SPIRE RE Most Emissive Mode EMC Test Procedures for IST Issue 1.0

Approved by

1. Introduction

This document describes the SPIRE procedures to be used for IST Radiative Emissions EMC testing in the most emissive mode. The transition to and from the mode for the measurements is as follows:

- **OFF to STBY.** Note that the **STBY** mode is known as **REDY** mode in **SPIRE** terminology. In this mode only SPIRE HK is being generated.
- **STBY to “PHOTOPS”**, where “PHOTOPS” refers to a dummy mode where SPIRE is Prime Instrument and generating both Photometer and MCU science as well as HK data at the nominal data rate. **SPIRE should be in this mode for the duration of the EMC RE tests.**
- **“PHOTOPS” to STBY**
- **STBY to OFF**

Since these procedures use standalone TCL scripts they do not require initiation from the I-EGSE, although the I-EGSE will be used to monitor the progress of the tests and to archive test data.

2. Test Configuration

The main differences between the AVM and the FM configurations are with respect to the hardware. On the SPIRE AVM hardware the Warm Units and the FPU are substituted by a DRCU simulator.

2.1 FM Test Configuration

This is the required configuration prior to the start of the test:

SPIRE WU:

- The SPIRE FM DRCU should be interconnected with the SPIRE FM DPU, both PRIME and REDUNDANT interfaces.
- The SPIRE FM DRCU NOMINAL and REDUNDANT power interfaces to the Herschel satellite should be connected.
- The SPIRE FM DPU NOMINAL and REDUNDANT 1553 interfaces to the Herschel satellite should be connected.
- The SPIRE FM DPU NOMINAL and REDUNDANT power interfaces to the Herschel satellite should be connected.

HCDMU:

- The Bus list selected on the HCDMU should be as appropriate for the planned activity. If SPIRE is to put into an "Operations" mode then bus list should be for SPIRE Prime Instrument, (i.e., 27 TM slots allocated for SPIRE telemetry). For the NOMINAL side tests the BUS Configuration should be SPIRE Nominal (i.e, RT=21) and for the REDUNDANT side test the BUS Configuration should be SPIRE Redundant (i.e, RT=22).
- The HCDMU and CCS should be interconnected.

CCS:

- The SPIRE MIB should be imported on the CCS.

3. IST EMC Procedures Overview

3.1 General instructions for executing the test procedures

- Section 3.2 of this document specifies the sequence to be executed. Each of the steps in the sequence has a detailed specification in section 4.
- The detailed procedures in section 4 include blank boxes where the actual values of parameters can be noted. Based on the comparison with the expected values the success or failure of a step should be recorded in the final column of the table.
- The last row in a procedure table should be used to record the overall Pass/Fail result of each test.
- In general any text in boldface in the procedural steps indicates an action which may have to be performed manually by the CCS staff.

3.2 Test Sequences

3.2.1 EMC Test Sequence

This section specifies the sequence to be executed for switching between OFF and PHOTOPS modes. Maximum estimated times for executing a test sequence are also given.

Procedure Name	Purpose	Duration
<u>SPIRE-IST-EMC-RE-OFF-TO-STBY</u>	To switch SPIRE from OFF to STBY mode	~5 min
<u>SPIRE-IST-EMC-RE-STBY-TO-PHOTOPS</u>	To switch SPIRE from STBY to “PHOTOPS” mode	~5 min
<u>SPIRE-IST-EMC-RE-PHOTOPS-TO-STBY</u>	To switch SPIRE from “PHOTOPS” to STBY mode	~5 min
<u>SPIRE-IST-EMC-RE-STBY-TO-OFF</u>	To switch SPIRE from STBY to OFF	~5 min

Total: ~ 20 min

4. Detailed IST EMC RE Procedures

4.1 Procedures

4.1.1 Procedure SPIRE-IST-EMC-RE-OFF-TO-STBY

Version	1.0
Date	31st July 2007
Purpose	To switch the SPIRE instrument from OFF to STBY mode
Initial configuration	SPIRE DPU and DRCU are switched off
Final configuration	SPIRE is in STBY mode: <ul style="list-style-type: none"> • SPIRE DPU and DRCU are on • Generating Nominal HK reports at 4 second intervals • Generating Critical HK reports at 2 second intervals
Preconditions	<ul style="list-style-type: none"> • SPIRE FM DPU and DRCU are electrically integrated with the Herschel Satellite • SPIRE MIB is imported in the CCS database. • CCS is up and running • DPU AND OBS PARAMETERS AND is selected on the CCS • SFT PARAMETERS AND is selected on the CCS
Duration	5 minutes
Pass/Fail criteria	Nominal and Critical HK reports start being generated at their nominal rates of 0.25Hz and 0.5Hz respectively.

Step	Description	Parameter	Expected Values Before/After	Actual Values Before/After	Pass/Fail
1	Power ON the SPIRE DPU NOMINAL unit using the dedicated spacecraft LCL line and configure 1553 Spacecraft bus for SPIRE DPU (RT = 21)	—	—	—	
2	Wait for the boot software to produce at least 2 event packets (5,1)	—	—	—	
3	Execute TCL script SPIRE-IST-DBG-OFF2DPUON.tcl – Issue 1.2	—	—	—	

Spire Procedure

4	Nominal and Critical HK packets should arrive at the CCS for 30 seconds: SPIRE Nominal HK: <ul style="list-style-type: none"> • (type ,subtype) : (3,25) • APID : 0x502 SPIRE Critical HK: <ul style="list-style-type: none"> • (type ,subtype) : (3,25) • APID: 0x500 	—	—	—	
5	For this 30 second period check that TM1N and TM2N parameters incremented as indicated	TM1N TM2N	@ 0.5Hz @ 1Hz	—	
6	After this 30 second interval check that all HK TM reception has stopped	TM1N TM2N	Not incrementing Not incrementing	— —	
7	Power ON the SPIRE DRCU NOMINAL unit using the dedicated spacecraft LCL line.	—	—	—	
8	Execute TCL script SPIRE-IST-DBG-DPUON2STBY.tcl – Issue 1.3	—	—	—	
9	Check that the THSK parameter is refreshing every 4 seconds	THSK	Refreshing @ 0.25Hz	—

Step	Description	Parameter	Expected Values Before/After	Actual Values Before/After	Pass/Fail
10	Check that TM1N and TM2N parameters are incrementing as indicated	TM1N	Incrementing by 2 every 4 seconds	—	
		TM2N	Incrementing by one every 4 seconds	—	
11	Check that the DRCU parameters show nominal values.	SCUP5V	~ 5.2 ± 0.5V		
		SCUP9V	~ 9.0 ± 0.2V		
		SCUM9V	~ -9.0 ± 0.2V		
		BIASP5V	~ 5.1 ± 0.5V		
		BIASP9V	~ 9.0 ± 0.2V		
		BIASM9V	~ -9.0 ± 0.2V		
		MCUBITSTAT	0/1		
		MCUP5V	~ 5.0 ± 0.3V		
		MCUP14V	~ 14.0 ± 0.6V		
		MCUM14V	~ -14.0 ± 0.6V		
	MCUP15V	~ 15.0 ± 0.6V			
	MCUM15V	~ -15.0 ± 0.7V			
12	Check that SPIRE is in REDY mode	MODE	DRCU_ON/REDY		

Test Result (Pass/Fail):

4.1.2 Procedure SPIRE-IST-EMC-RE-STBY-TO-PHOTOPS

Version	1.0
Date	25 th March 2008
Purpose	To switch SPIRE from STBY to “PHOTOPS” mode
Initial configuration	<ul style="list-style-type: none"> • SPIRE DPU and DRCU are ON • SPIRE is in REDY mode
Final configuration	SPIRE is Prime Instrument and in “PHOTOPS” mode: <ul style="list-style-type: none"> • Generating critical and nominal HK at 0.5Hz and 1Hz respectively • Photometer LIAs are switched on • BSM and SMEC sensors are switched on • Generating photometer data at ~ 18 packets/s • Generating MCU Eng data at 2 packets/s
Preconditions	<ul style="list-style-type: none"> • SPIRE MIB is imported in the CCS database. • CCS is up and running • DPU AND OBS PARAMETERS and FUNCTIONAL TEST PARAMETERS ANDs are selected on the CCS
Duration	10 minutes
Pass/Fail criteria	SPIRE is Prime Instrument and in “PHOTOPS” mode: <ul style="list-style-type: none"> • Generating critical and nominal HK at 0.5Hz and 1Hz respectively • Generating Photometer and MCU engineering data at ~ 18 packets/s and 2 packets/s respectively

Step	Description	Parameter	Expected Values Before/After	Actual Values Before/After	Success/Failure
1.	Execute TCL script SPIRE-IST-EMC-RE-STBY2PHOTOPS.tcl – Issue 1.1	—	—	—	
2.	Check that THSK parameter is refreshing every second	THSK	Refreshing @ 1Hz	—	
3.	Check that TM1N and TM2N parameters are incrementing as indicated	TM1N TM2N	@ 0.5Hz @ 1Hz	—
