1. INTRODUCTION

This document specifies the necessary steps to execute a COLD SPIRE functional test during ILT test campaigns. It currently applies to the PFM model of SPIRE but it can be applied to further models as a minimum set of tests to verify the instrument correct functioning prior to cold performance testing.

1.1 SCOPE

To judge the success or failure of a warm functional test by checking that:

- The telecommand sequence generated for a particular functional test is correctly received and executed on board by the SPIRE DPU.
- No error/event reports or command failures are generated during the execution of these commands.
- Telemetry is generated by the instrument as a result of telemetry requests to its different subunits.
- Particular telemetry parameters for each functional test change in an expected manner.
- A particular success criterion (specified in this document) is met.

2. FUNCTIONAL TEST CONFIGURATION

2.1 Software Configuration

Write down in the table the current EGSE software configuration for the tests:

EGSE component	Version/Build number	Comment
SCOS2000		
HCSS		
QLA		
QLA scripts		
Test Control scripts		
CUS Scripts		

2.2 EGSE Configuration Checks

To check for the success of failure of a functional test, the real time telemetry of the instrument has to be monitored. The following applications must be running to do so. Before the test sequence starts, make the following checks:

Workstation	EGSE component	Status	Check
Lichfield	EGSE router	Started	✓
Lichfield	EGSE Gateway	Started	
Lichfield	Telemetry Ingestion	Started	
Lichfield	Packet Display	Started	
Lincoln	SCOS2000	Started	
Lincoln	EXIF + TOPE	Started	
Lincoln	Manual Stack	Started	
Gordon	CDMS Simulator	Started	
Lincoln	Test Control Server	Started	

Note: Despite restarting the CDMS simulator there is still ~ 30 seconds disagreement between the the THSK value that SCOS shows and the time reported by QLA (QLA is 31 seconds behind) on its packet receiver window (this time time actually agrees with the time that PacketDisplay shows on the time column) ?? two java applications showing 31 seconds delay (= current difference between UTC and TAI).

2.3 SPIRE Instrument Configuration

The functional test flow is such that at a given time during the procedure is possible that the instrument configuration does not conform to any nominal configuration as specified in Annexe 1. Nevertheless the configuration prior and after a test is specified for each functional test, and were applicable and the instrument configuration is in accordance to Anexe1, this will be denoted by showing the main configuration in blue bold font and any additional information in black.

The **initial** instrument configuration for these tests should be SPIRE **DRCU_ON** + DC and AC Thermometry ON.

Perform the following actions to ensure that the instrument is in the correct configuration for the tests.

Step#	Action	Comments	Check
1	In SCOS open DPU_AND_OBS_PARAMETERS display Check if : TM2N is incrementing by one @1Hz. TM1N is incrementing by one @0.5Hz. - If they are, go to step 5. - If only TM2N is incrementing it means that the critical HK report request has been stopped, go to step5. - If they are not, go to step 2.		
2	Check if the DPU is powered ON: - If ON, the DPU power supply LCD will show ~ 28V and 0.40A, go to step 4. - If not ON, refer to RD2, then go to step 3.		
3	In SCOS open Boot_ROM_Memory_Check display and check no errors are reported: - If no errors are reported, execute DPU_ON from HCSS Test Procedures. Then repeat step 1. - If the (5,2) contains errors: Check the error code in RD07. Then switch OFF the DPU and repeat step 2		
4	Execute define_new_HK_report.tcl HCSS Test procedure. Repeat step 1.		
5	In SCOS open SCU_PARAMETERS display - Check SCUP5V/P9V/M9V In SCOS open BIAS_PARAMETERS display - Check BIASTEMP, BIASP9V,BIASM9V,BIASP5V Go to step 6.		
6	In SCOS open DPU_AND_OBS_PARAMETERS display - Check MODE HK parameter, it should be DRCU_ON (RAW=0x100)

3. TEST PROCEDURE

The following two sections describe general pass/fail criteria (Section 3.1), the general test layout (Section 3.1) and the detailed procedure for each functional test (Section 3.2).

3.1 GENERAL PASS/FAIL CRITERIA

The general criteria for declaring a single test failed is the repeated failure of 2 consecutive runs of this test. In that case the functional test procedure should be aborted and the overall functional testing declared FAILED.

In the case of a 'first run' failure followed by a successful execution a third run of the same test should be performed and in the unlikely event of this third run being a failure the test procedure should be also aborted and the overall functional testing declared FAILED, as this would imply a not reliable operability of the instrument.

As a general remark ANY failure should be closely analyzed.

Note: If the functional test is declared FAILED refer to section 4.1 for instrument switch OFF.

3.2 GENERAL TEST PROCEDURE LAYOUT

The table below shows the general CFT sequence as it should be performed. In each step of this procedure the operator should refer to the detailed procedure in Section 3.2. Test Control TCL scripts are available to invoke the correspondent CUS script stored in the HCSS database for each functional test. These CUS scripts will generate the appropriate command sequence for the particular functional test.

Test Id:	FUNC-DCU-13P
Test Purpose:	Photometer Detectors Check
Initial Configuration:	DRCU_ON + AC/DC thermometry ON+MCU ON+ Photometer LIAs ON + Photometer BIAS ON +Photometer JFETs ON
Final Configuration:	DRCU_ON + AC/DC thermometry ON+MCU ON+ Photometer LIAs ON + Photometer BIAS ON +Photometer JFETs ON
Success Criteria:	Test passed if : The photometer detectors show a small linear variation on the output voltage when different bias is applied through the load curve.

Test Procedure:

Step#	Action
1	On QLA bring up a time series display of a couple of pixels on each of the photometer BDAs
2	Run FUNC-DCU-13P test procedure from the HCSS Test Procedure window on TOPE
3	Contingency: If test fails repeat step 1 and 2.

Test Log:

3.3.25 FUNC-DCU-04S

Test Id:	FUNC-DCU-04S
Test Purpose:	Spectrometer LIAs Integrity Check
Initial Configuration:	DRCU_ON + AC/DC thermometry ON+MCU ON
Final Configuration:	DRCU_ON + AC/DC thermometry ON+MCU ON + Spectrometer LIAs ON
Success Criteria:	Test passed if : <ol style="list-style-type: none"> SCUDCDCSTAT parameter goes from 4 to 6. Spectrometer LIA card voltages are showing correct readings of +5V,+9V,-9V. Spectrometer LIA temperatures show an increase indicating that they are ON.

Test Procedure:

Step#	Action
1	On QLA bring up a time series display of the HK parameters: SLIAP5V SLIAP9V SLIAM9V LIAS1/2/3TEMP
2	Run FUNC-DCU-04S test procedure from the HCSS Test Procedure window on TOPE
5	Contingency: If test fails repeat steps 1 and 2.

3.3.26 FUNC-DCU-11S

Test Id:	FUNC-DCU-11S
Test Purpose:	Spectrometer BDAs switch ON check
Initial Configuration:	DRCU_ON + AC/DC thermometry ON+MCU ON + Spectrometer LIAs ON
Final Configuration:	DRCU_ON + AC/DC thermometry ON+MCU ON + Spectrometer LIAs ON + Spectrometer BIAS ON + Spectrometer JFETs ON
Success Criteria:	Test passed if SCUDCDCSTAT goes from 4 to 6, Spectrometer LIAs voltages are correct and SJFET voltages are also correct.

Test Procedure:

Step#	Action
1	Run FUNC-DCU-11S test procedure from the HCSS Test Procedure window on TOPE
2	After the test Write down the values RAW and converted values of: LIASTAT SLIAP5V, SLIAP9V, SLIAN9V, SSWJFETSTAT,SLWJFETSTAT, SSWJFET1V,SLWJFET2V located in DCU PARAMETERS AND
3	Contingency: If test fails repeat steps 1 and 2.

4. END TEST SEQUENCE

4.1 NORMAL END TEST SEQUENCE

The following table shows the necessary steps to be followed to end the warm functional test sequence.

Step#	Action	HK parameters	Expected Value	Comments	Check
1	Check BSM is OFF	CHOPSENSPWR JIGGSENSPWR	0 0		
2	Check SMEC is OFF	SMECENC PWR	0		
3	Run MCU-OFF from the HCSS Test Procedure window on TOPE	SCUDCDCSTAT	0		
4	Check Instrument Configuration	MODE	0x100/ DRCU_ON		
5*	Run SCU_OFF from the HCSS Test Procedure window on TOPE	SCUDCDCSTAT SUBKSTAT	0 0		
6*	Run DRCU_OFF from the HCSS Test Procedure window on TOPE	MODE	0/ DPU_ON		

* These two steps should ONLY be executed if the functional test takes place BEFORE the instrument is placed in the test cryostat. If the instrument is already in the cryostat and the cryo-harness are connected this steps should NOT be executed.

FINAL INSTRUMENT CONFIGURATION IN THE CASE STEPS 1 to 4 are executed is DRCU_ON

FINAL INSTRUMENT CONFIGURATION IN THE CASE STEPS 1 to 6 are executed is DPU_ON

4.2 END TEST SEQUENCE WHEN THE FUNCTIONAL TEST HAS FAILED

The following table shows the necessary steps to be followed to end the warm functional test sequence when this has been declared failed.

Step#	Action	HK parameters	Expected Value	Comments	Check
1	Check BSM is OFF	CHOPSENSPWR JIGGSENSPWR	0 0		
2	Check SMEC is	SMECENC PWR	0
