

FDIR 3&4 Anomaly Checkout
File: H_CRP_SYS_CHECK.xls
Author: F. Keck

Procedure Summary

Objectives

Investigations following the detection of a non-nominal CDMU/ACMS Mode, indicating a level 3 or 4 FDIR.
This procedure shall be run by the On-Call FCT person together with the SPACON on shift.
The results are the baseline for the detailed analysis of the anomaly by the FCT (and defining the recovery strategy) following the DTCP.

Summary of Constraints

If the mode drop caused a drop in TM rate to 500bps, this procedure follows the "No TM Recovery" (to be precise: H_CRP_SYS_NOTM calls H_CRP_SYS_ANOM which calls this procedure as one of the first steps).

Spacecraft Configuration

Start of Procedure

CDMU or ACC reboot detected (AIR, CIR or SIR)
Routine Ops: CDMU/ACMS Mode not NOM/SCM

End of Procedure

If possible (and required) the TM/TC rate was increased.
Dumps were performed to help analysing the problem and planning a recovery.

Procedure Flowchart Overview

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
Beginning of Procedure				
<p><i>TC Seq. Name : HRYCHECK (FDIR 34 Checkout)</i></p> <p><i>TimeTag Type: B</i> <i>Sub Schedule ID:</i></p> <p style="text-align: center;">□</p>				
1		Reminder		Next Step: 2
		<p>Should you have started with this procedure without H_CRP_SYS_ANOM first:</p> <p>Do not forget to inform all parties as described in H_CRP_SYS_ANOM. E.g. contact SOM...</p>		
2		ACMS = SAM/SM ?		Next Step: False 6 True 3
		<p>Check if ACMS is in a Sun Acquisition Mode.</p> <p>There are 2 sun acqutistion modes: - SAM: Sun Acquisition Mode - SASM: Sun Acquisition Survival Mode</p> <p>Comment: SM (Survival Mode) is usually used as the short form of SASM.</p>		
		<p>Verify Telemetry</p> <p style="text-align: center;">ACMS mode XD009990</p> <p style="text-align: center;">= SAM = SASM</p>		MIMIC:OVER_H
3		Check stable Sun Acquisition		Next Step: ACMS 4 EPS 5
		<p>The confirmation of a stable sun pointing and good power situation has top priority before detailed subsystem reports.</p> <p>LEOP: All activities in these steps shall be immediatly performed in parallel by the ACMS and EPS SOE.</p>		
4		ACMS		Next Step: 6
		Confirm sun pointing attitude.		
		<p>Verify Telemetry</p> <p style="text-align: center;">Sunvector X BRF AEUVX001</p> <p style="text-align: center;">approx. 0</p>		AND=ZAA00999
		<p>Verify Telemetry</p> <p style="text-align: center;">Sunvector Y BRF AEUVY001</p> <p style="text-align: center;">approx. 0</p>		AND=ZAA00999

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Verify Telemetry Sunvector Z BRF AEUVZ001	approx. 1	AND=ZAA00999
		Verify Telemetry Est ang rate X AESR7001	~0 rd/s	AND=ZAA00999
		Verify Telemetry Est ang rate Y AESR8001	~0 rd/s	AND=ZAA00999
		Verify Telemetry Est ang rate Z AESR9001	~0 rd/s	AND=ZAA00999
		Detailed SAS1 Checkout: The following SAS1 currents should show similar values in sun pointing.		
		Verify Telemetry SAS1 +X nom AMUC1044		AND=ZAA00999
		Verify Telemetry SAS1 +Y nom AMUC2044		AND=ZAA00999
		Verify Telemetry SAS1 -X nom AMUC5044		AND=ZAA00999
		Verify Telemetry SAS1 -Y nom AMUC6044		AND=ZAA00999
		Verify Telemetry SAS1 +X red AMUC9044		AND=ZAA00999
		Verify Telemetry SAS1 +Y red AMUCA044		AND=ZAA00999
		Verify Telemetry SAS1 -X red AMUCD044		AND=ZAA00999
		Verify Telemetry SAS1 -Y red AMUCE044		AND=ZAA00999
		In case of SASM (ACMS Survival Mode): Quick check LV-A status (e.g. on Overview MIMIC). - Open indicates an FDIR 3b - Closed indicates an FDIR 4		
5		EPS		Next Step: 6
		Confirm solar array current and no discharge of batteries.		
		Verify Telemetry TM_IOUT_BDR1 WMT08565	= 0.0 A	MIMIC:EPS_H
		Verify Telemetry TM_IOUT_BDR2 WMT09565	= 0.0 A	MIMIC:EPS_H
		Verify Telemetry TM_ISA_S3R_1 WMT14565		MIMIC:EPS_H

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Verify Telemetry TM_ISA_S3R_2 WMT15565		MIMIC:EPS_H
		Verify Telemetry TM_ISA_S3R_3 WMT16565		MIMIC:EPS_H
6		<i>Quick Checkout</i>		Next Step: 7
		Use table in attachement to do a quick checkout for the kind of FDIR, which has triggered.		
7		<i>Configure TM and TC</i>		Next Step: 8
		Execute Procedure: H_CRP_SYS_TMTC Configure TM/TC after Mode Drop		
8		<i>DoD only: Overwrite Default Values if necessary</i>		Next Step: 9
		In case of a DoD the default tables from EEPROM are used. Should these default values not fit to the current situation they must be corrected. E.g. in LEOP: Restoring of ground FCCT values if necessary No procedure references can be provided here, because such a situation must never occur in routine phase, and during LEOP all experts are available to handle such a situation.		
9		<i>LEOP only: CCU Monitoring</i>		Next Step: 10
		In H_FCP_CCU_ACQP select Sequence HFKACQP2 (CCU ACQ Recyc/Decont) to set CCU A/B Recycling/Decontamination monitoring (period 8s all sensors)		
		Execute Procedure: H_FCP_CCU_ACQP CCU acquisition period update		
		Execute Procedure: H_LEO_CCU_MON1 Disable CCUA/B monit #1 (512s) packets		

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
10		Option: Resync OBT and ACMS		Next Step: 11
		Should the OBT have not re-synced with the CTR, do it here: 1) Resync CTR 2) Resync ACC with CDMU		
		Execute Procedure: H_FCP_DHS_3021 Set central time reference synchronization		
		The instruments resync their times automatically.		
11		Dumps for Investigations		Next Step: 12
		The following dumps are required to get all necessary TM for analysing the situation and planning the recovery. Some dumps can be skipped if the situation is clear (e.g. ACC dumps after an obvious CDMU 3a). If in doubt just dump everything, it does not harm.		
11.1		Dump CELs and get CDMU Boot Report		<input type="checkbox"/>
		This CEL dump can be skipped (but not the search for CDMU boot reports) in case of EAM/SCM, but only if the SPACON runs the DTCP stack (CEL dumps are part of the DTCP stack).		
		The following sequence is maintained by procedure: H_FCP_DHS_3014 Dump and interpretation of CEL		
		The sequence requests a time for the deletion of the CELs. Just enter the current time.		
		Execute Sequence HFD3014 Dump of CEL v06 Sequence Grouping = - Sequence Parameter(s) Abs_Time = Current Time This Sequence Reference is not included in the generated sequence SSID : 0		SEQ
		Check CELs for the event time of boot reports: CDMU boot reports indicate a CIR or SIR		

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch										
		Verify Packet Reception CdmuBsw Event 5-4 Boot Report and Reconfiguration Log Packet Details: <table style="margin-left: 200px;"> <tr><td>APID:</td><td>16</td></tr> <tr><td>Type:</td><td>5</td></tr> <tr><td>Subtype:</td><td>4</td></tr> <tr><td>PI1:</td><td>134</td></tr> <tr><td>PI2:</td><td>134</td></tr> </table>	APID:	16	Type:	5	Subtype:	4	PI1:	134	PI2:	134	D_EvRp_534	
APID:	16													
Type:	5													
Subtype:	4													
PI1:	134													
PI2:	134													
		A description how to analyse the boot report using openOffice is attached. Don't waste valuable pass time now and proceed with the dumps! Do the analysis in parallel or later.												
11.2		Get ACC Boot Report		☐										
		The ACC boot report would indicate an AIR, but unfortunately this report is a (5,1) packet, which is only stored in the SEL, not in the CEL. A full dump of the SEL is not possible after an AIR (leading to SAM) in Routine Ops, because the maximum TM rate via the LGA is 5k only. Therefore a workaround must be done using Diagnostics.												
		The following sequences are maintained by procedure: H_CRP_AOC_2BRT Get ACC Boot Report												
		Execute following sequences:												
		Execute Sequence HRA2BRTA GetAccBootReport v02 Sequence Grouping = - This Sequence Reference is not included in the generated sequence SSID : 0		SEQ										
		Verify Packet Reception ACC Boot Report Packet Details: <table style="margin-left: 200px;"> <tr><td>APID:</td><td>514</td></tr> <tr><td>Type:</td><td>3</td></tr> <tr><td>Subtype:</td><td>26</td></tr> <tr><td>PI1:</td><td>30053</td></tr> <tr><td>PI2:</td><td></td></tr> </table>	APID:	514	Type:	3	Subtype:	26	PI1:	30053	PI2:		ACCBotRep	
APID:	514													
Type:	3													
Subtype:	26													
PI1:	30053													
PI2:														
		Execute Sequence HRA2BRTB DiasbleAccBootReport v02 Sequence Grouping = - This Sequence Reference is not included in the generated sequence SSID : 0		SEQ										

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Execute Sequence HRA2BRTC ClearAccBootReport v02 Sequence Grouping = - This Sequence Reference is not included in the generated sequence SSID : 0		SEQ
		NOTE: The ACC boot time in this Diagnostic is based on the RM Log; so the leading byte for a complete OBT is missing and the boot time cannot directly be specified.		
		Workaround to find ACC boot time: The following TM parameter shows the time in seconds since the ACC BSW has started. Subtract the seconds from the current time and use it later for the partial SEL dump.		
		Verify Telemetry BSW_ObtElapsdIn XM656991		MIMIC:ACC_H
11.3		Dump SEL		<input type="checkbox"/>
		This step can be skipped in case of EAM/SCM, but only if the SPACON runs the DTCP stack (which includes the full SEL dump). Comment: SEL = S/C Event Log = Packet Store 1 (129)		
11.3.1		Option: Specify Start and Stop Times		<input type="checkbox"/>
		A full dump of the SEL is only possible if the TM rate is medium or high (150k or 1.5M). In this case do not set the start/stop times and proceed with the SEL dump.		
		If the TM rate is low1 or low2 (500 or 5k) prepare a partial SEL dump: Take the event time of boot report(s) from the CEL. Dump the SEL (packet store 1 or 129) in the time range of +/- 5 minutes around the boot times. Comment: Even on 5k TM rate, this partial dump should take not more than 5 minutes.		
		The following commands are derived from procedure: H_FCP_DHS_3015 Dump and interpretation of SEL		
		Execute following TC to prepare an SEL dump between two times (this command will not start the dump):		

FDIR 3&4 Anomaly Checkout
 File: H_CRP_SYS_CHECK.xls
 Author: F. Keck

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Execute Telecommand <p style="text-align: right;">DownlinkTimeP_Between</p> Command Parameter(s) : Store_Id DH003160 Storage_Time DH062160 Storage_Time DH062160 TC Control Flags : <p style="text-align: right;">GBM IL DSE --Y -- ---</p> Subsch. EAM/SAM	NOM/SAM	CTR Level 3a/b	Sun pointing, TTC 150k/4k via MGA	If MGA attitude constraints are not met in sun pointing: Loss of TM !!
	NOM/OCM	CTR Level 3a or 3b (and < 3 RWLs)		
SAM/SAM	SAM/SAM	CTR Level 3a or 3b	Sun pointing, TTC 500/125 via LGA	Adjust Ground Station to 500/125
	Any (not SMs)	AIR Level 3a		
SM/SAM	Any (not SAM/SM)	SIR Level 4		
SAM/SM	Any (not SM/SAM)	AIR Level 3b or 4		
SM/SM	SAM/SM	SIR Level 4		
	SM/SAM	AIR Level 3b or 4		

Level 3a or 3b ?

- PM-A still in use -> Level 3a
- PM-B in use -> Level 3b

ACMS mode = SM. Level 3b or 4 ?

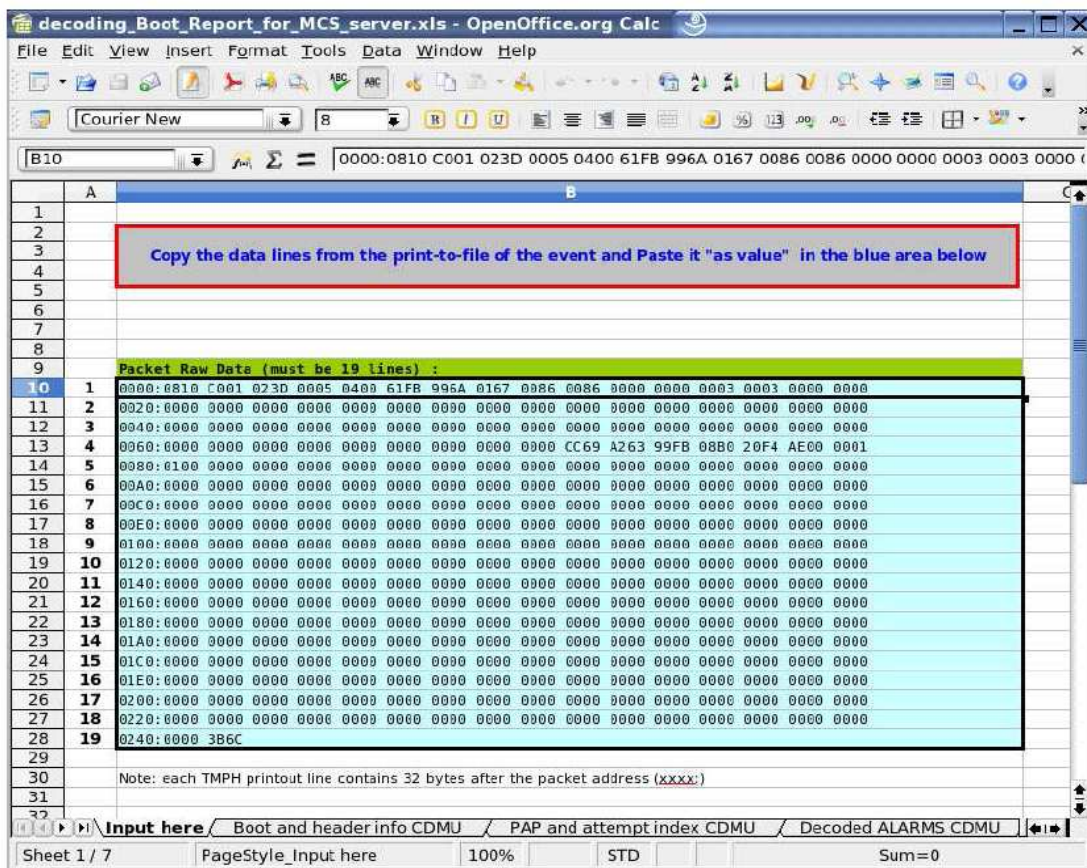

- LV-A open -> Level 3b (PM problem)
- LV-A closed -> Level 4 (bigger problem, e.g. RCS)

Boot Report Analysis with openOffice

- 1) Open a terminal
- 2) > start_openoffice
- 3) openOffice: Select File – Open
- 4) openOffice: Check for directory “/home/hmcsops/Documents/”
- 5) openOffice: Load file named “decoding_Boot_Report...” (or similar)
- 6) openOffice: Select the sheet/tab “Input here”
- 7) TMPH: Double click on boot report packet to open TM Packet Query Display
- 8) TMPH: Mark with pressed left mouse button the raw data under “Packet Raw Data” (see screenshot on next page)
- 9) openOffice: Select (left click) first row of the input field
- 10) openOffice: Press middle button to insert the marked raw data into the sheet
 - a. Pop-up-window “Text Input” appears; just click OK

- 11) Double check that the correct raw data was copied over (i.e. compare the TM Packet Query Display with the openOffice “input field”)
- 12) openOffice: Save the file under a new name
- 13) openOffice: Click through the other tabs of the sheet to analyse the boot report
