

Update STR RAM ground image from memory dump
File: H_FCP_OBS_2845.xls
Author: lstefanov-hp

Procedure Summary

Objectives

This Herschel OBSM nominal procedure is used to perform an STR1 or STR2 RAM ground image update from memory dump. The procedure assumes the following STR RAM areas are dumped:

- TRAP_TABLE_RAM
- PAPPL_SW
- EAPPL_SW (including the Star Catalogues)
- Bad Pixel Table

The ACMS ASW provides a dedicated function for executing STR memory dumps. This function manages both the collection of data from the STR and the transmission to the ground through standard service 6 memory dump packets.

The memory dump is commanded using TC(8,4,130,125) and the memory locations content is received on ground in TM(6,6) packets.

The procedure assumes that the command stack has already been generated using the OBSM system and is ready for loading on the Manual Stack. The command stack generation activity is not covered by this procedure.

This procedure is called by the Herschel ACMS procedures H_FCP_AOC_4S51 and H_FCP_AOC_4S52.

Summary of Constraints

CDMU in Operational Mode

- ACC in Operational Mode
- STR NOT in INI Mode

- A maximum of 1536 32-bit words can be dumped with a single STR memory dump command
- The value of the 'STRSw Nr Words' parameter in the STR memory dump TC has to be a multiple of 12
- The STR memory is addressed in 32-bit words, while the address propagation is done at byte level. The start address of any service 6 TC shall to be a multiple of 4
- STR Main telemetry is part of the essential and mode telemetry packets. If the STR selected for dump is not configured as MAIN, a diagnostic telemetry packet has to be enable in order to verify the status of the physical unit.

Spacecraft Configuration

Start of Procedure

CDMU in Operational Mode

- ACC in Operational Mode
- STR NOT in INI Mode

End of Procedure

Same as start except:

- STR1 and/or STR2 RAM dump executed

5		MCS OBSM preparation for Image update in LIVE mode		Next Step: 6	
		Note: It is assumed that the OBSM application is already running and the OBSM Desktop is displayed on the MCS client. Starting the OBSM application is not covered by the current procedure.			
5.1		Select 'Image UPDATE' from the menu			
		Select the Image menu of the <i>OBSM Desktop</i> . From the Image menu, select Update . The 'Image Catalog' window opens.			
5.2		Select image to be updated			
		Select the image to be updated for the memory device STR1RMPG . The 'Image UPDATE' window opens.			
5.3		Start dump TM processing			
		In LIVE mode, processing of incoming real-time telemetry starts automatically after the image selection.			
6		Upload commands to dump the STR1 RAM		Next Step: 7	
		Uplink the ACXD1001 memory dump commands with ARM-GO			
		After successful execution of each command, 2 TM(6,6) packets shall be received on ground.			
7		Verify reception of TM(6,6)		Next Step: 8	
		Note: 2 TM(6,6) packets will be received for each memory dump command uplinked.

Update STR RAM ground image from memory dump
 File: H_FCP_OBS_2845.xls
 Author: lstefanov-hp

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch	AIT Comment
		Subsch. ID : 20 Det. descr. : TC_DUMP_STR_SOFTWARE This Telecommand will not be included in the export			
15		MCS OBSM preparation for Image update in LIVE mode		Next Step: 16	
		Note: It is assumed that the OBSM application is already running and the OBSM Desktop is displayed on the MCS client. Starting the OBSM application is not covered by the current procedure.			
15.1		Select 'Image UPDATE' from the menu			
		Select the Image menu of the OBSM Desktop . From the Image menu, select Update . The 'Image Catalog' window opens.			
15.2		Select image to be updated			
		Select the image to be updated for the memory device STR2RMPG . The 'Image UPDATE' window opens.			
15.3		Start dump TM processing			
		In LIVE mode, processing of incoming real-time telemetry starts automatically after the image selection.			
16		Upload commands to dump the STR2 RAM		Next Step: 17	
		Uplink the ACXD1001 memory dump commands with ARM-GO			
		After successful execution of each command, 2 TM(6,6) packets shall be received on ground.			
17		Verify reception of TM(6,6)		Next Step: 18	
		Note: 2 TM(6,6) packets will be received for each memory dump command uplinked.

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch	AIT Comment
		Verify Packet Reception Memory Dump - Absolute Addresses - SAU 8 Packet Mnemonic : MemDmpAbsAdd APID : 512 Type : 6 Subtype : 6 PI1 : PI2 :			
17.1		Check OBSM dump packet processing			
		Check that the OBSM is processing the incoming memory dump packets.			
18		Save merged image		Next Step: END	
		Save merged image with new ID .			
End of Sequence					
TC Seq. Name : OFCP284X (STR2 RAM GI update X) STR2 RAM Gnd image update in Retrieval mode TimeTag Type: Sub Schedule ID: <input type="checkbox"/>					
19		MCS OBSM preparation for Image update in RETRIEVAL mode		Next Step: 20	
		Note: It is assumed that the OBSM application is already running and the OBSM Desktop is displayed on the MCS client. Starting the OBSM application is not covered by the current procedure.			
19.1		Select 'Image UPDATE' from the menu			
		Select the Image menu of the OBSM Desktop . From the Image menu, select Update . The 'Image Catalog' window opens.			
19.2		Select image to be updated			
		Select the image to be updated for the memory device STR2RMPG . The 'Image UPDATE' window opens.

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch	AIT Comment
19.3		Start dump TM packets processing			
		Set retrieval start and stop time and start retrieval of TM packets using the PLAY buttons.			
20		Retrieve and process TM(6,6) packets		Next Step: 21	
		Use the STEP button to retrieve and process the TM(6,6) packets, packet by packet and starting from the time shown in the packet time field.			
		OR			
		Use the PLAY button to retrieve and process the TM(6,6) packets in automated mode. Pressing the PLAY button, the display will start to retrieve and process packets, starting from the time shown in the packet time field. This processing will stop automatically when a packet is received which creation time is greater than the one contained in the end time field.			
21		Save merged image		Next Step: END	
		Save merged image with new ID .			
End of Sequence					
End of Procedure
