3. Activity Summary

VIRTIS performed three observation sessions in the period 24/28 February 2007:

1. Session F72O Mars Dayside Observations
2. Session F72P Mars Nightside Observations
3. Session F72S Jupiter Observation

			<p>doc : VIR-IAS-TR-027 issue 1 date: 01/03/2012 page: 5 of 174</p>
---	---	--	--

3.1 Session F720 Mars Dayside Observations

- VR01 Mars Linear Slew Scan

Observation of Mars from limb to terminator; VIRTIS-H minor constituents of the atmosphere, fluorescence emission at limb. VIRTIS-M full surface mapping
- VR10A Ride Along with SR03

Ride Along before CA
- VR02 Mars Linear Slew Scan

Observation of Mars from limb to terminator; VIRTIS-H minor constituents of the atmosphere, fluorescence emission at limb. VIRTIS-M full surface mapping
- VR04 V-M COMMON WITH OSIRIS SR05

Full Mars hyperspectral image from limb to terminator
- VR03 Mars Linear Slew Scan

Observation of Mars from limb to terminator; VIRTIS-H minor constituents of the atmosphere, fluorescence emission at limb. VIRTIS-M full surface mapping

3.2 Session F72P Mars Nightside Observations

- VR05A Terminator Scan

Observation of CO₂ fluorescence in atmosphere and atmospheric species abundance measurement (VIRTIS-H and M)+ Measurement of surface thermal emission + minor atmospheric volatiles
- VR11A AL14 Ridealong

Ride Along before CA

			<p>doc : VIR-IAS-TR-027 issue 1 date: 01/03/2012 page: 6 of 174</p>
---	---	--	--

- VR05B Terminator Scan
Observation of CO₂ fluorescence in atmosphere and atmospheric species abundance measurement (VIRTIS-H and M)+ Measurement of surface thermal emission + minor atmospheric volatiles
- VR06 V-M Mars Thermal Imaging
Surface thermal emission gradient
- VR07 V-M Full Mars Scan
Full Mars Night side

3.3 Session F72S Jupiter Observation

- VR08 Jupiter Scan
Full Jupiter spectrum

4. Activity Description and Cubes Generated

4.1 Session F72O Mars Dayside Observations

- VR01 Mars Linear Slew Scan
S/C Scan across Martian disk. Both VIRTIS-H and VIRTIS-M took advantage of the S/C scan to build up the image

4.3 Session F72S Jupiter Observation

- VR08 Jupiter Scan

A limited scan by the S/C shall be required with the target at the VIRTIS-H boresight. The VIRTIS-M slit shall be positioned at the VIRTIS-H boresight (by means of the scan mirror). Both channels will use the S/C motion to acquire the spectrum

5. Mars Swing-By losing of M and H Data Slices description

During the MSB pre and post CA observations, VIRTIS generated the following events, related to losing of M and H data slices:

Starting on DOY055 at 18:13, VIRTIS started generating event M_VIS_Data_Slice_Lost (EvID 47738), until 19:01. Immediately after, at 19:02 event H_Data_Slice_Lost (EvID 47928) was also generated, followed by more occurrences of event M_VIS_Data_Slice_Lost.

Before the Closest Approach, VIRTIS, OSIRIS and the NAVCAM were using the high speed link for storing data in the SSMM. Nevertheless, after the MSB, only OSIRIS and VIRTIS were using the link, but still both M and H data slices were lost.

6. Mars Swing-By M and H Data Lost Slices List

7. VIRTIS Data Slices Lost Analysis and Solution

The Virtis observation VR02 performed during PC10 was designed to verify the correct functioning of the updated SW

.To achieve this goal some of the sequences which generated slice lost events during previous observations (MSB and ESB01) were repeated during VR02.

We selected the sequences MSB-VR05A (Terminator Scan), MSB-VR010A (Ride Along with SR03) and ESB01-VR02.

The result was that no slice was lost.

The Virtis-H Data Slice Lost events occurred during ESB3 were due to the concomitant heavy use of resources of both Virtis-M and Virtis-H.

After an analysis of the occurrences of Data Slice Lost event, Gisbert Peter(*) came to this conclusion:

- when Virtis–H operates alone H_IRT shall be larger than 0,7sec with an uncertainty of about +50msec (due to the unknown S/C I/F performance), the Virtis–H slice lost event should not occur
- when Virtis–H and Virtis–M operate together (Virtis-M in full window mode) H_IRT shall be larger than 1,4sec with an uncertainty of about +100msec (due to the unknown S/C I/F performance), the Virtis–H slice lost events should not occur
- During ESB3-VR08 the repetition time for Virtis-H was 0,955 which was not compliant with the limit settled when Virtis–H and Virtis–M operate together
- The repetition time is calculated as: $H_IRT = (H_INT + 284,58ms + 2,304ms + 79,872ms) * H_N_FRAME$
- The H Slice lost occurs when both a H_Spectra_Slice and a H_Dark is transferred to the S/C (shortly to each other). That means the event frequency depends also on the H_Dark_Rate but in connection to H_IRT and H_Spectra_Slice (64 x Spectra) composition.

(*) The person in charge for the digital electronics

			<p>doc : VIR-IAS-TR-027 issue 1 date: 01/03/2012 page: 24 of 174</p>
---	---	--	---

This is a summary to avoid H slice/spectra lost:

- Operation Virtis-H + Virtis-M: H_IRT > 1,5 sec (there is an interference of Virtis-M operation on Virtis-H but no interference of Virtis-H operation on Virtis-M)
- Operation Virtis-H only: H_IRT > 0,75 sec

This will not be a problem in the future since during Lutetia observations and comet observation phase H_IRT will be much higher than the minimum needed to avoid Data Slice Lost events.
