Page: 4 of 11

1. Introduction

This document describes the command sequence and operation of Ptolemy Module U – WGA and CDMS timing test. The module is designed as a standalone module to acquire 150 mass spectra of WGA6 and 150 spectra of WGA7.

Page: 5 of 11

2. WGA and CDMS timing test Module

Module U operates the mass spectrometer to acquire 150 mass spectra of WGA6 (m/z = 35 to 50) and 150 mass spectra of WGA7 (m/z = 20 to 150). The RF is not tuned; tuning will be achieved by either executing a Module R, the Cruise Phase mode or by CDMS writing the RF word to the Ptolemy backup RAM. Module U is not in the current plan for use on the Ptolemy FM; it is being used to test the mass spectrometer sequences on the QM and for timing tests on the GRM.

2.1 Sequence outline

1. Measure temperature of AD590, and the currents and voltages on the 5V and 28V rails
2. Switch on the mass spectrometer and perform an RF calibration.
3. Acquire 150 mass spectra of WGA 6, followed by 150 mass spectra of WGA 7. Switch off the mass spectrometer.
4. Measure temperature of AD590, and the currents and voltages on the 5V and 28V rails.

The detailed Ptolemy sequence is listed in section 4.

2.2 Resources

Start State – All Ptolemy subsystems off
End State – All Ptolemy subsystems off

Subsystems operated:
Mass spec. WGA6, WGA7

Data Volume:

| | |
|---------------------|------|
| Aux Science packets | 1 |
| Spectrum packets | 1200 |
| Number of spectra | 300 |

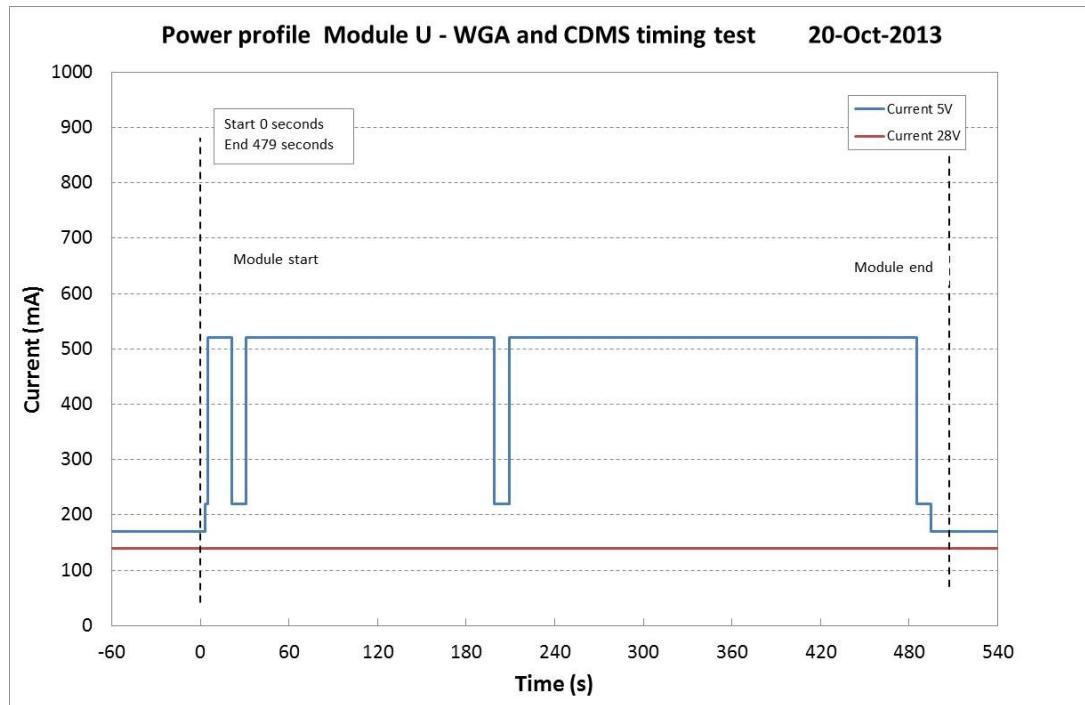

Resources:

| | |
|---------------|------|
| Helium used | none |
| Hydrogen used | none |
| Oxygen used | none |
| Reference gas | none |
| Nano-tip use | none |

| Power profile Nominal: | 5.2V Supply Rail | | 28V supply rail | |
|---------------------------|------------------|-----------|-----------------|-----------|
| | Current (mA) | Power (W) | Current (mA) | Power (W) |
| Average | 490 | 2.55 | 140 | 3.92 |
| Maximum | 520 | 1.81 | 140 | 3.92 |

Duration 508 s
Total energy 3286 J

Calculated power profile

2.3 Ptolemy Models

A summary of the use of Module R- RF tune with the various Ptolemy models is given below.

| Model | Use | Power Profile (c.f. FM) | Timing (c.f. FM) | Sensors |
|-------|----------|----------------------------|---------------------|---------|
| FM | Any time | - | - | - |
| QM | Vacuum | Same | Same | Same |
| CSS | Any time | Different | Same | Same |
| GRM | Any time | Different | Same | Same |

2.3.1 Flight Model (FM)

ModuleU uses the mass spectrometer, but does not use the nano-tips. It can be used at any time on the FM, subject to power limitations.

2.3.2 Qualification Model (QM)

Module U uses the mass spectrometer high voltage supplies. It should only be used when the QM is under vacuum.

2.3.3 Chemistry Set Simulator (CSS)

Module U Scans can be used at any time on the CSS.

2.3.4 Ground Reference Model (GRM)

Module U can be used at any time on the GRM. There are no high voltage supplies on the GRM.

3. Operation of Module U – WGA and CDMS timing test

3.1 Load Ptolemy Memory

In order to operate Module U – WGA and CDMS timing test, the commands have to be loaded onto Ptolemy EEPROM using the Ptolemy Load Memory TC (AD1). The TCs to upload the module only need to be transmitted once for each Ptolemy instrument, unless a check memory TC indicates that the Ptolemy EEPROM has become corrupted.

3.2 Execution of Module U – WGA and CDMS timing test

The sequence to execute Module U – WGA and CDMS timing test in a Standalone mode is as follows:

1. Start with Ptolemy switched on and having transmitted the Ptolemy Initialisation TCs.
2. Check Memory Module U
3. Transmit TC to set Ptolemy into Standby mode
4. Transmit TC to enable the relevant Ptolemy subsystems
5. Transmit TC to define module start address
6. Transmit TC to Module U – WGA and CDMS timing test
7. Once the WGA and CDMS timing test module has been completed then transmit TC to set Ptolemy into Safe mode

TC: Check Memory Module U

**1F3C F111 000D 1006 0900 9701 0005 BE00
002F 4B43**

The results of the Memory check TC are returned as a Check memory report within a Housekeeping packet.

| Memory Address | | Number of Words | Expected Checksum |
|----------------|--------|-----------------|-------------------|
| Page | Offset | | |
| 0005 | BE00 | 002F | 7E32 |

TC: Parameter update – define Module U start address

**1F3C F131 000D 10C3 0100 200E 0002 0005
BE00 19E1**

Updates parameter 0x200E with two words to define the start address as EEPROM page 5 0xBE00

TC: Start Module U – WGA and CDMS timing test
