Memory dump for STR main File: H_FCP_AOC_4S51.xls

Author: dsalt-hp

Procedure Summary

Objectives

The objective of this Herschel ACMS procedure is to dump any area of STR memory (both RAM and EEPROM).

The procedure involves the following activities:

- verify STRmain mode is not INI
- command STRmain memory dump
- collect TM(6,6) dump packets

The ACMS ASW provides a dedicated function for executing ${\tt STR}$ memory dumps. This function manages both the collection of data from the STR and the transmission to the ground through standard service 6 memory dump packets.

No dedicated diagnostic packets are required.

Summary of Constraints

- the dump.
- 2. STR not in INI mode
- 3. The maximum duration of the dump is $42\ \text{minutes}$

			1	Nout Chan:
1		Verify that STR mode is not INI		Next Step: 2
		In ACMS mode which the STR data are used for attitude determination, the STR cannot be in INI mode without		
		triggering FDIR. The procedure can, however be		
		executed also in SAM, in which there is no constraint on the STR mode so that explicit check is necessary		
		to make sure that the download commands will not be rejecteded by the STR.		
		rejecteded by the SIR.
