

GYR health check
File: H_FCP_AOC_5013.xls
Author: dsalt-hp

Procedure Summary

Objectives

The objective of this Herschel ACMS procedure is to lists all activities necessary to assess the health and status of the GYR.

The procedure involves the following activities:

- check GYR-E health and status
- check each GYR health
- check resonator temperatures
- check GYR status

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Note: The saturation status is not necessarily an unhealthy condition. It simply indicates that the Heater is working and the channel is warming up. Usually 2 out 4 channels have DiodHeat sat & Heater Sat set to 'Saturated' while for the 2 other channels these are set to 'Not Saturated'. Two out of 4 heaters are nominally sufficient to keep the channels at a constant temperature of about 65°C. The anomaly is if the temperature is above 65°C and the DiodHeat sat & Heater Sat of the sensors are set to 'Saturated'.
