1 Scope

This Interface Control Document (ICD) describes the electrical Interfaces of the HERSCHEL Extended Payload Module and is the generic information source for all electrical interfaces including the 3 Instruments and the CCS (Cryostat Control System).

Interfaces, which are under Experimenter Control (FPU internal Interfaces) or under Service Module Control (Warm Interconnecting Harness and S/C Interfaces), are not part of this Document but particularly listed.

For Information management a database (ACCESS based) called CAIE (Computer Aided Interface Engineering) will be used. The CAIE Data Base contents provides all the necessary Information for a automated Verification of the electrical Interfaces with Integrated Data Acquisition System (IDAS)

System information's for

- System design as harness weight and type
- used amount of Connector types,
- Routing,
- Channel resistance
- etc

will also be derived from this Data Base

By summarising the electrical interfaces within this document, the ICD will allow a crosscheck of the I/F (harness) design from both sides of an interface. By collecting the interface design description the ICD will act as a reference for requirement verification and "third-party" interface design (e.g. electrical harness manufacture).

In this way the HERSCHEL EQM interfaces will be maintained under control

Actual interface data (as designed/as built), after approval, shall become part of this Interface Control document.

Any change of the ICD contents shall follow the rules of configuration Control

The ICD presents a database about the electrical interfaces of the Engineering Qualification Model and its GSE. Interfaces in this context are all input/output interconnections mated via the ASED provided EQM harness. For any such interface the ICD enables a fast identification of the interface harness design, the actually built interface circuits, and the electrical parameters.

Within these features the main purpose of the ICD is:

- to act as a reference data base showing the present interface design (as designed/as built)
- to allow a quick compatibility check of any input/output interface interconnection ("on paper integration")

- to act as a supporting data base for the preparation and performance of the electrical/harness integration (IDAS)
- To facilitate failure investigations in the case of interface problems on EQM level

The purpose of this document is to reflect the EQM manufacturing baseline

Contents of this issue 1.0 reflects the EPLM status as known at the 15 May 2002

2 Document Reference

2.1 General

The data of the below listed documents of the latest effective issue or the issue as defined below, are integrated as a part of this Interface Control Document (ICD)

In the event of conflict between the below listed documents and this ICD, the conflict shall be brought to the attention of the EPLM subcontractor for clarification.

3 How to use this Document

The EICD comprises the following generic Reports from a database called CAIE_Ac97_v1_49.mdb and LDB

- HERSCHEL Subsystem List (Mechanical and electrical) SSL
- HERSCHEL Item List (Mechanical and Electrical) with Support Equipment IL
- Item Location Code
- EMC Category and Sub Harness Type (Harness separation) EML
- Cable Type and Characteristic List (used cable) CDT
- Cable Characteristic List CCL
- Connector Type List (used connectors) CTL
- Signal Type List STL
- Interface Type List (Common type of interfaces) ICT
- Connector Allocation List CAL
- Functional Channel Allocation List tbd FAL
- Functional Interfaces (Channels) tbd
- Drawings of Interfaces (from to) tbd
- Routing Information (via feed through and brackets, length) tbd
- Pin Allocation List PAL
- Drawing of pin allocation in connector tbd
- Supporting Information
 - Harness Weight according sort criteria
 - Connector weight according sort criteria
 - Used Connector Types
 - Harness/Channel Bundling
 - Information as requested sorted by tbd

After freeze of supporting data only an extract of that database will be used to update the information

This database is called HP-2-ASED-IC-0001 with the according Version No.

The Reports from that database will be

Connector Reference List (ICL)

(Allocated Item, Function, Connector Type, belonging to Harness Cat

Connector Allocation list (CAL)

(Channel Allocation with wiring type and target connector)

Functional Channel Allocation (FAL)

(Source Connector, Channel Information, Wiring, Routing, Target Connector)

Item Listing (IL)

Pin Allocation Connector oriented (PAL)

Used Signal Types with Interfaces (STL)

tbd

4 Subsystem Lists

4.1 General

In this List all the mechanical and electrical Subsystems of the HERSCHEL Project are identified
This includes the HERSCHEL/PLANCK system, the HERSCHEL System, the HERSCHEL Service Module, the (Extended) Payload Module, the Engineering Qualification Mode as well as the mechanical and electrical support Systems like MGSE, EGSE and SCOE's.

The List in general reflects the Work Breakdown Structure HP-1-ASPI-WB-0036, the Product Tree HP-1-ASPI-PT-0012 and the CI Tree from the Company CM2000 System

4.2 Subsystem Listing

S/S-Code	Abbreviation	Subsystem Name
000	H/P	Herschel/Plank System
010	H	Herschel Satellite
020	P	Planck Satellite
100	CFE ITEMS	Herschel CFE Items
110	HIFI	Herschel HIFI Instrument
120	SPIRE	Herschel SPIRE Instrument
130	PACS	Herschel PACS Instrument
140	HTL	Herschel Telescope
145	H	Herschel Telescope GSE
200	EPLM	Herschel Ext.Payl.Module
210	PLM	Herschel Payload Module
211	CSS	Cryostat Structure S/S
212	CHS	Cryostat Helium S/S
213	CIS	Cryostat Insulation S/S
214	CES	Cryostat Electrical S/S
215	ISS	Instrument Secondary Structure
220	TMS	Telescope Module
222	TMS	Delete
230	HSS	Sunshield & Sunshade
231		Sunshield/Sunshade Structure
232		Solar Power Generator
233		Thermal Control
234		Delete
240	PLMSVM IF	PLM/SVM Interface Structure
300	SVM	SVM
310	SVM CB	SVM Connector Bracket
311	HIFISVMCB	HIFI SVM Connector Bracket
312	SPIRESVMCB	SPIRE SVM Connector Bracket

S/S-Code	Abbreviation	Subsystem Name
313	PACSSVMCB	PACS SVM Connector Bracket
314	CCSSVMCB	CCS SVM Con Bracket

562	EQM MGSE	Eng Qual MGSE
563	EQM CVSE	Eng Qual CVSE
564	EQM TESTFA	Eng Qual Test Facility

5 Item List

5.1 General

In order to standardise the subsystem/experiment item identification for electrical interfaces the acronyms as defined in the list below shall be used for item identification within electrical ICD's. This item code identifies each item unequivocally. The item code consists of six digits. The first three digits identify the subsystem (see before), the last three digits identify the item within the subsystem. This includes all mechanical and electrical items in a subsystem (Self-standing parts like Electronic Boxes, brackets etc). Following the PTI the item list contains the same code without the prominent one from the PTI list (under investigation). Items for the EQM are not listed at the moment and not foreseen in this database tbd

Product Identifier

The following numbering system is allocated to the electrical items in the HERSCHEL EPLM system

1xx xxx	HERSCHEL Instruments
2xx xxx	HERSCHEL Extended Payload Module
3xx xxx	HERSCHEL Service Module
4xx xxx	HERSCHEL GSE
5xx xxx	HERSCHEL EQM
11x xxx	HIFI Instrument
12x xxx	SPIRE Instrument
13x xxx	PACS Instrument
xx1 xxx	Items inside the cryostat and on the CVV (Cold Units)
xx2 xxx	Items on the SVM Panels (Warm Units)

For mechanical Items this schematic is not foreseen at the moment

xxx yy unique item identification code

Abreviation

Self explaining Abbreviation for the item

H= HERSCHEL
HH = HERSCHEL HIFI
etc

Item Name

The item name is the more explaining name of the item (then the Abbreviation)

Subsystem

The Subsystem Code (first 3 digits) allocates the item to a subsystem

Abbreviation

Short Code of the Subsystem to which the item belongs

M, E, X

The items will be distinctive according

- only mechanical function M
- item with electrical function E
- isolation function I
- Superordinate System -
- tbd x

Location

The location code will be explained in the chapter xx

5.2 Item List from Datasheet

(to be updated for mechanical items!)

5.3 Item Location Code

For ease item location identification in the HERSCHEL satellite system a location code is allocated to each electrical item which is shown in the table below.

This code will be allocated to each harness plug connector code to support harness manufacturing and integration. System integration and interface test will also benefit from this system.

Location	Meaning
?	not known
10	SVM UMB I/F CB
11	Units on SVM Sidep. 1 (CDMU)
12	Units on SVM Sidep. 2 (RWDE)
13	Units on SVM Sidep. 3 (tbd)
14	Units on SVM Sidep. 4 (Gyro)
15	Units on SVM Sidep. 5 (HIFI 1)
16	Units on SVM Sidep. 6 (HIFI 2)
17	Units on SVM Sidep.7 (SPIRECCU)
18	Units on SVM Sidep. 8 (PACS)
20	SVM I/F CB
21	I/F CB ab. SVM Panel 1 (tbd)
22	I/F CB ab. SVM Panel 2 (RWDE)
23	I/F CB ab. SVM Panel 3 (tbd)
24	I/F CB ab. SVM Panel 4 (Gyro)
25	I/F CB ab. SVM Panel 5 (HIFI1 CB)
26	I/F CB ab. SVM Panel 6 (HIFI2 CB)
27	I/F CB ab. SVM Panel 7 (SPI/CCU CB)
28	I/F CB ab. SVM Panel 8 (PACS)
30	CVV external
31	CVV I/F CB Bottom (CVVLCR)
32	CVV I/F CB Middle (CVVMCR)
33	CVV I/F CB Top PFM (CVVUCR)
34	CVV I/F CB Top EQM
35	CVV ext env Sensor I/F CB
36	NCA

Location	Meaning
40	CVV ext. Components
41	CVV ext. Comp on Struts
42	CVV ext. Comp.on Radiation Shd
43	BOLA
44	LOU
50	CVV internal
51	on lower chains
52	on lower spat framework
53	on Thermal Shield 1 (outer)
54	on Thermal Shield 2 (mid)
55	on Thermal Shield 3 (inner)
56	on upper chains
57	on upper spat framework
60	Helium Tanks
61	on AUX Tank
62	on HOT
63	on Pipework
70	Optical Bench
71	OB lower Side
72	OB upper Side
73	on HIFI FPU
74	on PACS FPU
75	on SPIRE JFET big
76	on SPIRE JFET small
77	on SPIRE FPU

Location	Meaning
80	EPLM Components
81	Sunshield SSD
82	Sunshade SSH
83	Telescope Modul
CSS	Cryo Structure S/S
E1	upper bulkhead
E2	Wave Guides
EL	Electrical Subsystem
GSE	Ground support equip
HAR	Harness
HLS	Higher Level System
I	Insulation
IML	Insulation MLI
INS	Instruments
ITS	Insulat. Therm. Shds
PLM	Pay Load Modul
SAT	Sat Level
SVM	Service Module

6 EMC Classes and Harness Separation

A general distinction will be done between

Power harness	= EMC Class 1
Signal harness	= EMC Class 2
Low level analogue harness	= EMC Class 3
RF harness	= EMC Class 4
Harness tbd	= EMC Class tbd

Distributed in the S/C there are seven sets of harness serving the S/C and experiment payload set:

6.1 Spacecraft Harness (1X, 2X, yX, ...)

(for Data Base reasons the X is replaced by an U and will be updated to X)

This harness links the spacecraft electrical lines to the experiment units on the SVM panels

The harness will be manufactured under Service Module/Instrument/ tbd Responsibility and is only listed partly in the Database for Overview reason

Sometimes for the EPLM this harness is equivalent to T (test) harness

The spacecraft harness will be

- 1X = Primary Power from the S/C
- 2X = Signal Lines from/to the S/C (OBDH, HL Cmd etc)
- XX = Harness from S/C tbd

6.2 Test & Checkout Harness (1T, 2T, XT, ...)

This harness will be manufactured under Instrument/tbd Responsibility and connects the Checkout and Test equipment to the PLM/EPLM

The Lines will be listed in the database sometimes as X (U) for they are the same as for Checkout and S/C activities

Checkout harness for EQM/EPLM will be a subset of S/C harness

- 1T = Power harness (from SCOE or SVM simulator etc)
- 2T = Signal harness
 - OBDH Bus
 - Synchronisation (TBD)
 - S/C direct lines (Command lines) tbd,

Thermistors and Status acquired by RTU tbd

Checkout lines from the Cryo SCOE to SVM Connector (Umbilical) brackets tbd

etc

XT = Test harness, EMC Class tbd

6.3 SVM Panel Harness between units (1W, 2W, 3W, 4W, XW, ...)

This harness interconnects the instrument boxes on the SVM panels directly and will be manufactured under Instrument / tbd responsibility. In the database this harness is only partly listed

1W = Primary Power between boxes (not used tbd)

Heater tbd

2W = Signal Lines as

Secondary Power to other boxes (will be seen as signal)

Serial communication lines (1553)

Direct Command lines between boxes

Analogue and status lines between boxes

3W = Low Level Analogue lines

4W = HF Lines tbd

XW = Special lines tbd

6.4 Instrument warm units to SVM Bracket Harness (1S, 2S, 3S, 4S, XS, .[SIH-Wx])

(For Data Base reasons at the moment listed as B, will be changed to S)

This part of harness connects the instrument boxes and the CCU to the connector brackets located on top of the SVM panels. This harness will also be called Warm harness. The harness has to be manufacture under ASSED responsibility.

1B = Primary Power to SVM Bracket (not foreseen at the moment tbd)

2B = Signal Lines as

Secondary Power to Optical Bench

Serial communication lines (1553)

Direct Command Lines

Analogue and status acquired by SVM located boxes tbd

CCU lines like

Thermistors, Accelerometers, Level Sensors, Pressure Sensors

Strain gauge, Valve Status Switches, Heaters, Valve Drives

tbd Instrumentation

3B = Low level analogue Signals

Low signal analogue lines from/to Optical Bench and Units outside the CVV

4B = RF lines from SVM Units to OB and others

XB = Special Lines TBD

6.5 Interconnecting Cryostat Vacuum Vessel Instrument and CCU Harness (1I, 2I, 3I, 4I, XI, ...[SIH-Ix])

This harness is linking the SVM Instrument brackets and the Cryostat Control Unit (CCU) Bracket on top of the panels to the feed through connectors and to units/items outside the CVV (BOLA, CCU Instrumentation etc)

This harness is also linking the Units on the CVV (BOLA etc) to the Feed Through Connectors.

1I = Primary power interconnecting harness (not foreseen at the moment)

2I = Signal interconnecting harness

all interconnecting (I) lines are declared as EMC Signal (2) at the moment, a separation has to be done according requirements tbd

3I = Low level analogue signal

4I = RF lines

xI = Special lines tbd (Waveguides)

6.6 Cryo Instrument Cold Harness (1C, 2C, 3C, 4C, XC, ...[SIH-Cx])

This is a cold harness inside the CVV linking the feed through connectors to the instruments on the Optical Bench, especially to the Focal Plane units. The harness will be manufactured under ASSED responsibility.

The harness will also connect the CCS Instrumentation inside the CVV to the Feed Through Connectors

1C = Primary Power harness inside Cryostat (not foreseen)

2C = Signal harness inside Cryostat

all interconnecting (I) lines are declared as EMC Signal (2) at the moment, a separation has to be done according requirements tbd

3C = Low level analogue Signal inside the Cryostat

4C = RF lines inside the Cryostat

xC = Special Lines tbd (Waveguides)

6.7 Focal Plane /Optical Bench Harness (1F, 2F, 3F, 4F, XF, ...)

This cold harness is interconnecting the items on the optical bench and will be manufactured under instrument responsibility. The harness is listed only for overview reasons

1F = Primary Power harness on Optical Bench (not foreseen)

2F = Signal harness on optical bench

all optical bench (F) lines are declared as EMC class Signal (2) at the moment tbd

3F= Low level analogue signal on optical bench (not used tbd)

4F = RF lines on optical bench (not used tbd)

xF = Special Lines on optical bench tbd

6.8 Cryo-Harness Branch Identification

Apart from Harness separation by EMC classes a distinction by Harness Branch Identification for the different routing sections will be done. This Identification will be added to connector and Channel Informations in the Data Base.

Branch-ID	Cryo-Harness Branch Identification
	numbers shall be compliant to Instrument numbers
CCH-WE-01	Cryo Control Harness WarmEGSE-01
CCH-WU-01	Cryo Control Harness WarmUMB-01

6.9 List of EMC Category from Database

In following there is a list of defined EMC classes for harness separation.

This list is an extract from the used databaseHP-2-ASED-IC-0001,

EMC-Code	EMC-Abbreviation	EMC-Category	
1	-	Pwr	Power
1	B	PwrBr (will be updated to S)	Pwr Harness to SVM Connector Bracket (S)
1	C	PwrCry (not used)	Pwr Harness in Cryostat (C)
1	F	PwrFPU (not used)	Pwr Harness FPU Intern (F)
1	I	PwrInt	Pwr Harness Feed Through to SVM Connector Bracket (I)
1	S	PwrSC (replaces B)	Pwr Harness Unit to SVM CB (S)
1	T	PwrTes	Pwr Harness Testeq. (T)
1	U	PwrSC	Pwr Harness from S/C C/O (U)
1	W	PwrPan	Pwr Harness on SVM Panels (W)
2	-	SIG	Signal
2	B	SIH Wx (will be updated to S)	Signal Harness Unit to SVM CB (S)
2	C	SIH Cx	Signal Harness FPU to CVV Feed Through
2	F	SigFPU	Signal Harness FPU Internal
2	I	SIH Ix	Signal Harness Feed Through to -SVM CB (I)
2	S	SIH Wx (replaces B)	Signal Harness Unit to SVM CB (S)
2	T	SigTes	Signal Harness Test equipment (T)
2	U	SigSC	Signal Harness from S/C C/O
2	W	SigPan	Signal Harness on SVM Panels (W)
3	-	LLSig	Low Level An. Sig.
4	-	RF	Radio Freq. Sig
5	-	tbd	tbd
6	-	UL	Umbilical Link
7	-	COH	Check-out Harness
8	-	MXD	mixed
9	-	TBD	not known

7 Cable Type List

In this table the principal used cable types are listed. The list is not completed now and will be subject of changes. (Copper cables not yet listed)

The **Cable Code** defines a raw cable category with the following order:

0	diverse
1	single line
2	pair line
3	n-tuple, unshielded
4	single line shielded
5	pair line shielded
6	n-tuple shielded
7	double shielded lines
8	coaxial cables

The **Cable Type** is an abbreviation of the cable description in **Cable Type Name**.

Number of Cores, Twisted, Number of Shields are self explaining columns.

7.1 Cable Type List CTD (Annex 1)

Astrium GmbH		Cable Type List	Doc.No. HP-2-ASED-IC-0001

0	XBS7	4Core, Shd SS +3Core, Shd BS	7	Yes	2	Yes

8 Cable Characteristic List

In the Cable Characteristic List a deeper specification of the used cable types will be done.

Different gauges of each cable type can be defined,

- Specific Resistance per meter at 293°K

- Specific Capacitance per meter

- Cable diameter

- Metal Part in cable (Thermal calculations)

- Insulation Part in Cable (Thermal Calculations)

- Specific Weight

will be used for the supporting information in the Data Base as for an example calculated harness weight, calculated channel resistance, harness bundle diameters etc

8.1 Cable Characteristics CCL (Annex 2)

9 Connector Type List

In this table all Connectors will be used in the System are listed, that means, also the connectors mounted on unit side. Connectors belonging to the harness can be identified by the attached backshell. The amount of each connector type in the Satellite is listed in the row **No. of Con.** and should not be used for ordering information because the connectors under instrument or tbd responsibility are also listed

Information's like connector mass, number of pins and connector shape will be used in the Data Base system for calculating the sum of connector mass, connector pin allocation density and automatic drawing of connector pin allocations

10 Interface Circuit Type List (ICT)

(This list is subject of change because the Interfaces for SPIRE, PACS and the Cryostat Control System are still not complete defined)

This list describes the generic interfaces in the HERSCHEL EQM system and assigns a Interface Code to them with a short description of that Interface.

The interface can be declared as a Driver Circuit or a Receiver Circuit with the needed wire and shield connection to fulfil the functionality of that interface.

Also there is a cross reference to the Specification of that Interface (tbd).

Drawings of the interfaces will be issued in the Document HP-2-ASED-LI-0006

11 Signal Type List

(This list is subject of change because the Interfaces for SPIRE, PACS and the Cryostat Control System are still not complete defined)

This list is a refinement of the generic interfaces list and assigns a Signal Code to the interfaces with a short description of the Signal type.

Each Interface is allocated to a EMC Class as defined in 6.x before. At the moment only signal class 2 (tbc) is allocated to all interfaces.

The used cable type (**wiring**) will be shown in the next row after final definition of type and naming.

The **No. of Lines** defines the amount of signal lines and RTN lines in that cable wiring.

If the Interface requires a shield, the **Shd** column identifies were the shield is connected.

N= Shield not connected

S= Shield connected on source side

T= Shield connected on target side

B= Shield connected on both sides

In the **S/S Code** (see subsystem definition 4.x) an identification will be found to which Subsystem (Instrument or CCS) the interface is allocated to.

Finally there is a reference to a Data sheet and the Interface Definition Document.

12 Connector Allocation List

12.1 Item Connector List (ICL)

The item connector list shows all connector found at unit side. All junctions (J) are listed, even those which are not concerned by the Cold harness (CCH or EMC Cat 2C) or the interconnecting harness from feed through connectors to SVM connector brackets (SIH or EMC Cat 2I) and from the SVMCB to the warm units (EMC Cat 2B) which has to be manufactured under ASED responsibility.

The list is sorted by the item code and defines also the Junction connector type found for the unit side.

All these junction connector are not under ASED responsibility and therefore has to be supplied by the unit manufacturer. Backshells are not applicable inside of a box (only used for harness plugs)

The EMC Category is used for harness separation and is shown at unit side only for information.

13 Functional Channel Allocation

13.1 Channel name List

(Subject of change, not all channels till now listed)

For handling the functional channels in the system each channel will get a channel ID

H and I abbreviation for HIFI channels

S and T abbreviation for SPIRE channels

P and Q abbreviation for PACS channels

C and D abbreviations for CCS channels

Xx abbreviations tbd

13.2 Functional Channel Allocation CCL (Annex 8)

13.3 Functional channels allocated to connector

(Subject of change only HIFI is in!)

Each channel is routed from a source interface connector by wiring via brackets to a target connector

This is shown in the Connector Allocation List. The list shows both sides and is sorted by item/connectors from warm units to cold unit and then from cold unit to warm unit.

After final definition the wiring type will also be shown.

The routing status via the SVM and CVV brackets is predefined and will be subject of change.

13.4 Functional Connector Allocation List CAL (Annex 9)

13.5 Functional Channel Routing List

(Subject of change only HIFI is in!)

The source -target routing via the different connector bracket is shown in the Functional Channel Routing List. This listed is sorted by item/connector for cold units to warm units and vice versa

After final definition the wiring type will also be shown.

The routing status via the SVM and CVV brackets is preliminary and will be subject of change.

13.6 Functional Channel Routing List ChRL (Annex 10)

14 Pin allocation List Item Side (IPA)

(Subject of change)

This list describes the Unit Connector Pin allocations based on Instrument IIDB and Harness specifications

14.1 Pin allocation item side IPA (Annex 11)

Astrium GmbH	Pin Allocation List (Item)	Doc.No.: HP-2-ASED-IC-0001
Project: HERSCHEL		Issue: 01 Date: 15.05.2002 Sheet: IPA-1 (of 86)

Connector: 111100 J01

Function: HIFI FPU IF1-H

Item: HHFPU

Location: 73 / on HIFI FPU

Conn.-Type: Coax Pin tbd

EMC-Category: 2C/SigHa FPU-CVV FeedTh

Backshell: N/A

Pin	Signal Designation	Interface-Code		Ch. ID	Grouping:		Comment	New
		Circuit	Signal Pos.		Shd	Cable Twist		
-	TBD							

Astrium GmbH	Pin Allocation List (Item)	Doc.No.: HP-2-ASED-IC-0001
Project: HERSCHEL		Issue: 01 Date: 15.05.2002 Sheet: IPA-2 (of 86)

Connector: 111100 J02

Function: HIFI FPU IF2-H

Item: HHFPU

Location: 73 / on HIFI FPU

Conn.-Type: Coax Pin tbd

EMC-Category: 2C/SigHa FPU-CVV FeedTh

Backshell: N/A

Pin	Signal Designation	Interface-Code		Ch. ID	Grouping:		Comment	New
		Circuit	Signal Pos.		Shd	Cable Twist		
-	TBD							

Astrium GmbH	Pin Allocation List (Item)	Doc.No.: HP-2-ASED-IC-0001
Project: HERSCHEL		Issue: 01 Date: 15.05.2002 Sheet: IPA-3 (of 86)

Connector: 111100 J11 **Function:** HIFI FPU Mixer Bias 1 Hor.
Item: HHFPU
Location: 73 / on HIFI FPU **Conn.-Type:** MDM09P
EMC-Category: 2C/SigHa FPU-CVV FeedTh **Backshell:** N/A

15 Pin allocation List Harness Side

(Subject of change)

This list describes the Harness Connector Pin allocations based on Instrument IIDB and Harness specifications.

This list will be the basic input for harness manufacturing.

15.1 Pin Allocation Harness Side PAL (Annex 12)

Astrium GmbH

Project: HERSCHEL

Pin Allocation List (Harness)

Doc.No.: HP-2-ASED-IC-0001

Issue: 01 Date: 15.05.2002

Sheet: PAL-1 (of 93)

Connector: 111100 P01

Function: HIFI FPU IF1-H

Conn.-Type: Coax Socket tbd

Item: HHFPU

Location: 73 / on HIFI FPU

Backshell: TBC

EMC-Category: 2C/SigHa FPU-CVV FeedTh

Pin	Signal Designation	Interface-Code			Ch. ID	Wiring	Grouping:			Comment	Target-Item	Location	Connector	Pin	New
		Circuit	Signal	Pos.			Shd	Cable	Twist						
-	TBD

16 Pin allocation End to End

(Should be in a separate document (over 900 pages in total))

This list describes the Harness Pin allocations from source to target in both directions based on Instrument IIDB and Harness specifications.

This list will be the basic input for harness manufacturing and testing

16.1 Pin allocation end to end EPA (Annex 13)

Pin Allocation List

(End-To-End)

Doc.No.: HP-2-ASED-IC-0001

Issue: 01 Date: 15.05.2002

Sheet: EPA-127

Connector: 112300 P26

Item: HHFCU

EMC-Category: 2B/SigHa Box-SVMConBr

Function: HIFI FCU Chop. Cal. Therm Red.

Location: 16 / Units on SVM Sidep. 6 (HIFI 2)

Note: Signals of different EMC classes are routed via this Connect

Conn.-Type: DCMA-62S-NMB-FO+Glen 5

Backshell: TBC

Function: CCU I/F 17 to CCS
Location: 17 / Units on SVM Sidep.7 (SPIRECCU)

Conn.-Type: DDMA-50S-NMB-FO+ Glen 5
Backshell: TBD

Pin Allocations TBD

Astrium GmbH	<h2>Pin Allocation List</h2> <p>(End-To-End)</p>	Doc.No.: HP-2-ASED-IC-0001
Project: HERSCHEL		Issue: 01 Date: 15.05.2002
		Sheet: EPA-671

Connector: 214100 P18

Function: CCU I/F 18 to CCS

Conn.-Type: DDMA-50S-NMB-FO+ Glen 5

Item: CCU

Location: 17 / Units on SVM Sidep.7 (SPIRECCU)

Backshell: TBD

EMC-Category: 2B/SigHa Box-SVMConBr

Pin Allocations TBD
