

Monitor dump of SPIRE DPU PRAM memory area
 File: H_FCP_OBS_5142.xls
 Author Liviu Stefanov

Procedure Summary

Objectives

This Herschel OBSM nominal procedure is used to perform the dump monitoring of one or several SPIRE DPU PRAM memory areas. The memory dump is commanded using TC(6,5) and the memory locations content is received on ground in TM(6,6) packets.

The procedure assumes that the command stack has already been generated using the OBSM system and is ready for loading on the Manual Stack. The command stack generation activity is not covered by this procedure.

Summary of Constraints

CDMU in Operational Mode

- SPIRE DPU is ON
- SPIRE ASW running

Memory areas are dumped through TC(6,5); this TC will be delayed when there is an ongoing:

- TC(6,2) Load Memory Using Absolute Addresses
- TC(6,5) Dump Memory Using Absolute Addresses
- TC(6,9) Check Memory Using Absolute Addresses
- TC(8,4,1,1) Copy Memory

Spacecraft Configuration

Start of Procedure

CDMU in Operational Mode

- SPIRE DPU is ON
- SPIRE ASW running

End of Procedure

Same as start
