

Start LOU Baffle Decontamination
File: H_FCP_SYS_LOU1.xls
Author: E. Picallo

Procedure Summary

Objectives

This procedure describes the steps needed to start the decontamination of the LOU Baffle in case they would be covered with ice and that would blur the path between the LOU and HIFI FPU

Summary of Constraints

By default the Lou Baffle Management function is running but the LOU Baffle controlling is disabled.

The LOU Baffle Management function shall be running before enable the LOU Baffle control.

The criteria to switch ON or OFF the LOU decontamination shall be determined by HIFI.

The maximum number and duration of ON cycles is limited by the following:

- never more than 20 hours of continuous operation
- at least 48 hours between two consecutive operations
- not more than 20 operations during in-orbit life

The required power for the decontamination is ~200W. Before starting it, the ground shall verify if there is enough available power regarding the power already used.

Never more than two heater lines shall be switched ON simultaneously

It is required to enable the TCS Diagnostic Packet in order to monitor the LOU median temperature parameter

Spacecraft Configuration

Start of Procedure

LOU Baffle Management function started
LOU Baffle Decontamination control disabled

End of Procedure

LOU Baffle Management function started
LOU Baffle Decontamination control enabled

Procedure Flowchart Overview

Start LOU Baffle Decontamination
 File: H_FCP_SYS_LOU1.xls
 Author: E. Picallo

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
Beginning of Procedure				
TC Seq. Name : HFYLOU1 (Start Lou Baffle Dec) Start LOU Baffle Decontamination TimeTag Type: N Sub Schedule ID: <input type="checkbox"/>				
1		Check initial LOU temperature		Next Step: 2
		At the beginning of the decontamination process, the initial LOU temperature should be in the range [130°K - 140°K]		
		Verify LOU THERMISTOR 1 Telemetry LouBaffleTemp1 ZMP17999	<= -133.15 degC >= -143.15 degC	AND=ZAZ9I999
		Verify LOU THERMISTOR 2 Telemetry LouBaffleTemp2 ZMP18999	<= -133.15 degC >= -143.15 degC	AND=ZAZ9I999
		Verify LOU THERMISTOR 3 Telemetry LouBaffleTemp3 ZMP19999	<= -133.15 degC >= -143.15 degC	AND=ZAZ9I999
2		Verify power margin		Next Step: 3
		The required power for the decontamination is ~200W. Before starting it, the ground shall verify if there is enough available power regarding the power already used.		
		Warning: Required S/C preconditions are TBW		
3		Verify the LOU Baffle Management function status		Next Step: 4
		By default, the LOU Baffle management function should be always enabled.		
		Verify LOU Baffle Management function status Telemetry LbSts DEN66170	= Running	AND=ZAZ9I999
4		Is LOU Baffle Management function running (yes/no)?		Next Step: no 5 yes 6
5		Start Lou Baffle Management function		Next Step: 6

Start LOU Baffle Decontamination
 File: H_FCP_SYS_LOU1.xls
 Author: E. Picallo

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		Call Procedure H_CRP_SYS_LOUM to Start the LOU Baffle management function		
		Execute Procedure: H_CRP_SYS_LOUM Start/Stop Lou Baffle Management function		
6		Request the LOU Baffle Status Report		Next Step: 7
		Call procedure H_FCP_SYS_LOUS to request the LOU Baffle Status Report		
		Execute Procedure: H_FCP_SYS_LOUS Lou Baffle Management Status Report		
7		Is the LOU baffle configuration correct (yes/no)?		Next Step: no 8 yes 9
		Check that the LOU baffle parameters, contained in the LOU Baffle Status Report, determined by HIFI, are correctly configured. The default parameter values are: - Low temperature Threshold : 220K = -53.15 C = 8480 RAW - High temperature Threshold : 230K = -43.15 C = 8816 RAW - Heater lines to be used are: LCL59&61		
		Verify Telemetry LouBafCtrlSts DEZA3170 = LouBCtrlStoppd		AND=ZAZ9I999
		The initial LOU control status must be disabled (by enabling it, the LOU decontamination will start)		
8		Modify LOU baffle parameters		Next Step: 9
		If another configuration is required, call to: H_CRP_SYS_LOUP to change the parameter values.		
		Execute Procedure: H_CRP_SYS_LOUP LOU Baffle Parameters Update		
9		Enable TCS Diag packet		Next Step: 10

Start LOU Baffle Decontamination
 File: H_FCP_SYS_LOU1.xls
 Author: E. Picallo

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
		It is required to enable the TCS Diagnostic Packet in order to monitor the LOU median temperature parameter.		
		Call procedure "Enable or disable the generation of an housekeeping or diagnostic packet" H_FCP_DHS_3033 1) Acquire the list of the current enabled TM packets 2) Verify if the TCS Diagnostic packet is enabled: TCS -> subtype=26, packet-ID=100 3) If it is disabled, enable it		
		Execute Procedure: H_FCP_DHS_3033 Enable or disable the generation of an housekeeping or diagnostic packet		
10		<i>Enable LOU Baffle decontamination</i>		Next Step: 11
		Send TC(8,4,118,1) Enable Lou Baffle Control to start the Lou Baffle controlling.		
		Execute Telecommand <p style="text-align: center;">EnableLouBaffleCtrl</p> <i>TC Control Flags :</i> <p style="text-align: center;">GBM IL DSE --Y -- --</p> <i>Subsch. ID : 10</i> <i>Det. descr. : Enable Lou Baffle control TC(8,4,118,1)</i>	DCP03170	
10.1		<i>Acquire the Lou Baffle Management Status Report</i>		<input type="checkbox"/>
		Call H_FCP_SYS_LOUS and verify that the Lou Baffle Control is enabled.		
		Execute Procedure: H_FCP_SYS_LOUS Lou Baffle Management Status Report		
		Verify Telemetry <p style="text-align: center;">LouBafCtrlSts DEZA3170</p> <p style="text-align: center;">= LouBCtrlStartd</p>		AND=ZAZ9I999
11		<i>Wait the requested decontamination time</i>		Next Step: END
		The duration of the decontamination cycle shall be determined by HIFI.
