## 1 Scope

This Interface Control Document (ICD) describes the electrical Interfaces of the HERSCHEL Extended Payload Module and is the generic information source for all electrical interfaces including the 3 Instruments and the CCS (Cryostat Control System).

Interfaces, which are under Experimenter Control (FPU internal Interfaces) or under Service Module Control (Warm Interconnecting Harness and S/C Interfaces), are not part of this Document.

For Information management a database (ACCESS based) called CAIE (Computer Aided Interface Engineering) will be used. The CAIE Data Base contents provides all the necessary Information for a automated Verification of the electrical Interfaces with Integrated Data Acquisition System (IDAS)

System information's for

- System design as harness weight and type
- used amount of Connector types,
- Routing,
- Channel resistance
- etc

will also be derived from this Data Base

By summarising the electrical interfaces within this document, the ICD will allow a crosscheck of the I/F (harness) design from both sides of an interface. By collecting the interface design description the ICD will act as a reference for requirement verification and "third-party" interface design (e.g. electrical harness manufacture).

In this way the HERSCHEL EPLM interfaces will be maintained under control

Actual interface data (as designed/as built), after approval, shall become part of this Interface Control document.

Any change of the ICD contents shall follow the rules of configuration Control

The ICD presents a database about the electrical interfaces of the Extended Payload Module and its GSE. Interfaces in this context are all input/output interconnections mated via the ASSED provided EPLM harness. For any such interface the ICD enables a fast identification of the interface harness design, the actually built interface circuits, and the electrical parameters.

Within these features the main purpose of the ICD is:

- to act as a reference data base showing the present interface design (as designed/as built)
- to allow a quick compatibility check of any input/output interface interconnection ("on paper integration")
- to act as a supporting data base for the preparation and performance of the electrical/harness integration (IDAS)

- To facilitate failure investigations in the case of interface problems on EPLM level

The purpose of this document is to reflect the FM manufacturing baseline

Contents of this issue reflects the EPLM status as known at the 22 Feb 2002

## 2 Document Reference

### 2.1 General

The data of the below listed documents of the latest effective issue or the issue as defined below, are integrated as a part of this Interface Control Document (ICD)

In the event of conflict between the below listed documents and this ICD, the conflict shall be brought to the attention of the EPLM subcontractor for clarification.

### 3 How to use this Document

The EICD comprises the following generic Reports from a database called CAIE\_Ac97\_v1\_49.mdb and LDB

- HERSCHEL Subsystem List (Mechanical and electrical) SSL
- HERSCHEL Item List (Mechanical and Electrical) with Support Equipment IL
- Item Location Code
- EMC Category and Sub Harness Type (Harness separation) EML
- Cable Type and Characteristic List (used cable) CDT
- Cable Characteristic List CCL
- Connector Type List (used connectors) CTL
- Signal Type List STL
- Interface Type List (Common type of interfaces) ICT
- Connector Allocation List CAL
- Functional Channel Allocation List tbd FAL
- Functional Interfaces (Channels) tbd
- Drawings of Interfaces (from to) tbd
- Routing Information (via feed through and brackets, length) tbd
- Pin Allocation List PAL
- Drawing of pin allocation in connector tbd
- Supporting Information
  - Harness Weight according sort criteria
  - Connector weight according sort criteria
  - Used Connector Types
  - Harness/Channel Bundling
  - Information as requested sorted by tbd

After freeze of supporting data only an extract of that database will be used to update the information

This database is called HP-2-ASED-IC-0001 with the according Version No.

The Reports from that database will be

Connector Reference List

(Allocated Item, Function, Connector Type, belonging to Harness Cat

## 4 Subsystem Lists

### 4.1 General

In this List all the mechanical and electrical Subsystems of the HERSCHEL Project are identified. This includes the HERSCHEL/PLANCK system, the HERSCHEL System, the HERSCHEL Service Module, the (Extended) Payload Module, the Engineering Qualification Mode as well as the mechanical and electrical support Systems like MGSE, EGSE and SCOE's.

The List in general reflects the Work Breakdown Structure HP-1-ASPI-WB-0036, the Product Tree HP-1-ASPI-PT-0012 and the CI Tree from the Company CM2000 System

### 4.2 Subsystem Listing

## 5 Item List

### 5.1 General

In order to standardise the subsystem/experiment item identification for electrical interfaces the acronyms as defined in the list below shall be used for item identification within electrical ICD's. This item code identifies each item unequivocally. The item code consists of six digits. The first three digits identify the subsystem (see before), the last three digits identify the item within the subsystem. This includes all mechanical and electrical items in a subsystem (Self-standing parts like Electronic Boxes, brackets etc). Following the PTI the item list contains the same code without the prominent one from the PTI list (under investigation). Items for the EQM are not listed at the moment and not foreseen in this database tbd

#### Product Identifier

The following numbering system is allocated to the electrical items in the HERSCHEL EPLM system

1xx xxx	HERSCHEL Instruments
2xx xxx	HERSCHEL Extended Payload Module
3xx xxx	HERSCHEL Service Module
4xx xxx	HERSCHEL GSE
5xx xxx	HERSCHEL EQM
11x xxx	HIFI Instrument
12x xxx	SPIRE Instrument
13x xxx	PACS Instrument
xx1 xxx	Items inside the cryostat and on the CVV (Cold Units)
xx2 xxx	Items on the SVM Panels (Warm Units)

For mechanical Items this schematic is not foreseen at the moment

xxx yyy	unique item identification code
---------	---------------------------------

#### Abreviation

Self explaining Abbreviation for the item

H= HERSCHEL  
 HH = HERSCHEL HIFI  
 etc

Item Name

The item name is the more explaining name of the item (then the Abbreviation)

Subsystem

The Subsystem Code (first 3 digits) allocates the item to a subsystem

Abbreviation

Short Code of the Subsystem to which the item belongs

M, E, X

The items will be distinctive according

- |                                 |   |
|---------------------------------|---|
| • only mechanical function      | M |
| • item with electrical function | E |
| • isolation function            | I |
| • Superordinate System          | - |
| • tbd                           | x |

Location

The location code will be explained in the chapter xx

### 5.3 Item Location Code

For ease item location identification in the HERSCHEL satellite system a location code is allocated to each electrical item which is shown in the table below.

This code will be allocated to each harness plug connector code to support harness manufacturing and integration. System integration and interface test will also benefit from this system.

## 6 Electrical Harness Separation and EMC Classes

*(Under change to fit the General Design and Interface Requirements)*

A general distinction will be done between

Power harness	= EMC Class 1
Signal harness	= EMC Class 2
Low level analogue harness	= EMC Class 3
RF harness	= EMC Class 4
Harness tbd	= EMC Class tbd

Distributed in the S/C there are seven sets of harness serving the S/C and experiment payload set:

### 6.1 Spacecraft Harness (1S, 2S, XS, ...)

This harness links the spacecraft electrical lines to the experiment units on the SVM panels  
The harness will be manufactured under Service Module/Instrument/ tbd Responsibility and is only listed partly in the Database for Overview reason

Sometimes for the EPLM this harness is equivalent to T (test) harness

The spacecraft harness will be

- 1S = Primary Power from the S/C
- 2S = Signal Lines from/to the S/C (OBDH, HL Cmd etc)
- XS = Harness from S/C tbd

### 6.2 Test & Checkout Harness (1T, 2T, XT, ...)

This harness will be manufactured under Instrument/tbd Responsibility and connects the Checkout and Test equipment to the EPLM

The Lines will be listed in the database sometimes as S for they are the same as for Checkout and S/C activities

Checkout harness for EQM/EPLM will be a subset of S/C harness

- 1T = Power harness (from SCOE or SVM simulator etc)
- 2T = Signal harness

OBDH Bus

Synchronisation (TBD)

S/C direct lines (Command lines) tbd,

Thermistors and Status acquired by RTU tbd

Checkout lines from the Cryo SCOE to SVM Connector (Umbilical) brackets tbd  
etc

XT = Test harness, EMC Class bd

### 6.3 SVM Panel Harness between units (1P, 2P, 3P, 4P, XP, ...)

This harness interconnects the instrument boxes on the SVM panels directly and will be manufactured under Instrument / tbd responsibility. In the database this harness is only partly listed

1P = Primary Power between boxes (not used tbd)

Heater tbd

2P = Signal Lines as

Secondary Power to other boxes (will be seen as signal)

Serial communication lines (1553)

Direct Command lines between boxes

Analogue and status lines between boxes

3P = Low Level Analogue lines

4P = HF Lines tbd

XP = Special lines tbd

### 6.4 Instrument warm units to SVM Bracket Harness (1B, 2B, 3B, 4B, XB, ...)

This part of harness connects the instrument boxes and the CCU to the connector brackets located on top of the SVM panels. This harness will also be called Warm harness. The harness has to be manufacture under ASED responsibility.

1B = Primary Power to SVM Bracket (not foreseen at the moment tbd)

2B = Signal Lines as

Secondary Power to Optical Bench

Serial communication lines (1553)

Direct Command Lines

Analogue and status acquired by SVM located boxes tbd

CCU lines like

Thermistors, Accelerometers, Level Sensors, Pressure Sensors

Strain gauge, Valve Status Switches, Heaters, Valve Drives

tbd Instrumentation

3B = Low level analogue Signals

Low signal analogue lines from/to Optical Bench and Units outside the CVV

4B = RF lines from SVM Units to OB and others

XB = Special Lines TBD

## 6.5 Interconnecting Cryostat Vacuum Vessel Instrument and CCU Harness (1I, 2I, 3I, 4I, XI, ...)

This harness is linking the SVM Instrument brackets and the Cryostat Control Unit (CCU) Bracket on top of the panels to the feed through connectors and to units/items outside the CVV (BOLA, CCU Instrumentation etc)

This harness is also linking the Units on the CVV (BOLA etc) to the Feed Through Connectors.

1I = Primary power interconnecting harness (not foreseen at the moment)

2I = Signal interconnecting harness

all interconnecting (I) lines are declared as EMC Signal (2) at the moment, a separation has to be done according requirements tbd

3I = Low level analogue signal

4I = RF lines

xI = Special lines tbd (Waveguides)

## 6.6 Cryo Instrument cold Harness (1C, 2C, 3C, 4C, XC, ...)

This is a cold harness inside the CVV linking the feed through connectors to the instruments on the Optical Bench, especially to the Focal Plane units. The harness will be manufactured under ASED responsibility.

The harness will also connect the CCS Instrumentation inside the CVV to the Feed Through Connectors

1C = Primary Power harness inside Cryostat (not foreseen )

2C = Signal harness inside Cryostat

all interconnecting (I) lines are declared as EMC Signal (2) at the moment, a separation has to be done according requirements tbd

3C = Low level analogue Signal inside the Cryostat

4C = RF lines inside the Cryostat

xC = Special Lines tbd (Waveguides)

## 6.7 Focal Plane /Optical Bench Harness (1F, 2F, 3F, 4F, XF, ...)

This cold harness is interconnecting the items on the optical bench and will be manufactured under instrument responsibility. The harness is listed only for overview reasons

1F = Primary Power harness on Optical Bench (not foreseen )

2F = Signal harness on optical bench

all optical bench (F) lines are declared as EMC class Signal (2) at the moment tbd

3F= Low level analogue signal on optical bench (not used tbd)

4F = RF lines on optical bench (not used tbd)

xF = Special Lines on optical bench tbd

## 6.8 List of EMC Category from Database

In the following a list of defined EMC classes for harness separation from the used database.

Not all classes are in use. The ones which are used are crossmarked.

# Pin Allocation List (Harness)

Doc.No.: HP-2-ASED-IC-0001

Issue: Dr Date: 22.02.2002

Sheet: PAL-1 (of 1)

Project: **HERSCHEL**

Connector: 111100 P11A

Function: HIFI FPU Mixer Bias 1 Hor.1

Conn.-Type: MWDM2L-09S-6C3-630

Item: HHFPU

Location: 73 / IOB HIFI

Backshell: TBD

EMC-Category: 2C/Sig Ha FPU-FTH

Note: Signals of different EMC classes are routed via this Connector
