## Procedure Summary

### Objectives

This procedure describes the TTC commissioning sequence of activities.

There is a Prime and Redundant TTC subsystem, and the basic Commissioning sequence is:

- TTC1 Health Check
- TTC1 Receiver Thresholds Check
- TTC1 Transmitter + Telemetry + Ranging Functional check
- TTC1 Telemetry Rates Functional Check
- TTC2 Health Check
- TTC2 Receiver Thresholds Check
- TTC2 Telemetry Rates Functional Check
- MGA Characterisation

### Summary of Constraints

This procedure is basically addressing the list of activities in TTC commissioning providing a mapping between COP activities IDs and FOP procedures IDs.

The order in the steps execution of this procedure is not containing the TTC COP activities, being their execution possibly reschedule according to the need.

Constrain on the different activities are reported in the dedicated procedures

### Spacecraft Configuration

#### Start of Procedure

CDMU in default configuration;  
RX1 TC rate 4 kbps  
RX2 TC rate 125 bps  
TX1 ON and TX2 OFF, TM rate 150kbps  
RFDN configuration: BBAB (LGA-1 on TX1&RX1 / MGA on TX2&RX2)

#### End of Procedure

CDMU in default configuration;  
RX1 TC rate 4 kbps  
RX2 TC rate 125 bps  
TX1 ON and TX2 OFF, TM rate 150kbps  
RFDN configuration: ABAB (MGA on TX1&RX1 / LGA-1 on TX2&RX2)
