1 Scope

This Interface Control Document (ICD) describes the electrical interfaces of the HERSCHEL Extended Payload Module. (EPLM) PFM.

It will be the overall generic information source for the electrical interfaces.

Interfaces, which are under Experimenter Control (FPU internal Interfaces) or under SVM control (Warm Interconnecting Harness and S/C Interfaces), are not part of this document but particularly listed.

For information management a database (ACCESS based) called CAIE (Computer Aided Interface Engineering) will be used. The HEPLM CAIE Data Base contents provides all the necessary information for supporting the automated verification of the electrical interfaces with (IDAS) an Integrated Data Acquisition System

System information for

- Harness Type
- Routing
- Pin Allocation
- Connectors
- etc

may be derived from this database.

By summarising the electrical interfaces within this document, the ICD will allow a crosscheck of the I/F (harness) design from both sides of an interface. By collecting the interface design description, the ICD will act as a reference for requirement verification and "third-party" interface design (e.g. electrical harness manufacture).

In this way the HERSCHEL EPLM electrical interfaces will be maintained under control.

Actual interface data (as designed/as built), after approval, shall become part of this Interface Control document.

Any change of the ICD contents shall follow the rules of Configuration Control

The ICD presents a database about the electrical interfaces of the Extended Payload Module and its GSE. Interfaces in this context are all input/output interconnections mated via the ASED provided EPLM harness. For any such interface the ICD enables a fast identification of the interface harness design, the actually built interface circuits, and the main electrical parameters.

Within these features the main purpose of the ICD is:

- to act as a reference data base showing the present interface design (as designed/as built)
- to allow a quick compatibility check of any input/output interface interconnection ("on paper integration")
- to act as a supporting data base for the preparation and performance of the electrical/harness integration (IDAS)
- To facilitate failure investigations in the case of interface problems on EPLM level

For a more effective handling and tracing the HEPLM electrical ICD is separated in the following documents.

- Electrical ICD - Main Part HP-2-ASED-IC-0001
- CCH ICD PFM HP-2-ASED-IC -0013
- HIFI SIH ICD PFM HP-2-ASED-IC -0014
- PACS SIH ICD PFM HP-2-ASED-IC -0015
- SPIRE SIH ICD PFM HP-2-ASED-IC -0016

Information given in the main part (HP-2-ASED-0001) are relevant for all sub ICD's.

3 EPLM Harness

The E-PLM harness consists of the following components:

- The **Cryostat Control Harness (CCH)**, including the Telescope Harness for the cryo control instrumentation wiring to the SVM (CCU and PCDU) units. The Cryostat Control Unit (CCU) provides operational access to the cryo system. For that purpose the payload module is equipped with the Cryostat Control Instrumentation (CCI), a set of monitoring and control devices (e.g. temperature sensors, pressure sensors, liquid He valves etc.) which are operated by the CCU via the CCH. In addition, the CCH provides also the electrical interconnection for those CCI devices (e.g. the telescope heaters and the CVV Cover NED) which will be operated directly from the SVM PCDU. The harness between the SVM I/F CB and the SVM PCDU respectively the Umbilical I/F is not part of the H-EPLM cryo harness but part of the SVM harness. The part of the CCH required for the operation of the additional CCI, needed during ground testing and the pre-launch phase only, ends at the SVM I/F CB.
- The **Scientific Instrument Harness (SIH)**, for the interconnection of the HIFI, PACS and SPIRE warm units, mounted within the SVM, with their related instrument cold units accommodated on the Optical Bench Assembly (OBA) within the Cryostat. In addition the electrical interconnections between the SVM mounted HIFI warm unit and the HIFI LOU, mounted externally on the CVV, is part of the SIH. The SIH (as well as the CCH) is especially designed for minimizing thermal losses, which have adverse effects on the cryostat lifetime. In addition, the faint measurement signals, generated by the detectors within the cold Focal Plane Units, have to be protected against any electromagnetic interference on their way via the SIH to the warm units by application of adequate signal grouping and proper shielding.

The CCH as well as the SIH is subdivided into a CVV internal, CVV external and SVM part as also explained in the following table.

	Cryo Control Harness (CCH) - for the cryo control instrumentation wiring to the SVM warm units	Scientific Instrument Harness (SIH) - for the interconnection between the warm and cold units of the HIFI, PACS and SPIRE instruments
CVV Internal	CVV int. CCH Between the CVV internal Cryo Control Instrumentation and the CVV feed through connectors.	CVV int. SIH Between the CVV internal instrument FPU's accommodated on the OBA and the CVV feed through connectors. The connectors at the instrument cold units are EPLM external interfaces.
CVV External	CVV ext. CCH Between the CVV external Cryo Control Instrumentation, the Telescope Instrumentation respectively the CVV feed through connectors and the SVM interface connector bracket. The connectors at the Telescope I/F CB and at the SVM I/F CB towards the PCDU and Umbilical are EPLM external interfaces.	CVV ext. SIH Between the CVV external HIFI LOU respectively the CVV feed through connectors and the SVM interface connector bracket. The connectors at the HIFI LOU are EPLM external interfaces.
SVM	SVM CCH Between the SVM interface connector bracket and the CCU. The power, Mil-bus 1553 B and AR 5 dry-loop connectors of the CCU are EPLM external interfaces.	SVM SIH Between the SVM interface connector bracket and instrument warm units of HIFI, PACS and SPIRE within the SVM. The connectors at the instrument warm units are EPLM external interfaces.

Table 3-1 Cryo Harness main segments and external interfaces

The Harness is further subdivided into individual harness bundles to respect the redundancy requirements as well as to consider the S/S and AIV constraints during integration.

The schematic of the Cryo Harness Segments and their major interfaces are shown in the EPLM electrical system overview below.

In Annex III is a list of defined EMC classes for harness separation as an extract from the used HEPLM CAIE Data Base.

5.4 Cable Type List

In this table the principal used cable types are listed.

The **Cable Code** defines a raw cable category with the following order:

0	diverse
1	single line
2	pair line
3	n-tuple, unshielded
4	single line shielded
5	pair line shielded
6	n-tuple shielded
7	double shielded lines
8	coaxial cables

The **Cable Type** is an abbreviation of the cable description in **Cable Type Name**.

Number of Cores, Twisted, Number of Shields are self explaining columns.

There is a list of defined cable types used in the HEPLM CAIE Data Base in annex IV. Implementation of the manufacturer code into the database is not possible for database internal reasons.

This list is an extract from the used HEPLM CAIE Data Base.

5.5 Cable Characteristic List

In the Cable Characteristic List a deeper specification of the used cable types will be done.

Different gauges of each cable type can be defined.

- Specific Resistance per meter at 293°K (resistance requirement calculation)
- Specific Capacitance per meter
- Cable diameter (routing, bundling)
- Metal Part in cable (thermal calculation)
- Insulation Part in Cable (thermal calculation)
- Specific Weight (harness weight calculation)

As far as yet implemented they can be used for supporting information.

This table is not yet completed and primary used for data base internal reason.

Therefore the cable characteristic list is for information only.

Annex V contains the Cable Characteristic List as an extract from the used HEPLM CAIE Data Base.

5.6 Connector Reference List

The connector reference list contains all used connectors defined in the database.

Annex VI shows the connector reference list as an extract of the HEPLM CAIE Data Base.

5.7 Pin allocation List Harness Side

This list describes the Harness side Connector Pin allocations based on Instrument IIDB's, Harness specifications as well as definition documents with respect to CCH and CCH instrumentation, Only the connectors which are under harness manufacturing responsibility are listed.

For am more effective handling and traceability the list is divided in to the following groups. :

- CCH ICD PFM
- HIFI SIH ICD PFM
- PACS SIH ICD PFM
- SPIRE SIH ICD PFM

The corresponding harness pin allocation lists, which are the major information for harness manufacturing are part of the sub ICD's as pointed out in chapter 6.

6 Sub ICD's

As a major information for the harness manufacturing the documents

- HP-2-ASED-IC-0013
- HP-2-ASED- IC-0014
- HP-2-ASED- IC-0015
- HP-2-ASED- IC-0016

contains the harness pin allocation list for the appropriate harness.
