Procedure Summary

Objectives

The objective of this Herschel ACMS procedure is to lists all activities necessary to assess the health and status of the RCS.

The procedure involves the following activities:

- verify LCL status
- check consistency of LV status
- verify external temperatures of RCS-A or RCS-B
- determine RCS active and redundant branch
- verify catbed temps. of active and redundant RCS branch
- verify tank data and common temperature nodes

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
Beginning of Procedure				
PROC Procedure Properties				
SSID :				
1		Verify LCL status		Next Step: 2
		<p>***** NOTE *****</p> <p>All of the RCS related temperatures/ranges need to be stated in <u>all the relevant steps</u> of this procedure!</p>		
		<p>***** ALERT *****</p> <p>In the pre-separation state, <u>all</u> of the following LCLs will be OFF</p>		
		Verify Telemetry CBH_N_L17_S WMA2H565	= ON	AND=WALC1584
		Verify Telemetry CBH_R_L18_S WM12H565	= OFF	AND=WALC1584
		LCL_17 and LCL_18 power the two sets of catalytic bed heaters which raise the temperature of the catalyst above the minimum safety level. These heaters cannot be controlled by the ACC, and the power is provided directly from the LCL. In the default configuration, only the nominal set of survival heaters should be powered.		
		Verify Telemetry RcsThrsA_L45_1S WM22D565	= ON	AND=WALC2584
		Verify Telemetry RcsThrsA_L45_2S WM22J565	= ON	AND=WALC2584
		Verify Telemetry RcsThrsB_L46_1S WM92D565	= ON	AND=WALC2584
		Verify Telemetry RcsThrsB_L46_2S WM92J565	= ON	AND=WALC2584
		Verify Telemetry RcsLvA_L47_1S WM12E565	= ON	AND=WALC2584
		Verify Telemetry AccLvA_L47_2S WM12J565	= ON	AND=WALC2584
		Verify Telemetry AccLvB_L48_1S WMA2E565	= ON	AND=WALC2584
		Verify Telemetry AccLvB_L48_2S WMA2J565	= ON	AND=WALC2584

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
2		Check ACMS status and RCS configuration		Next Step: 3
2.1		Acquire ACMS execution mode (nominal / survival)		<input type="checkbox"/>
		Verify Telemetry SpacecraftMode AESME002	= Nominal = Survival	AND=ZAA01999
2.2		Acquire RCS selection for nominal and survival modes		<input type="checkbox"/>
		Verify Telemetry Nom Conf RCS AESCF002	= RCS-A = RCS-B	AND=ZAA01999
		Verify Telemetry Surv Conf RCS AESCM001	= RCS-A = RCS-B	AND=ZAA01999
3		Check consistency of LV status		Next Step: 4
3.1		Determine expected status of LVA and LVB		<input type="checkbox"/>
		<p>The determination of the expected status of the latch is based on relatively simple logic which, however, is impossible to code in MOIS because it requires programming constructs (if/else, nested if's) which MOIS does not provide.</p> <p>For this reason, it is given here as pseudo code that the operator will have to follow to determine the expected status of the latch valves "manually".</p> <pre> IF (RcsNom == RCSA AND RcsSurv == RCSA) THEN LVA = Open LVB = Closed ELSE IF (RcsNom == RCSB AND RcsSurv == RCSB) THEN LVA = Closed LVB = Open ELSE IF (AcmsExecMode == Nominal) THEN IF (RcsNom == RCSA) THEN LVA = Open LVB = Closed ELSE </pre>		

RCS Health Check

 Author: dsalt-hp

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		<p>Verification is carried out only for the RCS branch which is either in active use (branch selected for the current ACNS mode) or must be ready for use (this applies to the branch selected for use in Survival Mode). The check in principle could be extended also for the branch that has been excluded from further use during the mission, however, operational restrictions on the allowed ranges of parameters would not apply to this branch and limits for the verification of parameters would be difficult to specify.</p> <p>In general, no specific values or ranges have been indicated as verification criteria in the procedure, since the values depend strongly on the environment in which the procedure is executed. In particular, there is a large difference between temperature ranges expected when the procedure is executed during operations in flight and in a test environment on ground.</p>		
5		Verify external RCS-A temperatures		Next Step: 7
		Verify Telemetry ThermAvgTemp022 DEA8D170		AND=ZAZ86999
		Verify Telemetry ThermAvgTemp042 DEAA1170		AND=ZAZ88999
		Verify Telemetry ThermAvgTemp041 DEAA0170		AND=ZAZ88999
		Verify Telemetry ThermAvgTemp023 DEA8E170		AND=ZAZ86999
		Verify Telemetry ThermAvgTemp044 DEAA3170		AND=ZAZ88999
		Verify Telemetry ThermAvgTemp051 DEAAA170		AND=ZAZ89999
		<p>The temperatures used in the verification criteria above are those the CDMU ASW derives by averaging data from three individual thermistors mounted on the same thermal node.</p> <p>The positions of the nodes are as follows: #22 - FCV A1A #42 - FCV A2A #41 - FCV C1A #23 - FCV C2A #44 - FCV C3A #51 - FCV C4A</p>		
6		Verify external RCS-B temperatures		Next Step: 7

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Verify Telemetry ThermAvgTemp003 DEA7A170		AND=ZAZ84999
		Verify Telemetry ThermAvgTemp009 DEA80170		AND=ZAZ84999
		Verify Telemetry ThermAvgTemp008 DEA7F170		AND=ZAZ84999
		Verify Telemetry ThermAvgTemp004 DEA7B170		AND=ZAZ84999
		Verify Telemetry ThermAvgTemp028 DEA93170		AND=ZAZ87999
		Verify Telemetry ThermAvgTemp010 DEA81170		AND=ZAZ84999
		<i>The temperatures used in the verification criteria above are those the CDMU ASW derives by averaging data from three individual thermistors mounted on the same thermal node. The positions of the nodes are as follows: #03 - FCV A1B #09 - FCV A2B #08 - FCV C1B #04 - FCV C2B #28 - FCV C3B #10 - FCV C4B</i>		
7		<i>Determine active and redundant RCS branch</i>		Next Step: 8
		<i>The ACMS ASW manages the thruster data separately for the branch designated as "active" and "unused". This distinction is also reflected in housekeeping TM and is therefore necessary also in any procedure that uses data assigned to the active and unused branch. The checks for the unused branch may be skipped altogether if that branch is totally eliminated from use; i.e., in the case in which the active branch is selected for both nominal and survival modes.</i>		
		<i>The assignement of the "active" and "unused" branch can be derived from the following logic.</i> <pre> IF (AcmsExecMode == Nominal AND RcsNom == RCSA OR AcmsExecMode == Survival AND RcsSurv == RCSA) ActiveRcs = RCSA UnusedRCS = RCSB ELSE ActiveRcs = RCSB UnusedRcs = RCSA END IF </pre>
