

Perform a standard patch
 File: H_CRP_DHS_3035.xls
 Author: S. Manganelli

Procedure Summary

Objectives

This procedure describes the steps needed to perform a "Standard Patch" on EEPROM (code plus data).
 The procedure foresees to start the new uploaded SW image through a forced SW alarm (level 3 failure). At the end, the relevant attempt counter will be reset to have still two attempts, for level 3 alarms, available.

Summary of Constraints

A "Standard patch" is requested whenever the CDMU OBSW has to be changed, either ASW or BSW, without impacting the definitions of the data structures stored in SGM. This means that the SW can reboot using the critical data stored in SGM.

		If PM A/B bit 1 relay = 1 the image selected is "Image 1" while if it is equal to 0 the image selected is "Image 2".		
		Verify Telemetry PMA_R1_TTR-RM_A DEEX2160		AND=ZAZAA999
		Verify Telemetry PMB_R1_TTR-RM_B DEEX4160		AND=ZAZAA999
6		Is the following condition true? RM programming set (in use)=PM A only OR PM B only AND PM (active) bit 1 relay=Image 1		Next Step: 7
7		IF		Next Step: YES 8 NO 9
<p>TC Seq. Name :HRD3035B (Disable both RMs)</p> <p>TimeTag Type: Sub Schedule ID: <input type="checkbox"/></p>				
8		Call procedure to disable both RMs		Next Step: 9
		This step will prevent the possibility to select automatically the SW Image 2 and run it while patching.		
		WARNING: the called procedure must be executed 4 times; in fact it is necessary to disable both RMs sending the TC(2,3) ("Standard") via CPDU A and B. In the called procedure, at the step 3 choose "disable" and then at the step 10 choose the RM.		
		Use procedure H_CRP_DHS_3011.		
<p>TC Seq. Name :HRD3035C (Load SW patch)</p> <p>TimeTag Type: Sub Schedule ID: <input type="checkbox"/></p>				
9		Call procedure to load the SW patch in the SW image not in use and to verify the loaded data		Next Step: 10
		In the called procedure, at the step 3, choose the "EEPROM" branch.
