Author: E. Picallo

Procedure Summary

Objectives

This procedure describes the steps to perform the measurement of the remaining mass of Helium in the HTT by using the DLCM device (Direct Liquid Content Measurement).

There are 2 DLCM in Herschel located at the bottom of the tank. They consist in a 10 W heater on each, CCU-A and CCU-B, used to produce a heat pulse in the superfluid helium in the HTT. The temperature elevation is measured accurately to estimate the remaining mass of Helium.

Summary of Constraints

DLCM in parallel on A and B branches should be avoided. i.e. it is recommended to use only one DLCM chain.

It is foreseen to use the DLCM only a few times during the mission, in order to limit the lifetime impact (each DLCM 200s x 10W heat pulse is equivalent to 0.5 day x 50mW of lifetime)

All instruments should be in Standby Mode and thermally stable with no L3He left inside the 3He coolers 3 hs before the DLCM.

During DLCM only acquire those CCU sensors needed for the measurement.

The DLCM operation will be done under ground visibility and only on ground request.

The DLCM parameters are:

- pre-monitoring phase is always fixed to 200 sec
- post-monitoring phase shall be set to 450 sec
- heating phase shall be set to 200 sec at BOL and can be reduced linearly to 60 sec (TBC) at EOL.

Spacecraft Configuration

Start of Procedure

CDMU in default configuration
LCL 37 (CCU A) and LCL 38 (CCU B) closed
CCU A and B configured "ON" and "VALID" on 1553 S/C bus
CCU A&B in monitoring mode
Instruments OFF or in STBY
Both the 3He coolers should be thermally OFF

End of Procedure

CDMU in default configuration
LCL 37 (CCU A) and LCL 38 (CCU B) closed
CCU A and B configured "ON" and "VALID" on 1553 S/C bus
CCU A&B in monitoring mode
Instruments OFF or in STBY
Both the 3He coolers should be thermally OFF

CCU DLCM
 File: H_FCP_CCU_DLCM.xls
 Author: E. Picallo

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Execute Telecommand CCUA_ArmDLCM <i>TC Control Flags :</i> GBM IL DSE -SY -- --- Subsch. ID : 10 Det. descr. : TC(8,4,8,1) for CCUA DLCM Arming	ZC0ZR999	
		Execute Telecommand CCUB_ArmDLCM <i>TC Control Flags :</i> GBM IL DSE -E- -- --- Subsch. ID : 10 Det. descr. : TC(8,4,8,1) for CCUB DLCM Arming	ZC0ZS999	
30.3		Verify the arming mode		<input type="checkbox"/>
		Verify Telemetry DLCMHArm_st A KM037300	= ON	AND=ZAZ9P999
		Verify Telemetry DLCMHArm_st B KM037301	= ON	AND=ZAZ9P999
30.4		Send TC to activate the DLCM sequence on CCU A and CCU B		<input type="checkbox"/>
		WARNING: DLCM arming will return to Idle mode if the "DLCM On" command is received too fast (<1 sec) or is not received within 180 sec.		
		WARNING: the telecommands CCU A DLCM ON and CCU B DLCM ON shall be issued without any delay (<500ms between these two telecommnads). To ensure that the two DLCMon commands (ZC0ZT999 and ZC0ZU999) are sent at the same time those TCs are blocked (encoded in the same CLTU).		
		Set the values of the following parameters to activate the DLCM operation: KP101300/1 = heating period between 0 and 200 sec KP102300/1 = post measurement period between 0 and 15 (measurements over P*30 seconds where P is parameter on command i.e. 0 to 450 sec). The Post measurement period needs to be maximum period (450 sec). The heated phase at begin of life (full tank) shall be 180 sec and can be reduced linearly to 60 sec (TBC) at the end of life (empty tank).
