1.INTRODUCTION

This document contains the SPIRE Warm Functional Test Procedures to be executed during IST after electrical integration with the Herschel satellite.

1.1 Purpose

The main purposes of this document are:

- To define a general pass fail criteria for overall test execution.
- To give detailed and comprehensive step-by-step instructions on how to perform each single test
- To estimate the duration of procedure based on individual test run times.

1.2 Scope

This procedure is intended to be used for the checkout of the functionality of all SPIRE subsystems warm during the IST **but can also be used during the AVM campaign as a tool to verify all relevant CCS templates**. The same templates will be used for both the AVM and the IST.

- Where deviations from the behaviour of the real instrument are expected (AVM), this is clearly identified by separate sequences within the actual procedure, i.e., ***Procedure Steps for IST:*** and ***Procedure Steps for AVM:*** are available.
- This procedure is applicable to both PRIME and REDUNDANT instrument

1.3 Change Record

Issue 2.0, 13/06/2006

- IST version

Issue 2.1, 16/08/2006

- Rearranged Section 1.
- Inserted Section 2.1 to specify a general Pass/Fail Criterion.
- Removed Functional Test FUNC-BSM-06 as this functionality check is already covered by FUNC-BSM-5b
- Removed Functional Test FUNC-SMEC-04b as there is no extra functionality checked by this test that is not covered by the rest SMEC tests.
- Corrected typo in Section 1.7: (CFT instead of WFT)
- Corrected several typos/mismatches in Section 2:
 - *Procedure 2.3.8* : FUNC-SCU-07 voltages from EVHSV and SPHSV were swapped
Minor updated on the step procedures.
 - *Procedure 2.3.20*: Typo on BSM-05b for template to execute.
 - *Procedure 2.3.34*: FUNC-DCU-03 frame count parameter value corrected
 - *Procedure 2.3.35*: Typo on FUNC-DCU-11P

1.5 Reference Documents

RD01 SPIRE Instrument User Manual, Issue 1.0, SPIRE-RAL-PRJ-002395, 08/04/2005

1.6 Constrains

- Some procedures can only be run after integration of the SPIRE FPU with the Herschel Flight Cryostat– where appropriate this is clearly indicated in the preconditions section of each procedure
- For the SPIRE spectrometer mechanism (SMECM) tests it is assumed that the Herschel cryostat will be tilted (TBD).
- The converted TM parameter values are extracted from the MIB in use for PFM ILT. These values are subject to change for both prime and redundant operations.

1.7 Open Issues

- Names of the Herschel Satellite procedures for powering on/off the SPIRE DPU and DRCU are to be filled in the next version. In this version they are marked as procedure XXXXXX.

1.8 Duration

The estimated total duration for executing the entire WFT sequence of procedures, including switch off of the SPIRE instrument afterwards is about 4-5 hours.

2. WARM FUNCTIONAL TEST PROCEDURE

2.1 General instructions for executing test procedures

- Before executing any of the procedures please always check with the I-EGSE staff
- Any text in **boldface** in the procedural steps generally indicates an action which has to be performed manually by the Instrument EGSE (I-EGSE) staff.
- The procedures are listed here in the order in which they are expected to be performed.
- For these functional tests the instrument will not always be in a pre-defined mode as listed in the IUM (**RD01**).
- The procedure tables include blank boxes where the actual values of parameters can be noted. Based on the comparison with the expected values the success or failure of a step should be recorded in the final column of the table.
- The last row in a procedure table should be used to record the overall Pass/Fail result of each test.

2.2 General Pass/Fail criterion

Consecutive failure of 2 executions of the same procedure is enough to declare the overall test result as failed. If the repetition of the procedure is successful this one should be repeated once again as a 'health' check. **In case of overall failure** [see section 3](#) of the document which addresses the safe switch OFF of the instrument under different scenarios.
