SPIRE -MSS-COM-001082

We have updated the 3D model but..... I found out the draftsman did not update the footprint for the JFET boxes. I have updated the website, so it is available to you (all is correct but the JFET interface), but we need to go through the loop once more. My apologies for that.

Cheers, Berend

Subject: 3D model

Just to keep you up to speed with our progress, we had created a new 3D interface model by the end of December, but it did not include one modification I found out which you requested. Namely a more realistic thermal strap interface. We will sort this out asap. (should be available early next week) The end of december issue will be made available later today on our website:

<http://www.mssl.ucl.ac.uk/spire/> Look under 3D-models.

Site is down now and will be probably, due to some maintenance work, be down between 18:00 and 20:00 h our time this evening. Should be up and running again on Monday.

Kind regards, Berend Winter
