

Roll back to TTR B after TTR switchover  
File: H\_CRP\_DHS\_3055.xls  
Author: S. Manganelli

## Procedure Summary

### Objectives

This procedure describes the steps needed to switch to TM encoder/OBT B after a TTR switchover performed on-board following BSW events 56/57/64/65/86/87.

### Summary of Constraints

After the TTR roll back Ground has to verify the status of the following entries in Unit In Use (UIU) table, related to TTR components managed by the BSW via the Health Table:

- failure on ICB:
  - > SGM, CPDU and Survival Register
- failure on SPW:
  - > SGM

Failed Survival Register and CPDU entries could be set back to "Not failed" by Ground. It is clear that in case of permanent failure of related BSW component these items cannot be operated anymore and they would set again to "Failed" by ASW.

In order to resume the operations on both the SGMs it is necessary to have both of them as "Not failed" in UIU and align their content as necessary for both BSW and ASW data. Also in this case the operations on SGM are strictly depending on BSW related components (i.e. SPW, ICB have to work correctly).

Moreover, when changing the TM encoder a glitch on the internal PPS lines of the OBT cannot be excluded, possibly causing the BSW to enter in free running mode; for this reason it is necessary to set the CTR (Centr

### Spacecraft Configuration

#### Start of Procedure

TM Encoder/OBT A active;  
TM Encoder/OBT B not active and marked as "Failed" in UIU.

#### End of Procedure

TM Encoder/OBT B active and marked as "Not failed" in UIU table;  
TM Encoder/OBT A not active.

### Procedure Flowchart Overview

Roll back to TTR B after TTR switchover  
 File: H\_CRP\_DHS\_3055.xls  
 Author: S. Manganelli

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
<b>Beginning of Procedure</b>				
TC Seq. Name :HRD3055 (Verify functions)  TimeTag Type: N Sub Schedule ID:  <input type="checkbox"/>				
1		Verify that the Event/Action Management and the FDIR Management functions are running		Next Step: 2
		Verify Telemetry  <b>EaSts</b> <b>DEG19170</b>	<b>= Running</b>	AND=ZAZAI999
		Verify Telemetry  <b>FdirSts</b> <b>DEG23170</b>	<b>= Running</b>	AND=ZAZAI999
2		Disable D/L?		Next Step: Yes 3 No 6
		Disabling downlink would avoid possible ground reception of incomplete frames / packets <b>but then the procedure must be run in the blind.</b>		
TC Seq. Name :HRD3055A (Disable D/L all)  TimeTag Type: N Sub Schedule ID:  <input type="checkbox"/>				
3		Send TC(14,6) to acquire the list of TM packets downlinked		Next Step: 4
		<b>When CDMU receives this request, the real time down-linking and SSMM storage status are determined for all telemetry packet (Application ID, Type, Sub-Type) and a report (14,7) is generated.</b>		
		Execute Telecommand  <b>RepDownlinkTMStorage</b>  TC Control Flags :  <b>GBM IL DSE</b> <b>--Y -- --</b>  Subsch. ID : 10 Det. descr. : Report Telemetry Packets Down-linking/ Storage Status	<b>DC141160</b>	
4		Verify that TM(14,7) has been received		Next Step: 5

Roll back to TTR B after TTR switchover  
 File: H\_CRP\_DHS\_3055.xls  
 Author: S. Manganelli

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		<p><b>Keep Storage flag:</b> repeated N times, is the "mask" of the Storage flag            0 = Update the Storage flag            1 = Keep current Storage flag value</p> <p><b>Storage flag:</b> repeated N times, can take two values and indicate if SSMM storage is to be enabled or disabled.            0 = Disabled            1 = Enabled            The parameter is ignored if its mask is set.</p>		
		<p>The {Application ID, Type, Sub-Type} set identifies the TM packets to which the Real Time downlinking and/or SSMM storage control shall be applied as follows :</p> <p>If Application ID &gt; 0, Real Time down-linking and/or SSMM storage of all TM packets carrying the selected Application ID shall be Enabled/Disabled according to the Transmit flag and Storage flag values.</p> <p>If Application ID = 0 and Type &gt; 0 (then Sub-Type shall be &gt; 0), Real Time downlinking and/or SSMM storage of all TM packets carrying the selected {Type, Sub-Type} shall be Enabled/Disabled according to the Transmit flag and Storage flag values.</p> <p>If Application ID = 0 and Type = 0, Real Time down-linking and/or SSMM storage of all TM packets shall be Enabled/Disabled according to Transmit flag and Storage flag values.</p> <p>A packet definition with both APID and Type set to 0 have to be the first definition in the TC.</p> <p>In a packet definition, either both Type and Sub-type shall be 0, or none of them shall be 0.</p>		
		<p>In this case the set needs to be the following:</p> <p>N = 1            Application ID = 0            Type = 0            Sub-Type=0            Keep Transmit flag = 0            Transmit flag = 0            Keep Storage flag = 1            Storage flag = 1</p>
