File: H_FCP_AOC_8CCM.xls
Author: dsalt-hp

Procedure Summary

Objectives

The objective of this Herschel ACMS procedure is to dump the CCD image from STRM.

The procedure involves the following activities:

- disable STRM reconfiguration
- declare STRM unhealthy
- command STRM to STB
- upload DTM (SA10D1 & SA14D)
- command entire CCD dump from selected STR, as necessary
- command dump of multiple CCD blocks from selected STR, as necessary
- command dump of a single CCD block from selected STR, as necessary
- collect dump packets
- remove DTM (SA10D1 & SA14D)
- command STRM AAD
- declare STRM healthy
- enable STRM reconfiguration

The ACMS has not been designed to allow ASW-controlled CCD dumping, thus the procedure lists all the necessary steps.

Summary of Constraints

1. procedure to be executed only under Ground contact
2. safety TCs to command STRM to AAD to be uplinked to MTL

Spacecraft Configuration

Start of Procedure

Spacecraft initial conditions:
- STRM in control loop in AAD mode

End of Procedure

Spacecraft final conditions:
- STR CCD image dumped
- STRM back in control loop in AAD mode

Configuration Control Information

DATE	FOP ISSUE	VERSION	MODIFICATION DESCRIPTION	AUTHOR	SPR REF
28/09/2009	2.5	1	Created	dsalt-hp	
10/11/2009		2	Additional steps/sequence (HFA8CCMY) created to dump multiple blocks from CCD corner & center	dsalt-hp	
12/11/2009		3	TCs in Step 15 (Sequence HFA8CCMY) updated to include timetags on uplink time (35s + 1s per arm/fire pair).	dsalt-hp	
12/11/2009		4	Planning flag for sequence HFA8CCMY set to 'All Sources'	dsalt-hp	
16/11/2009		5	Release time of initial TC of Sequence HFA8CCMY removed and manual dispatch flag on subsequent TCs also removed. □ Step 22 added to remove safety TCs from the MTL after nominal execution of procedure	dsalt-hp	
17/11/2009		6	Comments to disable/enable "9 Star" DTM packet now added in Step 8 & 17, to prevent TM overload of CDMU 1553 bus and subsequent loss of TM packets during the dump.	dsalt-hp	
24/11/2009	3	7	TC parameter for STRConf 1553 TR (AHFX6001) corrected and now set to zero (i.e. Receive) in Step 12 & 15 □ [Cf. anomaly report H_SC-50]	dsalt-hp	
26/10/2010		8	Comments in Step 8 & 17 updated to reflect the use of DTM_7 packet for FD in routine operations.	dsalt-hp	
02/03/2011		9	Comment about events raised by declaring STR Unhealthy added at Step 5	dsalt-hp	
23/03/2011	3.1	10	Sequence (HFA8CCMZ) added at Step 12 to enable dump with 250ms integration time	dsalt-hp

		<i>The startracker CCD is downlinked in 100 blocks of 51 x 51 pixels. This gives dumps of 2601 pixels per command, which is well below the maximum number of 3056 pixels that can be dumped using a single command. The dump commands have been tagged with release times separating them by 36 seconds each, which leaves enough time for the internal telemetry buffer in the startracker to empty itself.</i>		
10.1		Load sequence HFA8CCMX on the Manual Stack		<input type="checkbox"/>
		When loading this command sequence on the Manual Stack, it will ask you to enter a value for the formal parameter inside the sequence, which is: - DumpSTR = The identity of the STR to be dumped (0=MainSRT, 1=STR-1, 2=STR-2, 3=RedundantSTR)		
10.2		Uplink entire block of commands (tagged with release times); note that the entire uplink will take 1 hour		<input type="checkbox"/>

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
	 and intermediate pixel values up to		
		Verify Packet Telemetry STR1 Val pix26 AMXLH074		AND=ZAAD0999
		<i>For STR2, monitor the following</i>		
		Verify Telemetry STR2 Init col i AMXKP075		AND=ZAAD3999
		Verify Telemetry STR2 Init row i AMXKR075		AND=ZAAD3999
		Verify Telemetry STR2 Val pix 1 AMXKS075		AND=ZAAD3999
	 and intermediate pixel values up to		
		Verify Telemetry STR2 Val pix 26 AMXLH075		AND=ZAAD3999
11		Retrieve the data		Next Step: 19
		<i>The data generated by the STR in response to the image dump command is stored in an internal telemetry buffer within the unit. Each packet of telemetry (corresponding to a single readout of the image dump subaddress through the ACMS bus) contains the time-tag for the CCD exposure which generated the image data, position of the first pixel of the image data packet and the output values for 26 individual pixels. The buffer is dimensioned for 128 packets (dump of the largest allowed window of 3056 pixels generates 118 packets). The buffer is scanned cyclically by the STR software and a new packet is returned after each interrogation of the image dump subaddress (SA14). The entire buffer is refreshed following the execution of each image dump command. The cyclic readout of the telemetry buffer is not synchronised with the refreshing of the buffer. As a consequence, the user must wait at least 32 seconds (128 ACC cycles) to make sure that the entire buffer has been downloaded.</i>		
		The following TM parameters point to single blocks of image dump data in the the SA14 diagnostic used in the procedure: STR1 - AMXX9074 STR2 - AMXX9075 Reconstruction of the CCD image for each commanded window by must carried out by post-processing of the data present in the DTM.

<p><i>TC Seq. Name :HFA8CCMZ (Dump all STRM (250ms)</i></p> <p><i>TimeTag Type: N</i> <i>Sub Schedule ID:</i></p> <p><input type="checkbox"/></p>				
12		Dump entire CCD (250ms integ. time)		Next Step: 13
		<p>The startracker CCD is downlinked in 100 blocks of 51 x 51 pixels. This gives dumps of 2601 pixels per command, which is well below the maximum number of 3056 pixels that can be dumped using a single command. The dump commands have been tagged with release times separating them by 36 seconds each, which leaves enough time for the internal telemetry buffer in the startracker to empty itself.</p>		
12.1		Load sequence HFA8CCMZ on the Manual Stack		<input type="checkbox"/>
		<p>When loading this command sequence on the Manual Stack, it will ask you to enter a value for the formal parameter inside the sequence, which is:</p> <ul style="list-style-type: none"> - DumpSTR = The identity of the STR to be dumped (0=MainSRT, 1=STR-1, 2=STR-2, 3=RedundantSTR) 		
		<p>***** NOTE *****</p> <p>This sequence has been specially prepared to provide an integration time of 250ms (i.e. raw value of last data word in TC=50), which is the same time used during normal STR operation in AAD</p> <p>[N.B. sequence HFA8CCMX has a 500ms integration time (i.e. raw value of last data word in TC=100)]</p>		
12.2		Uplink entire block of commands (tagged with release times); note that the entire uplink will take 1 hour		<input type="checkbox"/>

 Author: dsalt-hp

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		The data generated by the STR in response to the image dump command is stored in an internal telemetry buffer within the unit. Each packet of telemetry (corresponding to a single readout of the image dump subaddress through the ACMS bus) contains the time-tag for the CCD exposure which generated the image data, position of the first pixel of the image data packet and the output values for 26 individual pixels. The buffer is dimensioned for 128 packets (dump of the largest allowed window of 3056 pixels generates 118 packets). The buffer is scanned cyclically by the STR software and a new packet is returned after each interrogation of the image dump subaddress (SA14). The entire buffer is refreshed following the execution of each image dump command. The cyclic readout of the telemetry buffer is not synchronised with the refreshing of the buffer. As a consequence, the user must wait at least 32 seconds (128 ACC cycles) to make sure that the entire buffer has been downloaded.		
		The following TM parameters point to single blocks of image dump data in the the SA14 diagnostic used in the procedure: STR1 - AMKX9074 STR2 - AMKX9075 Reconstruction of the CCD image for each commanded window by must carried out by post-processing of the data present in the DTM.		
<p>TC Seq. Name :HFA8CCMY (Dump blocks STRM ima)</p> <p>TimeTag Type: N Sub Schedule ID: Formal Parameter List : STRConf Unit DumpSTR=</p>				
14		Dump multiple CCD blocks		Next Step: 15
		Note: The total number of pixels which can be dumped in a single command is 3056. If a larger area is to be dumped, then the area must be split into row and column areas totalling less then 3057, and Step 11 & 12 must be repeated for each of these areas.		
14.1		Load sequence HFA8CCMY on the Manual Stack		<input type="checkbox"/>

Dump STRM CCD Image

		Note: <i>The execution of the image dump command by the STR cannot be verified by monitoring the operating mode of the unit if the commanded integration time is less the ACC cycle. This is due to the fact that the CDI mode is transitory and the STR software returns to standby mode automatically so that for short exposures the mode change will not be captured by the ACC.</i>		
15		Retrieve the data		Next Step: 19
		<i>The data generated by the STR in response to the image dump command is stored in an internal telemetry buffer within the unit. Each packet of telemetry (corresponding to a single readout of the image dump subaddress through the ACMS bus) contains the time-tag for the CCD exposure which generated the image data, position of the first pixel of the image data packet and the output values for 26 individual pixels. The buffer is dimensioned for 128 packets (dump of the largest allowed window of 3056 pixels generates 118 packets). The buffer is scanned cyclically by the STR software and a new packet is returned after each interrogation of the image dump subaddress (SA14). The entire buffer is refreshed following the execution of each image dump command. The cyclic readout of the telemetry buffer is not synchronised with the refreshing of the buffer. As a consequence, the user must wait at least 32 seconds (128 ACC cycles) to make sure that the entire buffer has been downloaded.</i>
