

Monitor dump of PACS SPU RAM Ext memory area  
File: H\_FCP\_OBS\_4246.xls  
Author: lstefanov-hp

## Procedure Summary

### Objectives

This Herschel OBSM nominal procedure is used to perform the dump monitoring of one or several PACS SPU RAM Ext memory areas. It is used for both SPU SWL and SPU LWL subsystems. The memory dump is commanded using TC(6,5) and the memory locations content is received on ground in TM(6,6) packets.

The procedure assumes that the command stack has already been generated using the OBSM system and is ready for loading on the Manual Stack. The command stack generation activity is not covered by this procedure.

### Summary of Constraints

CDMU in Operational Mode

- PACS instrument in INIT mode (DPU ASW running)
- SPU ON
- DPU-SPU connection established

Memory areas are Dumped through TC(6,5); this TC will be delayed when there is an ongoing:

- TC(6,2) Load Memory Using Absolute Addresses
- TC(6,5) Dump Memory Using Absolute Addresses
- TC(6,9) Check Memory Using Absolute Addresses
- TC(8,4,1,1) Copy Memory

### Spacecraft Configuration

#### Start of Procedure

CDMU in Operational Mode

- PACS instrument in INIT mode (DPU ASW running)
- SPU ON
- DPU-SPU connection established

#### End of Procedure

Same as start

### Reference File(s)

#### Input Command Sequences

#### Output Command Sequences

OFCP424a  
OFCP424c

### Referenced Displays

ANDs      GRDs      SLDs

### Configuration Control Information
