

Change Ground Loss MOT entry parameters
 File: H_FCP_TTC_60GT.xls
 Author: E. Picallo

Procedure Summary

Objectives

This procedure describes the steps needed to modify the MINS_FROM_GROUND MOT entry parameters which are used by CDMU ASW to start the TT&C Loss Of Signal (LOS) reconfiguration procedure and to specify the time between consecutive TTC reconfigurations.

Summary of Constraints

The default MOT settings (check value= 58 hs, monitoring interval = 30 minutes and REP-number = 5) leads to detect the condition in which no ground contact has been established for more 60.5 hs and to perform a TTC reconfiguration every 2.5 hours (as long as the contact with the Earth is not re-establish).

The ASW function "On board Monitoring" shall be "Started".

It is worth noting that value to be used as the time interval between consecutive TTC reconfigurations shall be compatible with the worst case time needed by a Ground Station to perform a complete triangular sweeping procedure.

Spacecraft Configuration

Start of Procedure

CDMU in default configuration;

End of Procedure

CDMU in default configuration
 MINS_FROM_GROUND MOT entry parameters updated;

Step No.	Time	Activity/Remarks	TC/TLM	Display/ Branch
Beginning of Procedure				
<p>TC Seq. Name :HFR60GT (ChangeGroundLossMOT) Change MINS_FROM_GROUND Loss MOT entry parameters</p> <p>TimeTag Type: N Sub Schedule ID: Formal Parameter List : MonitInterval Interval= <dec> RepNumber Rep= <dec> CheckValue ChkValue= <dec></p>				
1		Verify the current MINS_FROM_GROUND parameters in the Monitoring Table (MOT)		Next Step: 2
		<p>Execute Telecommand</p> <p style="text-align: center;">ReportMonitList</p> <p>TC Control Flags :</p> <p style="text-align: center;">GBM IL DSE --Y -- ---</p> <p>Subsch. ID : 10 Det. descr. : TEMPLATE Report current monitoring list, TC(12,8) no appl. data</p>	DC51F170	
		<p>Verify the MINS_FROM_GROUND (Monitoring ID =0) current parameters:</p> <ul style="list-style-type: none"> - Check value - REP Number - Monitoring interval <p>The default values are the following ones:</p> <ul style="list-style-type: none"> - Check value = 3480 [min] (58 hs) - REP Number = 5 - Monitoring interval = 14400 [1/8sec] (30 min) <p>These value are used by CDMU ASW to start the TT&C Loss Of Signal (LOS) reconfiguration procedure and the time interval between to consecutive TTC reconfigurations.</p>		
		Setting the REP number to 5 and monitoring interval to 30 min should lead to consecutive TTC reconfigurations every [2.5 3] hours as long as the LOS counter is found greater than [60.5 61] hs (setting the check value 58 hs)		
2		Update MINS_FROM_GROUND parameters in the Monitoring Table (MOT)		Next Step: 3
		In the TC(12,5) it is necessary to update the Check-Value (minutes) , passed as a formal parameter to the sequence, against which the parameter MINS_FROM_GROUND (datapool ID 2082) will be compared.
