## 1 SCOPE

The scope of the procedure is to describe potting fasteners to lock them.

## 2 INTRODUCTION

All fasteners must be locked in place to prevent shacking loose during launch. Most fasteners will have locking inserts however there are some where this was not possible. It will state on the drawing where this process in applicable. This should only be done once all testing is completed and the BSM is in its final state ready and will not require any further work.

## 3 PROCESS

- Ensure all testing has been completed and the BSM is in its final state.
- Mix the Stycast as per **AD 4**
- Place a small amount of adhesive where visible under the head of the fastener.
