# 1 INTRODUCTION

## 1.1 SCOPE

This document specifies the requirements for the development of the Orbit data File (ODF) calibration software, transferring Level 1b ODF data towards Level 2. The software shall analyze radio ranging tracking data recorded at the DSN ground stations.

## 1.2 REFERENCED DOCUMENTS

|     | Reference Number    | Title                                | Issue Number | Date       |

|     |                     |                                      |              |            |

## 1.3 SOFTWARE CONFIGURATION CONTROL

This document addresses the software package

**DSN\_ODF\_PROC\_RNG\_L1B\_TO\_L02**  
**Version 1.0**

After release, the software is under configuration control which will be documented in this section.

| Version number | Changes/Action | New version | Release date |
|----------------|----------------|-------------|--------------|
|                |                |             |              |
|                |                |             |              |
|                |                |             |              |
|                |                |             |              |

**1.4 ACTION ITEM LIST**

| Action item | Description   | Due date   | actioneer | closed |
|-------------|---|------------|-----------|--------|
| 1           | Correct range output format   | 04.04.2005 | MF        | Closed |
| 2           | Create web interface to select individually tracking ranges from the L1B input file | 04.04.2005 | MF/TA     | Closed |
| 3           | Include Data Flow Diagram   | 04.05.2005 | MF/TA     |        |

## 2 SPECIFICATIONS FOR LEVEL 1B TO LEVEL 2 CALIBRATION

### 2.1 MAIN PROGRAM SPECIFICATIONS

#### 2.1.1 General specifications

**ODFRNG-SPEC-2110:** This software shall

- Read Level 1b ODF data
- Apply Earth troposphere calibration to the range data
- Compute differential range values if two frequencies are available
- Apply plasma calibration to the range data by using differential frequency data
- Apply the range predicts in order to compute residuals
- Output the results as level 2 data
- Generate PDS label files for the output files

**ODFRNG-SPEC-2120:** the software language is FORTRAN.

**ODFRNG-SPEC-2122:** The kind of data processing as

- (a) gravity,
- (b) solar corona

is selected via a web interface.

#### 2.1.2 Definition of constants

**ODFRNG-DEF-2130:** ASTRONOMICAL UNIT (AU)

$$1 \text{ AU} = 149,597,870 \text{ kilometers}$$

**ODFRNG-DEF-2140:** SPEED OF LIGHT

$$c = 299,792,458 \text{ m/s}$$

**ODFRNG-DEF-2150:** RANGE UNIT (RU)

$$1 \text{ RU} = 0.30 \text{ m}$$

**ODFRNG-DEF-2152: PHYSICAL CONSTANTS**

| Constant                |   | Value                    | SI units   |
|-------------------------|---|--------------------------|--|
| Electron charge         | e   | 1.6022 10 <sup>-19</sup> | A s  |
| Electron mass           | m <sub>e</sub>  | 9.1094 10 <sup>-31</sup> | kg   |
| Electric field constant | ε <sub>0</sub>  | 8.8542 10 <sup>-12</sup> | s <sup>4</sup> A <sup>2</sup> m <sup>-3</sup> kg <sup>-1</sup> |
| Plasma constant         | $\frac{1}{2} \frac{1}{4\pi^2} \frac{e^2}{m_e \epsilon_0}$ | 40.30924                 | m <sup>3</sup> s <sup>-2</sup>                                 |

**ODFRNG-DEF-2160: CARRIER FREQUENCIES Mars Express**

Mars Express:

| frequency band | uplink       | downlink     |
|----------------|--------------|--------------|
| S-band         | 2114.676 MHz | 2296.482 MHz |
| X-band         | 7116.936 MHz | 8420.432 MHz |

**ODFRNG-SPEC-2170: Transponder constants and ratios**

Mars Express:

| frequency band uplink | transponder ratios downlink/uplink |         |
|-----------------------|------------------------------------|---------|
|                       | S-band                             | X-band  |
| S-band                | 240/211                            | 880/211 |
| X-band                | 240/749                            | 880/749 |

**ODFRNG-SPEC-2180: Transponder delay values**

This is defined as Table TRANSPONDER\_CAL

Transponder 1: at 25 °C Temperature

| frequency band uplink | transponder range delay (nanoseconds) |        |
|-----------------------|---------------------------------------|--------|
|                       | S-band                                | X-band |
| S-band                | 2025                                  | 2013   |
| X-band                | 2018                                  | 2010   |

Transponder 2:

| frequency band uplink | transponder range delay<br>(nanoseconds) |        |
|-----------------------|--|--------|
|                       | S-band                                   | X-band |
| S-band                | 2032                                     | 2015   |
| X-band                | 2025                                     | 2015   |

**ODFRNG-DEF-2190:** DSN station range calibration

The ODF range values Level 1b are already calibrated with respect to the equipment delay and the antenna z-correction.

## 2.2 INPUT FILES

### 2.2.1 Data file types

**ODFRNG-SPEC-2210:** the following table defines the input file types and the logical file names used in this specification and within the software:

| File Description               | Logical name within program |
|--------------------------------|-----------------------------|
| S-band ranging                 | ODF_RNG_S                   |
| X-band ranging                 | ODF_RNG_X                   |
|                                |                             |

**ODFRNG-SPEC-2212:** input file names will be accepted via a Windows interface.

### 2.2.2 File names

**ODFRNG-SPEC-2220** Level 1b file names are defined in [1] section 4.1

For the range files:

**r00ODF0L1B\_RNS\_yyddhhmm\_qq.TAB**  
**r00ODF0L1B\_RNX\_yyddhhmm\_qq.TAB**

for the meteorological file:

**rggDSN0L1B\_MET\_yyddhhmm\_qq.TAB**

For the predict file:

**rggUNBWL02\_RTW\_yyddhhmm\_qq.TAB**

### 2.2.3 File formats

**ODFRNG-SPEC-2230:** File formats are defined in [1] and [3].

**ODFRNG-SPEC-2240:** DSN station ID

A DSN ODF file contains data of several days and from different DSN ground stations.

DSN station: the DSN station ID is stored in column 6 of ODF\_RNG\_S and ODF\_RNG\_X. It is transferred as DSN\_STATION\_ID to M\_RANGE\_OUTPUT and used to create the output file name defined in ODFRNG-SPEC-2760

**ODFRNG-SPEC-2050:** selection of DSN tracking times

A DSN ODF file contains data of several days and from different DSN ground stations.

One or more input data time ranges from one or several specific and individual DSN ground stations are selected via a web-interface. Only these data are read in, analyzed according to this specification and transferred to M\_RANGE\_OUTPUT.

As many output files are created as many individual tracking time ranges have been selected. The start date and time of the input data are used as the time in the output file name defined in ODFRNG-SPEC-2760.

The individual tracking time ranges are selected in Modul M\_TRACKING\_TIME and specified in ODFRNG-SPEC-2310.

## 2.3 LEVEL 1B TO LEVEL 2 SOFTWARE SPECIFICATIONS

### 2.3.1 MODULE M PREDICT

PREDICT accepts two Doppler predict files: (a) the predict file PREDICT\_FILE considering all possible perturbing forces like the best known gravity field and radiation pressure and (b) the predict file considering radiation pressure and the gravity field up to degree and order 10 PREDICT\_FILE\_10. PREDICT interpolates for a given time stamp between the predicted or reconstructed parameters and returns a predicted or reconstructed parameter for each observed time stamp. This is done for each frequency band.

PREDICT will also be used for the reconstructed orbit file, replacing then PREDICT\_FILE in the processing.

**ODFRNG-SPEC-2210:** PREDICT accepts input data from PREDICT\_FILE and PREDICT\_FILE\_10 with the file name format defined in [1] section 8.1 or in [1] section 8.2 for the predicted orbit or the reconstructed orbit file, respectively. PREDICT\_FILE is either a two-way or an one-way file, PREDICT\_FILE\_10 is always a two-way file.

**ODFRNG-SPEC-2220:** PREDICT accepts predicted Doppler data from PREDICT\_FILE and PREDICT\_FILE\_10 (file name specified in ODFRNG-SPEC-2210) formatted as defined in [1] section 8.1 or in [1] section 8.2 for the predicted orbit or the reconstructed orbit file, respectively.

**ODFRNG-SPEC-2225:** PREDICT\_FILE and PREDICT\_FILE\_10 cover tbd days of data. Predicts or orbit reconstruction shall be provided

- at steps of one degree true anomaly along the planetary orbit.
- At steps of one hour for the interplanetary cruise phase

**ODFRNG-SPEC-2230:** PREDICT accepts from DOPPLER the array TIME\_DOPPLER representing the observed Doppler time stamps. PREDICT interpolates between each predicted or reconstructed parameter of PREDICT\_FILE and PREDICT\_FILE\_10 for each observed time stamp given as TIME\_DOPPLER. This is done for each frequency band.

**ODFRNG-SPEC-2240:** The interpolated results will be available as the arrays DOPPLER\_PRE and DOPPLER\_PRE\_10 for subroutine RESIDUAL\_DOPPLER. The arrays are transferred to the subroutine DOPPLER\_OUTPUT and are stored in column 7 and 8, respectively. This is done for each frequency band.

### **2.3.2 Modul M TRACKING TIME**

ODFRNG-SPEC-2310 : ordering of input files

A DSN ODF file contains data of several days and several DSN antennas. The input files ODF\_RNG\_X and ODF\_RNG\_S are ordered sequentially after

1. Ground station
2. recording time
3. sample rate

ODFRNG-SPEC-2320: selection of tracking times

The number of DSN activities, the ground stations and associated tracking times are selected via a web interface.

ODFRNG-SPEC-2330: output files

For each selected individual activity an output file is created (for each downlink frequency). The format of the output files is specified in ODFRNG-SPEC-2780 and 2781.

### 2.3.3 Module M Range

#### 2.3.3.1 *Subroutine Calibration*

RANGE\_CALIBRATION uses as calibrations the media propagation delay in the Earth troposphere and the path propagation delay through the plasma.

#### **ODFRNG-SPEC-2610: Tropospheric calibration**

The path delay (unit is meter) of the dry and wet component of the Earth troposphere is (Hofmann-Wellenhoff et al., Global Positioning System, 4<sup>th</sup> Ed.):

$$\Delta_{dry}(E) = \frac{10^{-6}}{5} \frac{77.64 \frac{p}{T}}{\sin(\sqrt{E^2 + 6.25})} [40136 + 148.72(T - 273.16)] \quad (1.1)$$

$$\Delta_{wet}(E) = \frac{10^{-6}}{5} \frac{-12.96T + 3.718 \cdot 10^5}{\sin(\sqrt{E^2 + 2.25})} \frac{e}{T^2} 11000$$

where  $p$ ,  $T$  and  $e$  are the atmospheric pressure, Temperature and humidity, respectively, as observed at the ground station site. These values are given in the DSN\_MEDIA file. The elevation angle  $E$  (unit in degrees) is provided by PREDICT\_FILE.

The total tropospheric calibration expressed as delay time in seconds is:

$$\tau_{tropo} = \frac{1}{c} \{ \Delta_{dry}(E) + \Delta_{wet}(E) \} \quad (1.2)$$

where  $c$  is the speed of light with definition given in ODFRNG-DEF-1020.

#### **ODFRNG-SPEC-2620: plasma calibration**

Let

$$\delta\tau = \tau_s - \tau_x = \frac{1}{2} \frac{1}{4\pi^2} \frac{e^2}{m_e \epsilon_0} \frac{1}{c} \left\{ \frac{1}{f_s^2} - \frac{1}{f_x^2} \right\} I$$

be the differential range, where  $I$  is the total electron content and  $f_s$  and  $f_x$  are the downlink carrier frequencies as defined in ODFRNG-DEF-2160. Then

$$I = c \left[ \frac{1}{2} \frac{1}{4\pi^2} \frac{e^2}{m_e \epsilon_0} \right]^{-1} \left\{ \frac{1}{f_s^2} - \frac{1}{f_x^2} \right\}^{-1} \delta\tau$$

**ODFRNG-SPEC-2621: plasma correction**

The plasma correction for each frequency band is then

$$\tau_{plasma,S} = \frac{1}{2c} \frac{1}{4\pi^2} \frac{e^2}{m_e \epsilon_0} \frac{1}{f_S^2} I$$

$$\tau_{plasma,X} = \frac{1}{2c} \frac{1}{4\pi^2} \frac{e^2}{m_e \epsilon_0} \frac{1}{f_X^2} I$$

**ODFRNG-SPEC-2625: relativistic group delay calibration**

If no dual frequency measurements using the differential method are performed the ranging data must be corrected for the effects of the theory of General Relativity (GRT). Figure 2.3-1 shows the geometric constellation relevant for our analysis.

Assuming a generalized Schwarzschild metric (where  $\gamma$  is the PPN parameter of General Relativity) the subroutine S\_EINSTEIN calculates the additional two way delay  $\tau_{einstein}$  caused by the gravity field of the sun by the following expression:

$$\tau_{einstein} = \frac{4GM}{c^3} \left[ \frac{1+\gamma}{2} \ln \left( \frac{r_e + r_p + \rho}{r_e + r_p - \rho} \right) \right]$$

$\rho$ ,  $r_e$  and  $r_p$  are the coordinate distances between G/S and planet (satellite), the heliocentric distance of the G/S and the heliocentric distance of the planet (satellite), whereby  $\gamma$  is set to 1.0, because of the fact that  $v_{s/c}$  is neglectible with respect to  $c_{speed\ of\ light}$

**Figure 2.3-1: Radar echo at planet P (S/C)**

**ODFRNG-SPEC-2630: total calibration**

The calibrated RTLT  $\tau_{calibrated}$  is the observed RTLT  $\tau$  minus the transponder delays defined in Table TRANSPONDER\_CAL minus the tropospheric calibration defined in ODFRNG-SPEC-2610 minus the plasma correction defined in ODFRNG-SPEC-2621 minus the relativistic calibration defined in ODFRNG-SPEC-2622:

$$\tau_{calibrated} = \tau - \tau_{transponder} - \tau_{tropo} - \tau_{iono} - \tau_{einstein} \quad (1.3)$$

The DSN equipment path delay and the antenna z-correction are already subtracted from the observed values. The ODF provides corrected values in this regard.

**2.3.3.2 Subroutine RANGE\_RESIDUAL**

RANGE\_RESIDUAL computes for each frequency band the ranging residuals, expressed as propagation time, between the observed TWLT and the predicted TWLT.

**ODFRNG-SPEC-2640:** RANGE\_RESIDUAL accepts predicted RTLT as interpolated from PREDICT\_FILE in MODULE PREDICT from the given array TIME\_RANGE.

**ODFRNG-SPEC-2645:** RANGE\_RESIDUAL computes the range residuals (range delay) at S-band or X-band expressed as residual in the round-trip-light time  $\tau$

$$\Delta \tau = \tau_{calibrated} - \tau_{predicted} \quad (1.4)$$

### 3 OUTPUT FILES

#### 3.1 SUBROUTINE RANGE\_OUTPUT

**ODFRNG-SPEC-2760:** The RANGE\_OUTPUT file name is defined as

**rggODF0L02\_sss\_yydddhmm\_qq.TAB**

*gg* = DSN\_STATION\_ID as selected from the input file ODFRNG-SPEC-2240

*yydddhmm* = start of output data time range as selected from the input data file

**Table 3-1: file name parameter**
