Status of JFET power for photometry medium wave channels (group3) (Bit 5)
PMWJFET4STAT	P350_JFET_4	1	JFETSTAT		Status of JFET power for photometry medium wave channels (group4) (Bit 4)
PLWJFET1STAT	P500_JFET_1	1	JFETSTAT		Status of JFET power for photometry long wave channels (group1) (Bit 3)
PLWJFET2STAT	P500_JFET_2	1	JFETSTAT		Status of JFET power for photometry long wave channels (group2) (Bit 2)

5.2.3 Constraints

Appendix A

This section describes the use of the On Board Software (OBS) commands and telemetry in sufficient detail that the interface can be understood.

6. TABLES

Much of the data used by the OBS for operations will be held in tables. These will be used to hold, for example:

- Housekeeping packet parameter lists
- Jiggle position tables
- Command Lists

The OBS will provide for the definition of up to 128 tables, within a fixed-size memory area and will automatically move data within this memory area in order to allow update of tables, including a change in size.

By default the following table numbers are assigned and populated in the OBS, though they may be changed by command:

Table ID	Description
00	Critical Housekeeping Report Definition
01	Nominal Housekeeping Report Definition
02	undefined
03	undefined
21	Cooler Recycle
22	Cooler Temperature Control
23	300mK Temperature Control
24	SCAL Temperature Control
31	CHOP
32	SCAN
100	Functions

All tables are accessed using a Table_ID and individual locations in the table are accessed by an index, specified as a number of words, offset from the beginning of the table. The word size is 32bits.

Appendix B

7. CONTROL LOOPS

Several control loops are executed by the On-board Software. These are all implemented as PID (Proportional, Integral, Differential) control algorithms, where the control variable (C) is adjusted to maintain the measurement variable (M) at the set point (S). The equation giving this relationship is

$$C_N = C_{N-1} + K_P * (S - M_N) + K_I * \left(S - \frac{\sum_{i=N-n}^{i=N} M_i}{n+1} \right) + K_D * (M_N - M_{N-1})$$

Where:

C_N = Control variable value for sample period N
 M_N = Measurement Variable value at sample N
 S = Required Set Point of the measurement variable
 K_P = Proportional Gain
 K_I = Integral Gain
 K_D = Differential Gain
 n = number of samples in the integral

7.1 Control Loop Parameters

When starting the control loop the following parameters have to be provided

- S = Required Set Point of the measurement variable
- K_P = Proportional Gain
- K_I = Integral Gain
- K_D = Differential Gain
- n = number of samples in the integral (max 32, TBC)
- dt = the time interval between samples
- P_M = The housekeeping parameter to use as the measurement variable
- P_C = The housekeeping parameter to use as the control variable

It is expected that the software shall maintain a buffer containing the last n samples in order to calculate the integral term for each sample period.

If the accuracy of the measurement sampling interval cannot be guaranteed, the software will also need to maintain a buffer containing the time of each of the n samples in order to make a more accurate estimate of the integral and differential terms (the equation above assumes a fixed sampling period).

The software must ensure that the accuracy of the calculation is adequate (e.g. by use of floating point, or fixed point, math functions)

Appendix C

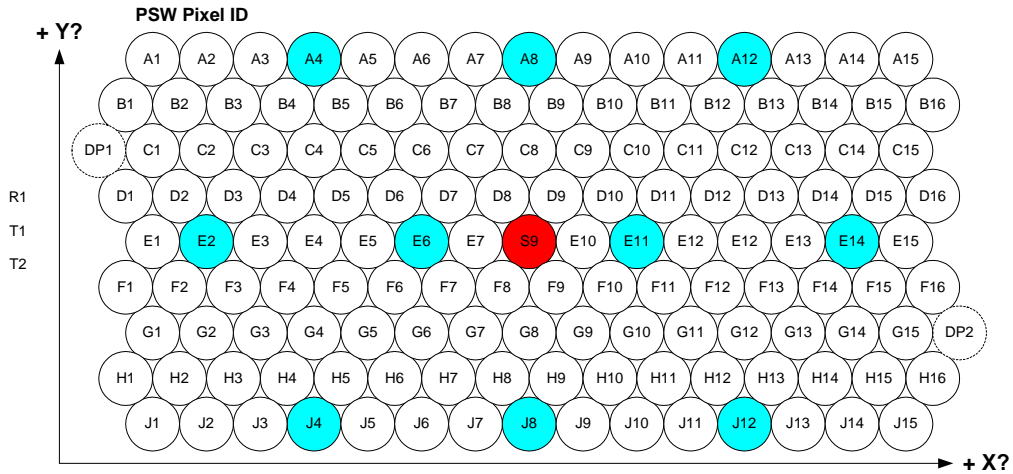

8. COMMAND LIST

This section (TBW) defines the command list entries that are available.
